This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

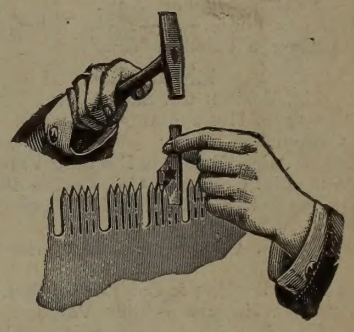
Maple Leaf Saw Set

MANUFACTURED BY

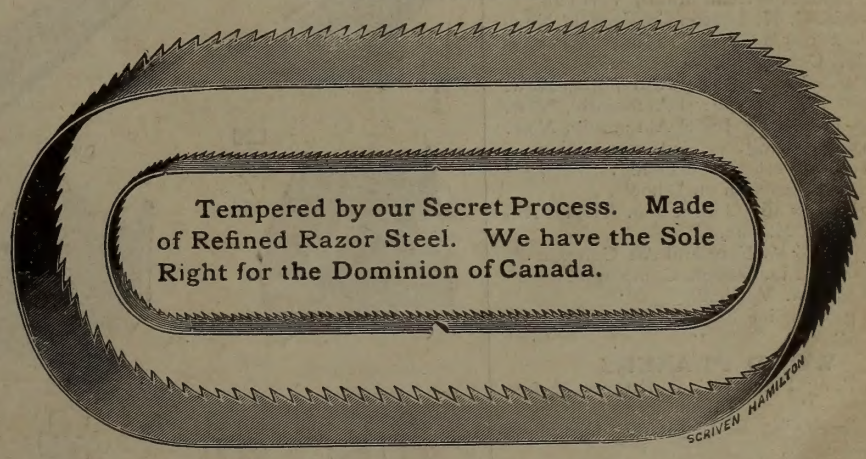
SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**



We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

ANNEXATION SALE

I am annexing a large new warehouse to my already spacious quarters. To save the expense and trouble of moving a portion of the following machinery, will sell at specially low figures.

BOILERS

72 in. x 189 in.—95—3½ in. Tubes, Horizontal Tubular.
30 in. x 180 in.—90—3 in. Tubes, Horizontal Tubular.
60 in. x 134 in.—21—4 in. Tubes, Horizontal Tubular.
76 in. x 186 in.—78—4 in. Tubes, Horizontal Tubular.
70 in. x 180 in.—120—3 in. Tubes, Horizontal Tubular.
48 in. x 160 in.—53—3 in. Tubes, Horizontal Tubular.
48 in. x 162 in.—51—3 in. Tubes, Horizontal Tubular.
44 in. x 166 in.—46—5 in. Tubes, Horizontal Tubular.
26 in. x 132 in.—14—3 in. Tubes, Horizontal Tubular.
52 in. x 154 in.—52—3½ in. Tubes, Return Tubular.
26 in. x 36 in.—15—3 in. Tubes, Economist Tubular.
30 in. x 72 in.—22—3 in. Tubes, Economist Tubular.
40 in. x 76 in.—34—2 in. Tubes, Semi-portable Tubular.
26 in. x 106 in.—14—3 in. Tubes, Fire Box.
72 in. x 192 in.—67—3 in. " "
37 in. x 68 in.—70—2 in. Tubes, Vertical Tubular.
28 in. x 44 in.—37—2 in. Tubes, Vertical Tubular.
30 in. x 96 in.—55—2 in. Tubes, Vertical Tubular.
19 in. x 44 in.—13—2 in. Tubes, Petrie No. 2 Tubular.
24 in. x 50 in.—31—2 in. Tubes, Vertical Tubular, New.
30 in. x 72 in.—43—2 in. Tubes, Vertical Tubular, New.
30 in. x 60 in.—43—2 in. Tubes, Vertical Tubular, New.
30 in. x 60 in.—54—2 in. Tubes, Submerged Tubular, New.
24 in. x 60 in.—31—2 in. Tubes, Submerged Tubular, New.

ENGINES

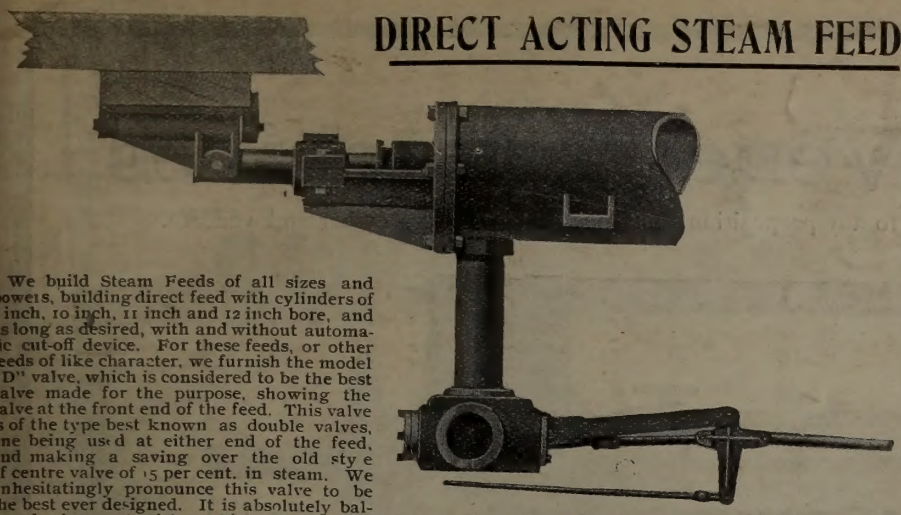
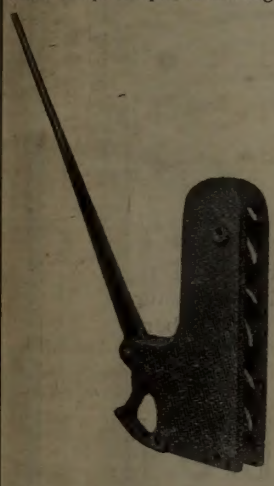
DIRECT ACTING STEAM FEED



We build Steam Feeds of all sizes and powers, building direct feed with cylinders of 8 inch, 10 inch, 11 inch and 12 inch bore, and as long as desired, with and without automatic cut-off device. For these feeds, or other feeds of like character, we furnish the model "D" valve, which is considered to be the best valve made for the purpose, showing the valve at the front end of the feed. This valve is of the type best known as double valves, one being used at either end of the feed, and making a saving over the old style of centre valve of 15 per cent. in steam. We unhesitatingly pronounce this valve to be the best ever designed. It is absolutely balanced, does not stick or kick, has larger steam openings than any other valve made for corresponding sizes of pipe, is economical in the use of steam, and handles the largest and longest feeds, under any pressure, with perfect ease and accuracy. We have also designed a new style of stuffing box which is a great saving in packing, and has an outer support, and is fitted with an oil well, filled with felt or waste which keeps the piston thoroughly lubricated.

Improved Double-Tooth or Boss Dogs



The accompanying cuts fully illustrate our Improved Double-Tooth Dogs with inserted teeth, making the teeth themselves of the finest tool steel. This allows them to be drawn to a slender point that will penetrate without crowding the log or board away from the carriage The teeth in case of bending or breaking can be replaced in a few moments, and without having to take the whole dog case apart — an operation requiring an hour or more.

These Double-Tooth Dogs are controlled by a wrought iron lever that can be bent to suit the operator, and this lever is held by a spring, positively in or out, so that there is no danger of the Dogs pushing out toward the saw. This method of holding the dogs has the merit of being permanent, the ordinary light pawls and connections commonly furnished for this purpose generally lasting but for a few days Our latest improved carriages are fitted with these dogs.

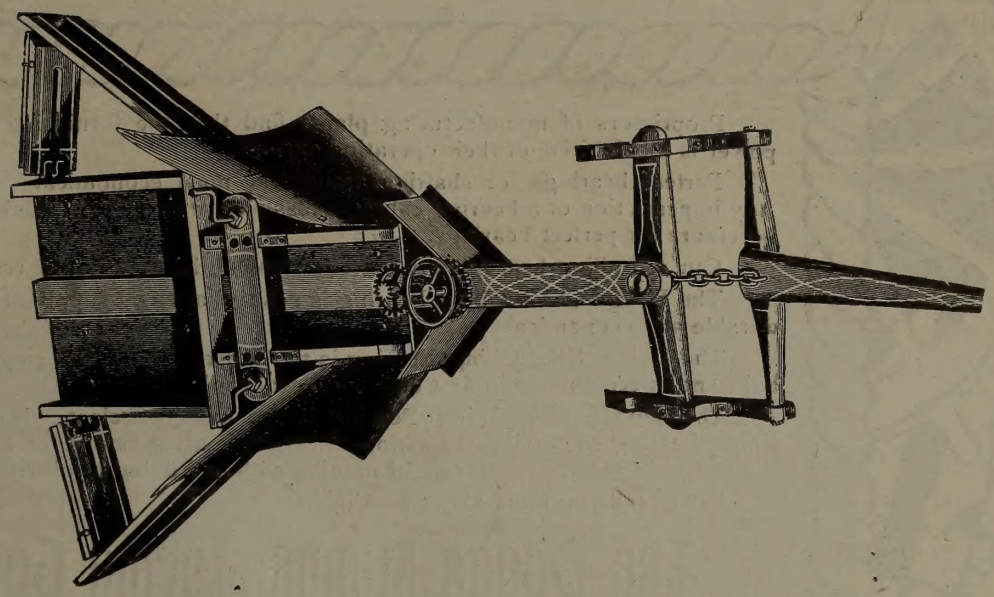
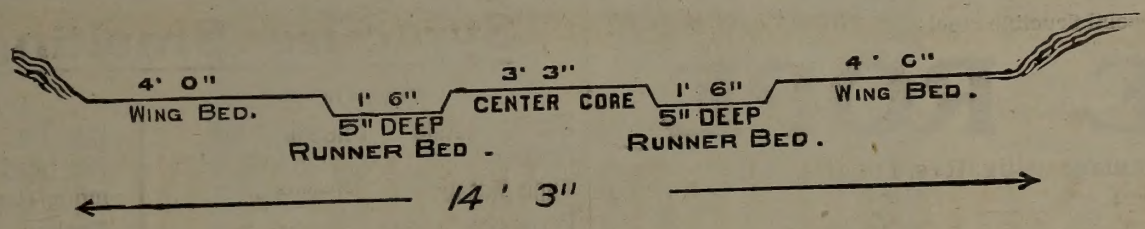
SNOW PLOUGH AND ROAD MAKER



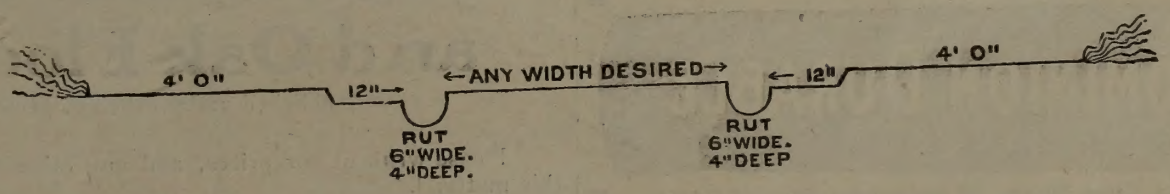
Not a Lumberman in Canada can afford to be without a Snow Plough, Rutter and Road Maker. The foremost and most enterprising men recognize this and have placed their orders



For use in snow and ice roads. Saves sleighs and harness. Endorsed by all lumbermen who have used them. Cuts six inches wider than sleighs. Rolls snow clear of track. Cuts off knolls, fills up holes. Levels roads perfectly, prevents sleighs from sluing. Cuts off dirt and manure, leaving it on bank. Ploughs up, rolls out, and pushes clear 12 inches of loose snow each time machine passes over road.

An attachment for extra team behind machine can be furnished when required. Made all widths.

The Wilkinson Plough Co., Limited, Toronto, control the rights of manufacture and sale. Write for price and description.



THE WILKINSON PLOUGH CO., Limited, TORONTO

Ploughs of all kinds. Land Rollers, Drag and Wheel Scrapers and all kinds of Cultivating and Stock Raising Implements

MAINTAINING YOUR BEARINGS

Proprietors of manufacturing plants find that the furnishing and distribution of power is a chief item of their operating expense.

Perfect bearings for shafting assure the most economical distribution of power. Any imperfection of a bearing causes a loss of power. Perfect lubrication is absolutely necessary for perfect bearings.

Our self oiling bearings are perfect. In continued use they remain perfect.

The Dodge Chain Oiling Bearing is positive as to oil supply and lubrication, cleanly, durable and economical.

The Dodge Ring Oiling Bearing is the most satisfactory ring oiling bearing ever built and is economical in first cost and cost of maintenance.

The Dodge Self Oiling Bearing is the most effecient, cleanly, convenient and simple bearing employing the action of capillary attraction ever offered to the public. These bearings have run for eight months with one filling of oil-run, perfectly too.

Let us tell you more about bearings.

THE CANADA LUMBERMAN

VOLUME XXIII. NUMBER 1. } TORONTO, CANADA, JANUARY, 1903 { TERMS, $1.00 PER YEAR Single Copies, 10 Cents

THE LATE WILLIAM MACKEY.

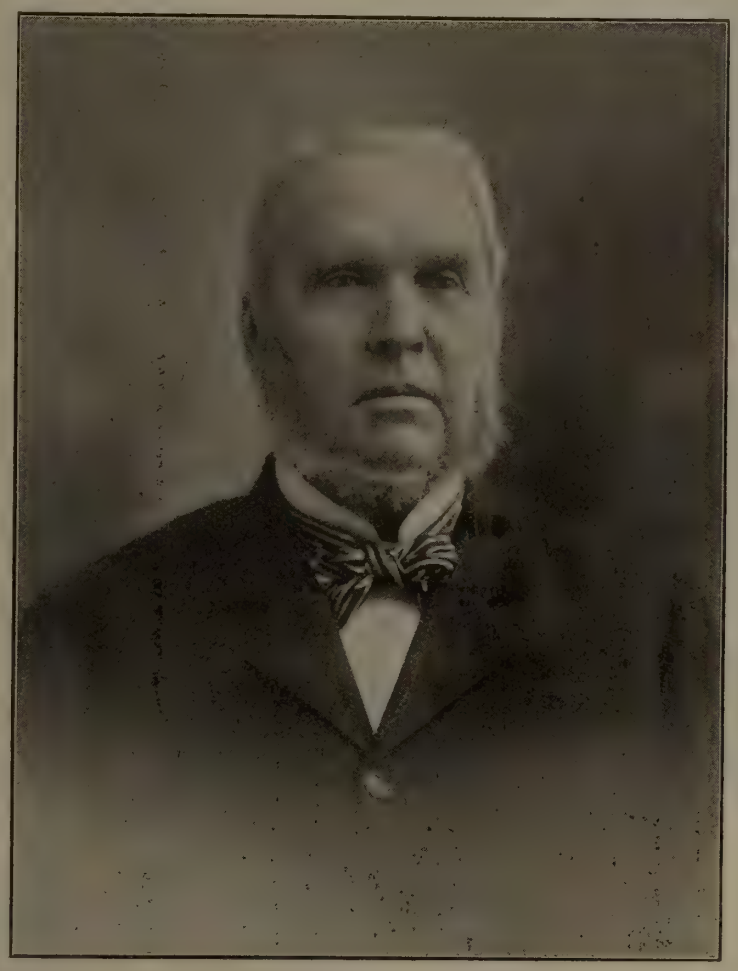
In the death of Mr. William Mackey, the lumbering industry of the Ottawa district, and by that is meant the district drained by the Ottawa river, loses a figure that has been prominent in it for over half a century. Less than a year ago deceased withdrew from active operations, when he disposed of his limits by public auction to Mr. J. R. Booth for the substantial sum of $655,000. Mr. Mackey's death will be sincerely mourned by thousands with whom he came in contact, for he was one of that stamp of men who made the world better for his residence therein. His was a life in which industry, integrity and intelligence, with just a suggestion of luck, or was it intuition, formed a perfect blend. Though dead he liveth, for his name will ever be coupled with all that is honest and upright.

In the year 1842 a raw Irish lad—one of a family—landed in Bytown. Sawdust filled the air, so to speak, and he forthwith determined to turn his attention to lumbering, while his father established himself on a farm near Perth. Plans to overcome the natural difficulty to the movement of timber offered by the Chaudiere falls were then being put into execution, and Mr. Mackey secured employment in the construction of the first government slide. His employer was Mr. George Buchanan, who had the contract also for the construction of the slides at the Chat's Rapids on the river above Ottawa. There Mr. Mackey was also employed with his brother. The latter and Mr. Buchanan were afterwards drowned at different times, but while engaged in the same task, removing a timber blockade in the river.

The Mackey Brothers secondly secured employment in improvement work on the Upper Ottawa under Hon. James Skead. About the year 1845 the latter branched forth into lumbering operations, retaining the services of the Mackeys. The subject of this sketch soon secured a position as foreman, and in less than five years he made an independent move. In 1850 his first raft of red pine was floated down the Ottawa from the Madawaska limits, through the slides which he himself a few years previous had helped to construct.

Shortly after this Mr. Mackey married and settled on a farm near Arnprior. About this time he also formed a partnership with the late Neil Robertson. For over 20 years harmonious and profitable business relations were continued, only to be dissolved by the death of Mr. Robertson.

Mr. Mackey's early operations were conducted on limits in the Madawaska country. He was an active figure in the lumber business in the heyday of the square timber trade. That was before the time of the extensive railway system in Canada and before the displacement of timber by steel in shipbuilding and other industries in Great Britain. Then it was found much more profitable to manufacture the towering pines into square timber, which floated down the mighty Ottawa, and found its way after many days to Quebec and aboard ship. Now the demand for board lumber is paramount, and the extension of the railway service makes it possible to transport the output of the saw-mill with comparatively little trouble.



THE LATE WILLIAM MACKEY, OF OTTAWA.

However, this is aside. Every summer rafts passed down through the slides, the name-marks including those of Mackey, Skead, Conroy, Gilmour, Currier, Poupore, Fraser, Aumond, Perley and Hurdman. Although Mr. Mackey engaged extensively for years in the production of square timber on his limits on the Madawaska and Anable du Ford, it must not be thought that he neglected the "board" end of the business. On his limit on the latter river he erected a saw mill at which he yearly manufactured stocks of board lumber. He was a shrewd and successful man, and his early training stood him well in after years. As this brief sketch shows, he arrived on the scene when the Ottawa lumber industry offered its greatest reward to the man who had the mental calibre. Mr. Mackey possessed that calibre, and with confidence in his own ability and the lumber industry as his safe capital, he turned his head and mind towards the trackless forests, leaving to others the attractions of town and city. How sound his judgment was, the succeeding years show.

Several times has the one story bearing on his discernment been told, but it will stand repeating. It is said that many years ago he purchased for a few thousand dollars a limit on the Anable du Ford river. That was the ruling price, but the far-seeing purchaser was not dismayed, as was his partner, when business depression brought a decline in the value of standing and manufactured timber. The partner asked to be relieved of his obligation, and granting him a refund of his money, Mr. Mackey secured entire control of the limit. The passing years proved the soundness of his judgment, for the market recovered itself and yearly he took valuable rafts of timber off the despised limit. It was included in the territory secured by Mr. Booth last February, the particular price paid for it being $65,000.

Mr. Mackey was content with the wealth he amassed in the lumber business, and therein he was wiser than some of his fellow operators, who, hoping to increase their gains by outside investments, lost all or a large share. It is said that Mr. Mackey once lost $15,000 in a mortgage investment, and there and then vowed to let well enough alone, and thereafter refrained from entrusting his wealth to other than the timber limit and the bank.

He was a public spirited citizen and a philanthropist. Time and time again has charitable work in Ottawa received an impetus from his purse. He was a devoted Catholic. On March 17th last, the natal day of his native country, a beautiful altar was blessed in St. Patrick's church, Ottawa. The cost, over $5,000, was defrayed by Mr. Mackey. Thus in his parish church stands a monument to his generosity and Christianity.

Mr. Mackey was married in the early fifties to a daughter of a prominent resident of Bytown, Mr. Peter Armstrong. She predeceased

him about nine years. He is survived by a grown up family of four sons and three daughters. Those resident in Ottawa are Mrs. St. Denis Le Moyne, Mrs. D'Arcy McMahon and Mr. Walter Mackey.

Probate of Mr. Mackey's will has been applied for. The value placed on the estate is $1,197,094, of which $1,060,395 is in personal property and $136,699 in real estate. To his bookkeeper, Mr. D. R. Mackenzie, he left the tidy sum of $34,000.

OHIO'S LUMBER INDUSTRY.

[By Our Travelling Representative.]

In common with the general prosperity of the entire lumber trade, the state of Ohio is experiencing quite a boom in this industry. Owing to their situation on

The "Lindsay" Unloading Canadian Lumber at Cleveland.

Lake Erie and splendid water facilities with Canada, Cleveland and Toledo easily outstrip all the other combined cities in the state. A large number of the retail and wholesale dealers in the state are about to enter the Canadian market for the first time.

As a general rule lumbermen are very hospitable, and in the travels of our representative over this state he met with much courtesy—incivility and curtness being rarely met with.

The Robt. H. Jenks Lumber Company, of Cleveland, are one of the largest dealers in yellow pine in the United States. They manufacture this article, having two mills in the south and making large shipments direct from their mills. They handle annually over 125 million feet. They ship lumber into Canada, making a specialty of large bills. Canadians visiting Cleveland are welcome at their head offices, 176 Euclid Avenue.

The opinion at Cincinnati is that the southern pine can be handled at that point much better and cheaper than "Johnny Canuck's" article, although there is nothing to equal the latter. Some of the southern pine, when dry, seems more like hardwood than soft wood. Among large dealers in Cincinnati are the Nicola Bros. and the R. E. Becker Company. The latter makes a specialty of hardwoods, both United States and Canada, and promise to be extensive operators on this side of the line.

One of the largest firms in Cleveland is the Owen T. Jenks Company. Their large offices on Superior Street show a very busy staff, and they are now coming into Canada, where eventually all the "good" lumbermen will go when they want good lumber. Our readers are referred to the advertisement of the Owen T. Jenks Company in this issue. They offer to buy the season's cut of any mill for spot cash. Their large yards on Merwin street are in charge of Mr. Charles M. Huey, a practical lumberman of large experience in this line. The yards are kept in splendid condition and show an enormous stock always on hand ready for immediate delivery.

The Advance Lumber Company, of 559 Rose Building, Cincinnati, is a very large concern, employing an immense staff. They also have an advertisement in this issue, which all lumbermen should read.

At Dayton there are two firms who are interested in Canada lumber, Gebhart & Co. (well-known to the Michigan lumber trade), and W. A. Drake, both extensive dealers and wholesalers.

C. G. & H. H. McLaughlin, at Columbus, as well as P.W. Snyder, are interested in Canadian lumber. The former are now advertising for Canadian pine, to be delivered at Erie, Pa. In the lively city of Akron, the Lyman-Allen Lumber Company and U. G. Frederick are all doing a thriving busines both in southern and Canadian pine. D. E. Holwick seems to be the leading dealer in lumber at Canton (the late President McKinley's home.) He is certainly doing a rushing business.

"What !—a lumber paper for a dollar a year ? We'll take it ! " greeted me at nearly all the offices. Many promised to look into the advertising proposition. If they advertise they are certain of good results.

The value of advertising in the Canada Lumberman for what they want to buy, or what they have to sell, is beginning to be recognized by the lumbermen across the border, and the fact is a plain truth that they can reach in this way hundreds of dealers and wholesalers, as well as retailers or mill men that would never otherwise know of their existence, no matter how large or how prominent they may be in the United States. Some firms say " We never advertise ! " but that does not say or prove it is best not to do so or that it is best policy to let those who do reap all the "cream" or benefit of the immense lumber resources of the country.

The "young Napoleon" of the lumber industry, Mr. Edward Hines, believes in advertising, as all progressive Americans do. His half page advertisement in this issue testifies to his business acumen and success,

Mr. R. H. Jenks,
President Robert H. Jenks Lumber Company and a Prominent Cleveland Lumberman.

backed and aided as he is by Mr. Wiehe and an enormous staff of able assistants.

Like the Hines concern at Chicago, the Cleveland Box Company can boast of its own buffet, where their employees are fed on the best the market affords, instead of being forced to go distances for an indifferent meal or to the low groggeries and dives which haunt the great industrial centres.

When you are in Cleveland, be sure and take a "trolley" to Painesville. There you will find the Coe Manufacturing Company's plant. They are the largest makers in the world of veneer cutting and drying machinery. Their half-page announcement in this issue speaks louder than words of the push and business energy displayed by this company.

Cleveland has always been a great lumber centre. The Cuyahoga river here runs into Lake Erie, winding snake-like through the very heart of the city, with a maze of docks, levees and piling grounds. Here are situated great piles of lumber owned by some of the different companies mentioned in this article, among which also are the Saginaw Bay Company (the head of which, Mr. Prescott, is well known in Canada); Colonial Lumber Company; The Nicola Bros. Company; Nicola, Stone, Meyers Company; Fisher & Wilson; Lake Shore Saw Mill & Lumber Company; C. H. Foote; Howard A. Singletary; Mills, Grey, Carleton Company; The Cuyahoga Lumber Company; C. H. Gill Lumber Company; Martin-Barriss Company; Potter, Teare & Company; M. G. Brown Lumber Company; and the Guy & Ralph Gray Company.

Besides the large lumber concerns Cleveland possesses a number of box factories. Very prominent among these are the Cleveland Box Company and the American Box Company, who are both very progressive and up-to-date. The Cleveland Co.'s advertisement in this issue offering to buy for spot cash twenty million feet of No. 4 and 5 grade lumber will show more than anything else the size of this company's enormous output. They have their own vessels on the lakes, and we have pleasure in presenting to our readers an illustration of the steamer "Lindsay" owned by the Cleveland Box Company, showing her discharging a cargo of over one million feet of Canadian pine lumber at the docks on Stone's Levee, which is the lumber district.

There is a club-room and cafe on the levee run by the Cleveland Board of Lumbermen as headquarters. Here they meet in the noon-hour and talk over prices and lumber prosperity generally.

The Cleveland-Sarnia Saw Mills Company have an office at Cleveland in the "Plaindea'er" building, their extensive mills being situated at Sarnia, Ont. They distribute immense quantities of Canadian pine throughout the United States, sending it far south, where nothing can replace the lightest of pines.

At Sandusky I found that the Sandusky Crayon Company were thinking of getting their box material from Canada. I could not catch the American Crayon Company's officers, but heard they used considerable lumber also. The former company have a fine plant on Water street. The Geo. R. Butler Company, of this place, make a specialty of hardwoods, and do quite a business in office and interior fixtures. The Sandusky Lumber & Box Company, Bennett Bros. Lumber Company, and Gilcher & Schuck do a big business, all handling considerable quantities of the Canadian material.

Chicago ranks first as the greatest railroad center on this continent, but Toledo comes a close second. The situation of the latter on Lake Erie, and the excellent docking and railway facilities, gives it a great advantage as a distributing point to all the middle eastern states. Among Toledo's biggest wholesalers, the Rib River Lumber Company, of which Mr. D. D. Flanner is president, do an immense business, having branches at Pittsburg, Pa., and Rhinelander, Wis., with main offices and extensive piling grounds at Toledo. This company's advertisement will be found in our weekly edition. They are prepared to buy the season's cut of any mill of pine lumber or white pine lath.

The Booth-Feilbach Column Company, which was

A Partial View of Stone's Levee, Cleveland.

formerly the W. S. Booth Company manufacturers of columns and capitals, are talking of entering the Canadian and foreign field. They are large users of lumber. The field in Canada is now open to wide-awake, energetic firms who can seize the golden opportunity.

The other Toledo firms who seem to be thriving are the Alvin Peter Company, Mitchell & Rowland, Kelsey & Freeman, Barbour & Starr and the Empire Lumber Company. A couple of other firms in this city are talking of disbanding.

MICH IGAN'S LUMBER INDUSTRY.

[BY OUR TRAVELLING REPRESENTATIVE.]

At one time the Saginaw valley held undisputed sway to the bulk of the lumber trade. Now the lumber industry (which is a different thing from the timber industry) is "all over the state," as a retail dealer told me.

After a journey to Chicago to interview the Hines concern and several other companies, I came back to Durand, Mich. Durand owes its existence in the center of the state to the fact that it is an important railroad center and the junction of three or four roads. To me it looked like a lumber center, yet I found but one firm of dealers there, McBride & Son, who are certainly doing a flourishing business. After telling Mr. McBride what I knew of Canadian lumber and what I didn't know of "Hoo-Hoo," we both came to the same opinion, i. e., that there was nothing to equal Canadian white pine.

From Durand I struck north to Saginaw, where I met such well-known lumbermen as Messrs. John J. Rupp, Lewis C. Slade, L. P. Mason, J. D. Draper and others, all of whom are interested in Canadian lumber. I visited every lumber firm in the city, among which were the Saginaw Lumber & Salt Company, who have extensive mills at Sandwich, Ont., the Morse Cedar Company, Booth & Boyd Lumber Company, Saginaw Mfg. Company, Briggs & Cooper Company, Limited, and N. N. Wright & Company, all of whom are doing a thriving business.

Among the manufacturers of mill machinery and mill supplies, the Morley Bros., the Wickes Bros., and the Allington & Curtis Mfg. Company are pre-eminent in their various lines, in fact, their goods are known in every lumber mill or camp on this continent.

From Saginaw to West Saginaw is only "over the river," but I was not able to catch many of the lumbermen at home. At Governor Bliss' office I learned that he was confined to his home—having just returned from Washington, where he had met with an accident. Taking a trolley I went down the fine main street of West Saginaw to the sash, door and blind factory of Thos. Jackson & Company. This concern is up-to-date and caters extensively to the foreign trade, using Canadian pine and getting the rebate on it by shipping it back through Canada. Mr. Jackson is able to compete for the world's trade by improved methods and improved machinery and watching the market closely. While I was there he figured on an order for seven thousand dollars' worth of doors, etc., for Cape Town, South Africa.

The Mershon, Schuette, Parker & Company lumber yards and mills are extensive. Mr. E. B. Mershon very kindly showed me through the immense plant of this company. Everything here is modern. The band re-saw establishment of W. B. Mershon & Company is really one of the most interesting things I saw in my travels. They are shipping their band saws to all parts of the world.

On the east side of the river Mr. Huss, at all times a very busy man, gave up a couple of hours to show me over the Lufkin Rule Company's establishment. This is the largest manufactory of rules, tapes, measures, etc., in the world.

I had a very interesting talk while in Saginaw with a Mr. O'Donnell, an old-time lumberman. He recalled with a sigh the good old days when the whole country for hundreds of miles around was a forest—now all cut down. He said that even ten years ago the hum of the saw-mill was heard all over the land—now there is not a large pine tree in sight. As the old gentleman very clearly explained to me what the city was like, I imagined myself once again on the upper Ottawa—and in my mind's eye I pictured the lumber camp, the log rolling, the drive, the immense rafts of logs and the ceaseless stream of timber going in one end of the mill to reappear as lumber at the other end. While I was at Saginaw, the Saginaw Valley Lumbermen's Association held a meeting at their club rooms, where freight rates and lumber values were discussed, probably with as much spirit as in days of yore.

A pleasant journey on the Pere Marquette Railway brought me to Bay City. Here there is one large manufactory of high-grade saw-mill and conveying machinery, the M. Garland Company. E. B. Foss & Company are the largest wholesalers of white pine and Norway lumber. Their extensive yards contain all grades of lumber. Among the other firms I saw were the Maltby Lumber Company, Campbell-Brown Lumber Company, J. & G. K. Wentworth, J. W. Thompson & Company, Eddy Bros. & Company, the E. J. Vance Box Company, and Messrs. Geo. D. Jackson, J. W. Ritchie, John Godkin, Henry B. Smith, J. E. Prohaska and Stephen Alyea, all of whom seemed to be prosperous and thriving. I had a talk with Mr. Wm. H. Sharp, who is one of the largest tug and bargue owners on the bay. He does a splendid business connected with the shipment of lumber and timber.

At West Bay City I found the Wolverine Lumber Company fully equipped for business, with a pushing energetic manager. I was pleased to see among the office staff of this company, as also in the office of Mr. J.W. Ritchie at Bay City, several Canadians who were evidently appreciated. From Bay City I went to Grand Rapids, where exist the greatest manufactories of furniture in the world; of course, this fact means that hardwoods are predominant. The Dennis Bros. have their main office here, with mills at Tonawanda, N. Y.

MRS. MCRLEY—AN AMERICAN LUMBERWOMAN.

W. O. Hughart, jr., buys basswood, ash and birch lumber from Canada. M.E. Stockwell and H.G. Dykhouse are doing a good business. On my list to call upon was the firm name of Morley & Son, situated in elegant offices in the Michigan Trust Building, (Grand Rapids' largest skyscraper.) I tapped softly on the door. In answer to "come in," given in a feminine voice, I found myself in the presence of a pleasant lady. "Could I see the proprietor or manager?" "Yes, please be seated, I am the person you wish to see!" was the reply.

Now, I was not at all surprised to see or meet with an up-to-date American business woman, but to meet with the first lumberwoman I had ever seen or heard of was just a little embarassing. However, I was soon set at ease by the lady in question, Mrs. C. S. Morley, explaining to me just why she was a lumber dealer. "Don't think I came into this business because I preferred it—but I was forced into it, and after I had been at it a little time I saw I could make a success of it," she said. "My father and my brother, before they died, were both lumbermen and it came to me quite naturally. I went into it unwillingly at first, but mastered the details." Then Mrs. Morley told me more in fifteen minutes about lumber than any lumberman had in an hour. She is the United States manageress of the Arthur Rushforth concern of Liverpool, Eng., who handle more mahogany than any other firm in the world. Mrs. Morley told me of her trip to Liverpool to attend the big auction sales. She has the distinction of being the only woman who ever attended a regular mahogany auction sale as a bidder. "At the sale I attended in Liverpool," she said, "some of the African logs sold for 96 cents per foot, inch measure. I made successful bids and secured some good mahogany, being treated by the Englishmen with the greatest courtesy."

Mrs. Morley spent three months in England and on the Continent. While in Germany she concluded arrangements to purchase all the soft wood in this country that is required by one of the largest manufacturers in Germany. Mrs. Morley has lived in Grand Rapids since she was a child. Her father, the late I. L. Quimby, established a saw mill and handle factory in that city, and she did clerical work in her father's office. This factory was one of the few that was kept running during the panic of 1893, only to become closed by litigation in 1900. Mrs. Morley then turned her attention to the lumber commission business and since that time she has been a familiar figure in the furniture factories and throughout Michigan. Mrs. Morley cut 32,773 feet of mahogany in one day of twelve hours at Grand Rapids, thus establishing a record.

Through the kindness of Mrs. Morley I was able to obtain an excellent likeness of herself as well as of a couple of car loads of mahogany logs she had just received. In the picture we herewith print Mrs. Morley will be noticed seated in her buggy. I can vouch that the corner viquette does not flatter this shrewd business woman.

Some lumbermen require considerable talk in order to induce them to advertise or subscribe. Not so with Mrs. Morley. Before I mentioned one word of the real object of my visit, her intuitiveness saw I was out for "business" and thus saved me a lot of talk. When Mrs. Morley came back from St. Louis she had orders for five car loads of mahogany. She knows what canvassing is, and she makes a successful bid for a large amount of business. And right here I want to thank Mrs. Morley's son for kindness shown to me. He is a splendid fellow, and I feel sure will make his mark in the lumber world.

Grand Rapids is the second largest city in Michigan, and really a lively place. Here was erected in 1834 the first saw-mill built in Michigan. Then the state was a forest wilderness full of Indians. Here it was that the well-known lumberman, Martin Ryerson, sr., married a squaw of the Ottawa tribe and later moved to Muskegon, making an immense fortune in lumber and timber. His son by a second wife has just given Grand Rapids a library building costing a quarter of a million dollars. The Grand River at one time was a great log-running stream. That day is past and gone never to return. Grand Rapids has nearly half a hundred or more furniture factories which cut up a great amount of hardwood in a year—some say over sixty million feet per year. Basswood is practically dead hereabouts, and they are turning to Canada for it.

Up at Muskegon, on the shores of Lake Michigan, I was told that this place once did more trade in the lumber industry than either Saginaw or Bay City. By the look of the deserted piling grounds it seemed somewhat that way. The Rogers Iron Mfg. Company are easily the largest manufacturers of saw-mill machinery in this part of the state. They have a splendidly equipped plant, which Mr. Rogers took me through. He is a very progressive business man.

Among Muskegon's lumbermen I visited the Thayer Lumber Company, Munro & Brinan, Langeland Mfg. Company, F. Alberts & Son, and Mann, Watson & Company, who are the largest concerns. Several smaller dealers complete the list in this once thriving timber centre. On the way up to this city I passed through miles upon miles of second growth, scrub oak and scraggy little poplars about the girth of one's wrist. Every piece of merchantable timber has been cut down. Some of the lumbermen are going to Canada for their stock.

(Continued next month.)

SHAVINGS EXHAUST SYSTEM.

By J.L. NELSON, in "Packages."

The proper way to construct the main suction pipe of a shavings exhausting system is to reduce the area, or diameter, of it from the fan outward, according to the area of the branches that are given entrance into it.

Carry the fan inlet area back until the first branch entrance is encountered, and then start the reducing directly behind this first entrance, and continue to reduce as long as there are branch entrances to make.

Always try to have the area at any and every

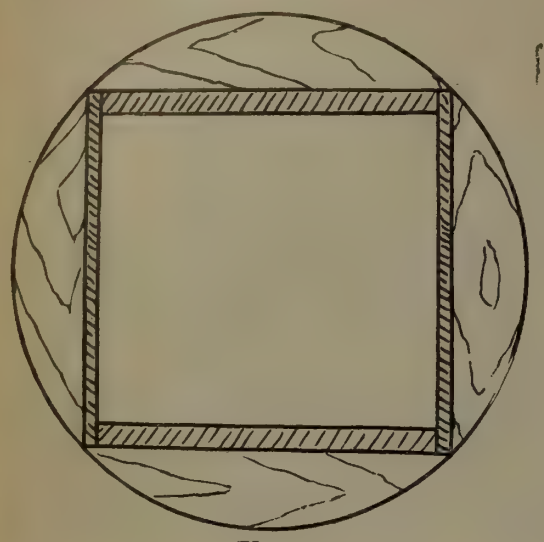


FIG. 1.

part of your main pipe equal to the combined areas of all the branch pipes that have entrance behind, or, at least, not more than ten per cent. greater (no less) than these combined branch areas, and if you have your main constructed in this manner, all else being right, there is little fear but that your system as a whole will be a success.

"But," said a friend to whom I made the above statements some time ago, "that is a bare statement, and I want to know how you reason it out, that it should be so. Why is it that an exhauster system with a reducing main suction pipe will, as you claim, be much more efficient than a pipe that carries its full exhauster inlet area back through the full length of the factory, so far as there are branch entrances to be taken?"

This, to me, seemed a very thoughtless question to ask, and had the friend mentioned given the subject a few moments' serious thought, he would, undoubtedly, have deduced more than one very good and sufficient reason why it should be so. Anybody, and almost without preliminary thought, will grant that a river bed must increase in holding capacity according to the number of branch streams that flow into it, in its course downward towards the sea, and what is more natural and reasonable, outside of various other reasons that will be mentioned later on, than that a river of air, such as that which is sucked through an exhauster system in operation, should require increased area of piping to accommodate the increased flow given by the branch streams of air that join with the main draft in its course towards the exhauster.

This seems so obviously correct that one would wonder that anyone would be so thoughtless as to construct a main suction pipe of the same diameter throughout its full length, and yet I have seen this very thing done more than once.

Not more than a three-hours' run from where I now sit, and in the very large planing mill of one of the most extensive lumbering concerns in this country, two 55-inch single exhausters are installed, and both, to the great detriment of their efficiency, are connected to piping constructed so that it carries its one diameter back through that portion of the mill in which the respective exhausters are doing duty. I have, more than once, figured that either one of these two fine 55-inch exhausters, with their inlet diameter of 22-inches, and area of 280 inches, should, under ordinary circumstances, be able to easily accomplish all the exhausting to be done in that factory, and I would guarantee to put in a system of piping which, connected to only one of the present fans, would do more and better work than both exhausters are now doing, handicapped, as they are, by their nonsensical piping connection.

Not only no the main suction pipes connected to these two struggling exhausters carry their first diameters back over their full length, but, actually, their initial area is hardly more than half of what it should be, to be equal to that of the exhauster's inlet. In putting in these systems, it was evidently decided by the management, or by the mechanical genius who had charge of the construction, that galvanized iron piping would prove too expensive a proposition, and so the less costly wood was requisitioned for the purpose. Of course, to build up a round, drum-shaped, wooden pipe to 22 inches of diameter shown by the exhauster inlet, was out of the question, owing to the costliness of such a construction, and so an ordinary square box was decided upon.

Now an ordinary square box, if well constructed, and if properly constructed, does not, by any means, make a bad makeshift for a while. For a time, it is probable that a wooden pipe, properly constructed, will give just as good and efficient service as a galvanized iron pipe. The chief objections to the wooden pipe are that it does not stand the wear and tear well, and, also, that it is very prone to leakage. Moreover, its maintenance is very expensive as compared with the galvanized iron, once installed. But when a faulty square wooden pipe is connected up to an exhauster as faultily as the wooden pipes above mentioned were to these two 55-inch fans, there is little wonder that inefficiency is the result.

The entrance into these exhausters, as provided by the manufacturer, is, as has already been noted, 22 inches in diameter, but this entrance is circular, and the genius of the mill was here confronted with a very serious question, viz., how to connect his square box main up to the round inlet in the exhauster. What is more natural than that the genius should solve the question by deciding to "square a circle," by fitting four segments of 11-inch radius, with flat bases, into the fan inlet in the manner shown at Fig. 1, thus accommodating the exhauster inlet to his wooden pipe.

This was done, and, as a result, the efficiency of the exhausters was, right at the base of the system, practically cut in two, even had the main from there outward been properly constructed, reducing according to the branch entrances taken. The area of the inlet provided by the manufacturers of these exhausters was 380 square inches, but now these splendid 55-inch machines which were, and are, quite capable of handling the original volume of draft for which the manufacturer had provided accommodation, were bridled to such an extent that their available area of inlet was just equal to that which is provided for a 40-inch exhauster, having a 16-inch circular inlet of only 200 square inches area. In fact, two 40-inch exhausters, properly connected to this wooden pipe, would have been just as efficient as the two 55-inch exhausters could possibly be, connected as they are, and I do not doubt that two 35-inch fans, with only a 14-inch diameter inlet, and suitably connected to a galvanized iron main, properly constructed, would be just as efficient in this mill, upon less than half the power, as the two bridled, and badly handicapped, 55-inch machines.

My friend, before mentioned, asked me to explain to him why, in the interests of absolute efficiency, it is necessary to reduce the main pipe as it retires from the exhauster, according to the area of the branch pipes that are given entrance into it.

To do this effectively, I will introduce the sketch given below, of a 22-inch diameter galvanized iron pipe which carries a parallel area throughout its full length. The size of exhauster to accommodate an inlet of this diameter is a 55-inch, which we will attach to the left end of the pipe. The area of this pipe is 380 square inches, and the direction of

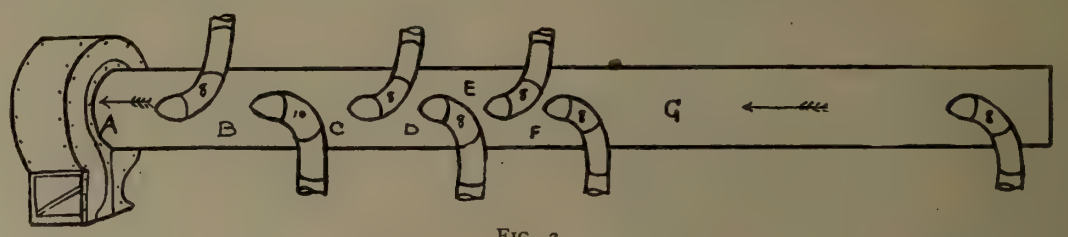

FIG. 2.

draft through it is, of course, toward the exhauster, as indicated by the arrows.

Now here we have an exhauster with a 22-inch inlet, to which is attached a galvanized iron pipe of the same diameter throughout its full length. This inlet and pipe have areas of 380 square inches and we have given entrance into it one 10-inch branch of, say, 80 square inches area, and six 8-inch branches, each of 50 square inches area, making, in all, a branch inlet area equal to the main pipe and exhauster inlet areas.

We will suppose the exhauster, or, rather, the fan, is running at a speed of 1,000 revolutions per minute, and that the speed of draft through the branches and main is 150 feet per

second, this being the proper speed to give the branches the lifting power to lift the shavings from the machines on the floor below.

Now it is evident that at A there is a certain suction power, or pressure in the main pipe. The volume of air passing through the main at this point, A, is equal to the volume of air coming into it from all the branches combined. This is quite evident. Between A and B there is an 8-inch branch inlet, with 50 square inches of draft of equal density to the draft in the main at A gaining entrance, and so it is evident that, although at the point B the same area of draft is passing through the main as at A, yet the volume of draft here is only equal to the volume let into the main by the balance of the branch draft behind B. At A, so to speak, the volume is 380, while, owing to the relief offered by the first 8-inch branch, at B the volume is reduced 50 degrees, making it 330.

As the point C, following the same line of argument, the volume of air has been relieved by the 10-inch entrance to the value of its area, which is equivalent to 80 degrees. Thus, at C the volume of air is only 380 minus 50 minus 80 or 250, as compared with the 380 degrees at A, and so on down the line, till we come to the point G, where the volume, or density of the draft is only 380 – 50 – 80 – 50 – 50 – 50 – 50= 50, as compared to the 380 degrees of density at the point A.

As will be seen by this, all the air that is passing through the 22-inch main pipe at the point G is that which gains entrance into it through the 8-inch inlet behind this point. The speed of draft through this far end branch, we will say, is equal (although it is not, being so far away from the fan) to that through the branches in front of it, that is, 150 feet per second. Now imagine this one stream of air, loaded with wet shavings from a heavy surfacer, being discharged into this 22-inch space which has an area more than seven and two-thirds times as great, and tell me where those heavy water-laden shavings will go to.

Will they fly along to the fan carried upon the wings of a draft seven and two-thirds times less powerful than that which carried them up into the main, or will they drop and lodge in the main at G, owing to the fact that the draft here is not forceful enough to carry along to where they will come within the added strength of draft given in the main by the entrance of the next branch nearer to the fan?

If these shavings were of feather weight, such as come of a very high speed, slow-feeding machine, working upon kiln-dried stock, there is a possibility that they would be drawn into the exhauster, but as for heavy, water-laden shavings coming from a fast feeding surfacer, or matcher, there is no possible doubt but that they would, after using the forceful influence of the branch inlet, drop to the bottom of the main at G and stay there until pushed along by hand.

This, I think, is all very evident, and in the wooden pipe system I have already referred to, this clogging of shavings at the tail end of the system was constantly happening. For years it has happened regularly whenever any heavy cutting was to be done on the tail end machines, and to-day it is doubtful if the people who run this mill know just why their pipes do clog.

And now, if my readers will apply the same line of reasoning as I have adopted above to a reducing main, they will, no doubt, readily see why manufacturers who contract for the installation of complete systems of piping always reduce according to the area of the branch pipes that gain entrance into the main.

EXPORT OF BRITISH COLUMBIA SHINGLES.

With a view to ascertaining what proportion of the British Columbia shingle product is exported to the United States, the CANADA LUMBERMAN communicated with some of the leading manufacturers, whose replies are given below :

SPICER SHINGLE MILL COMPANY, LIMITED, Vancouver : As to the quantity of shingles shipped from British Columbia to the United States, I can state that after enquiring and looking into this matter, I find that during the last two or three years about 10 to 15 per cent. of the shingle output has gone to the United States.

As to the relative cost of labor, timber and mill supplies between British Columbia and Washington, it may be true that on account of some Japs and Chinese being employed here in the shingle mills, that the cost of labor is probably a little less than in Washington. It must be remembered, however, in this connection that the Chinese and Japanese do not do so much work as a white man, and so far as the latter are concerned, we certainly pay as high wages here to white labor and inexperienced mill men as they do in Washington. Shingle bolts have always been at least 25 per cent. lower in Washington than here, and shingle logs are about the same. In regard to mill supplies, it is a well known fact that the Washington mills have a considerable advantage over us in this respect. I should say that there is a difference of from 15 to 25 per cent.

The reason why the British Columbia mills sell the few shingles in Washington which they do, is altogether on account of the superior quality as compared to the Washington article, the dealers in the United States being willing to pay about 25 cents a thousand more for our shingles than for the Washington product.

E. H. HEAPS & CO., Cedar Cove: We are sure that the proportion of the British Columbia shingle product that is shipped to the United States is less than one-third for the whole year, and at the present time we do not think it would amount to one-fifth. We might also say that the cost of labor and timber is about the same in British Columbia as in Washington, and that the reason why we are able to sell in the American market is because our shingles are of a superior grade, and many of the American buyers prefer them even at an advance of 25 cents per thousand.

HASTINGS SHINGLE MANUFACTURING COMPANY, Vancouver: We are satisfied that not one-sixth or one-eighth of the shingle output is shipped into the United States. We are satisfied that our Canadian trade is gaining so much in Manitoba and the North-West and requiring our product in the way of shingles and lumber, that the present capacity would just about supply our own market if we had it to ourselves, and we would not require to ship into the United States. It is an injustice to the Canadian manufacturers of lumber and shingles that the Americans are allowed our market free of duty, while we are handicapped by a duty in the American market.

ROBERTSON & HACKETT, Vancouver: We have not up to the present time sent any shingles into the United States. The timber may be cheaper here, but the cost of labor is the same as in the State of Washington.

BRUNETTE SAW MILL COMPANY, LIMITED, New Westminster: We are not in as good position as some Vancouver makers to say what proportion of the British Columbia cut of shingles goes to the United States. Our shingles are preferred in the States on account of their better quality, greater care being taken in their manufacture.

PACIFIC COAST LUMBER COMPANY, Vancouver: With respect to the statement made by the Mississippi Valley Lumberman to the effect that two-thirds of the shingle product of the British Columbia mills now goes across the line into the United States. This statement is utterly untrue, and the writer who penned it is evidently not a worthy journalist. We do not know that this magnified self-importance is likely to do any harm to the British Columbia mills, we fancy they could all manage to live without any trade at all from our friends to the south.

The facts as we know them are: Probably more shingles have been shipped over the line this year than last, they have been going at the rate of 60 million shingles a year. The capacity of all the mills will probably run about 600 million, so that instead of two-thirds, one-tenth of the entire cut would be the very outside limit of these shipments.

Further, what shingles are being shipped from here in a way do not compete at all with the shingles made in Washington, as the same class of shingles is not made on both sides of the line. On our side upright shingle machines alone are used. These machines are comparatively slow-running and turn out a well-made shingle; then our packing and sorting is more carefully done, so that our shingles, made from exactly the same timber, are worth from 25 to 50 cents more per thousand to the consumer than the Washington product. Across the line the method of manufacture is different, fast running horizontal machines are used, big cuts and low cost of production is the aim, quality and everything else is sacrificed to this, the result is a very shabbily made article that will not command in any market the same price as our shingles. Any manufacturer in Washington State will acknowledge this. No matter what the Mississippi Valley Lumberman may say, we cannot begin to make shingles as cheaply as our neighbors immediately to the south are doing. We are now paying from $7 to $8 per thousand feet for cedar logs; they may have to pay on the average about one dollar more, so that in the cost of timber we might have an advantage of ten or 12 cents per thousand, but this is much more than overbalanced by the greater cost of manufacture in our case.

The only thing that makes the trade at all possible is the fact that we produce a better finished article. If the Washington mills produced the same quality of shingles as are produced here and could supply the demand on their side of the fence, not a shingle would be shipped from here. Any that are shipped go to such markets in the United States as demand a well made article and are willing to pay a fair price.

NOVA SCOTIA LUMBER ASSOCIATION.

A large number of the leading lumbermen of Nova Scotia met at Amherst on December 8th and decided to organize an association to be known as the Nova Scotia Lumber Association. Officers were elected as follows: President, Alfred Dickie, Stewiacke; vice-president, J. H. Livingston, Wentworth; treasurer, Ray Kent, Truro; secretary, D. G. McDonald. The following, with the above officers, compose the executive: Chas. J. Willis and N. A. Rhodes, Amherst; Henry Hunter, Wentworth; T. G. McMullin, Truro, and J. D. McGregor, New Glasgow. A request has been sent to H. J. Logan, M.P., to arrange a meeting of the Intercolonial Railway authorities to confer with the Executive at their next meeting in reference to freight rates

---

A curious freak of nature was discovered recently at High Wycombe, Eng. A quantity of Canadian birch timber arrived at one of the chair factories there, and in the centre of one piece 3 in. in thickness there was found a young birch tree 2½ in. in dismeter, which had escaped the saw. It had enjoyed an independent growth, and it is supposed that years ago a seed fell into hollow part of the old tree and developed into a sapling, which forced its way up through the trunk of its parent. The hollow was completly filled a distance of several yards. We are told by Timber that this curiosity is to be preserved.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

Copy, Weekly and Monthly, One Year, in advance . $ 1.00
One Copy. Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE TIMBER INDUSTRY IN 1902.

The timber and lumber industry, now classed in Canada second only to agriculture, made rapid strides during the past year. Complete statistics are not available, but the quarterly statements of exports that have been compiled show an increase of large proportions in the volume of business. The condition of the industry has been very healthy; manufacturers, with scarcely an exception, have been enabled to operate their mills to the maximum capacity and to dispose of their output at very satisfactory prices. Every class of lumber, from the highest grade of white pine to low grade hemlock and cedar, has been in good demand.

The prosperous times in the lumber business have come coincident with an inadequate supply of labor. The industrial development of Canada has proceeded so rapidly of late years that the demand for labor has been greater than the supply. Canada has not alone suffered in this respect, however, as in a lesser degree similar conditions have been experienced in the United States.

Some kinds of lumber, mainly white pine uppers, sold at record prices during the year. The supply of the better grades of white pine is gradually diminishing, and as there has not yet been found a satisfactory substitute, it is quite probable that prices may find a still higher level. What prices will rule throughout the coming year cannot be foretold, but it is a plain fact that notwithstanding the smaller percentage of lumber now used in the construction of buildings, the consumption seems to be gradually overtaking the production; in other words, at the present rate of consumption the world's supply of timber will sooner or later become exhausted.

The position held by Canada in respect to the timber supply is very forcibly stated by Mr. J. C. Hawkshaw in his presidential address to the members of the Institution of Civil Engineers of Great Britain. He points out that in Europe there are only five countries which export timber, and the amount exported by these is nearly two and three-quarter million tons short of the total amount required in Europe. Germany, with 26 per cent. of its area under forest, imports nearly half as much as Great Britain, which has only 4 per cent. of its area under forest. France, with 18 per cent. under forest, imports one and one-quarter million tons of timber annually. The timber imported into Great Britain in 1901 was valued at $125,000,000. As Europe cannot now supply its own wants, and as New Zealand has already exhausted its kauri pine forests, Mr. Hawkshaw concludes that Canada is the only country from which Great Britian can reasonably expect to secure a supply of timber.

Some calculations by Mr. Hawkshaw as to the consumption of timber by the railroads of Great Britain are interesting. He estimates that there are in use about 90,000,000 sleepers, and that the annual consumption for renewals is 3,750,000, in addition to which much timber is used by the railways for fencing, telegraph and signal posts, and other purposes. We quote from his address: "For the last thirty years it has been said that steel would shortly be adopted in place of wood for sleepers, but although we can make our own steel and must import our timber, this has not come to pass. If we consider the sleepers laid on all the railways of the world, the number would not fall far short of 1,495 millions, and a low estimate of the value would be $900,000,000. Might it not be well to inquire whether the supply of the material was likely to continue to be equal to the demand?"

These remarks indicate a proper recognition of the fact that the timber supply will not be everlasting unless more important steps are taken to perpetuate it. Allowing for all probable advancement in this direction, it seems extremely likely that the tendency will be to place a higher value on the product of the forest.

Mindful of the position borne by Canada in respect to the world's timber supply, we modestly predict for 1903 a continuance of the prosperous conditions which existed in the year just closed. There may not be the enormous demand that has been the feature of the past season, but there will doubtless be found a market for all the lumber manufactured, and at profitable figures.

The prosperity of the lumber trade has been shared by the CANADA LUMBERMAN. Most hearty support has been accorded to the journal, and to our readers, advertisers, and lumbermen in general, we extend our best wishes for a Prosperous New Year.

LUMBER TRADE ORGANIZATION.

Two important organization movements affecting the lumber trade have been taken during the past month. The first is the formation in the United States of a National Association of Lumber Manufacturers. This association proposes to include in its membership all associations of lumber manufacturers 75 per cent. of whose membership shall be actual manufacturers, each association to be allowed representation in proportion to the quantity of output. The policy of the association has not yet been clearly defined, but sufficient is given out to indicate that one of the main objects will be to protect the lumber interests from tariff legislation. At the organization meeting, following quotations from a paper by Mr. John Charlton, M.P., on "Reciprocity with Canada," a resolution was unanimously adopted that the association is opposed to any revision or modification of the existing tariff on lumber. Of more local interest is the recent formation of an association of lumbermen in Nova Scotia, of which Mr. Alfred Dickie has been chosen president. This, to our knowledge, is the first attempt to organize that has been made by the lumber trade of Nova Scotia, and it is our earnest hope that an influential and useful association will be the outcome. There is great need not only for the formation of provincial associations, but also for the unification of the lumber interests of Canada, as has been done in the United States.

FORESTRY EDUCATION IN ONTARIO.

The necessity for providing facilities for the study of forestry has been recognized by the Ontario Government for some time, and if we are to judge by the trend of recent events, a department for that purpose will soon be established in connection with one of our universities. The proposition which seems most likely to be adopted is to found, in connection with the University of Toronto, a school on the general plan of Yale and Cornell Universities in the United States, provision being made for a summer course of six weeks at the Ontario Agricultural College, Guelph, where a tract of land would be set apart for the practical work of the students.

It is very desirable that the course should in some way be connected with the Agricultural College at Guelph, as the attendance at that school is comprised largely of farmers' sons, who would be especially benefitted by instruction in the growing and preservation of trees. The objection to establishing the entire course there is that without a large additional expenditure the student could not receive tuition in all the necessary subjects, such as botany and natural history, which are now taught at Toronto University.

A claim to the proposed school is advanced by Queen's University, of Kingston. The friends of that institution contend that the new engineering building was designed especially for a department of forestry at the request of the Ontario Government. However that may be, it is hoped that a thoroughly equipped department will be immediately established at one of the colleges, and later this branch of study may be extended to other schools.

What Ontario proposes to undertake in the direction of forestry education should be followed by the other provinces of the Dominion. In this regard we would not exclude Manitoba and the Territories, as although frequently spoken of as the "prairie provinces," investigation made by the Dominion Superintendent of Forestry and other experts shows that great benefit would accrue to the settlers by the cultivation of trees in suitable districts.

The function of a forestry school, broadly speaking, may be summed up as reforestation and preservation. Instruction in the latter should eventually be of great benefit to lumbermen, by placing at their disposal trained foresters who would undertake the operation of timber limits upon systematic, economical methods. The necessity which exists for such working plans was emphasized in papers read before the Canadian Forestry Association at Ottawa last spring by Messrs. McGibbon and Cary, both practical lumbermen. In the United States the graduates of the forestry schools are well paid, and the demand for experts is greater than the supply. The prospects of securing remunerative employment for the graduates are therefore promising, and should be sufficient to induce many of our young men to fit themselves for the work.

MR. HARLAN P. HUBBARD.

We take pleasure in presenting herewith a portrait of Mr. Harlan P. Hubbard, who was recently appointed sales agent for Canada for the well known firm of E.

MR. H. P. HUBBARD,
Canadian Representative of E. C. Atkins & Company.

C. Atkins & Company, of Indianapolis, Ind., manufacturers of all kinds of saws and saw tools.

Mr. Hubbard is a young man of fine address and great energy, and is specially qualified for his new duties, having had years of experience in the manufacture of saws. He comes of a well known family of Pittsburg, Pa., his father and uncles having for years been in the saw and axe business in that city, and he having learned the trade under them at that place.

He was for several years past superintendent of the Chicago factory of the Simonds Manufacturing Company, where he was very successful, and well liked by everyone connected with the establishment, and upon his resignation he was presented with a beautiful gold watch and chain by the men.

Mr. Hubbard was made a member of the Concatenated Order of Hoo-Hoo at the Milwaukee Annual, September 9, 1902, and has recently been appointed vicegerent for Canada by the new snark.

THE NEWS

—Lecours & Bourget, lumber merchants, Levis, Que., have registered partnership.

—William Lueck has disposed of his saw mill at Williamsford, Ont., to Lueck Bros.

—Evans & Farrell, saw millers, Low, Ont., have been succeeded by Webb & Farley.

—S. Higgins has moved his saw mill to Belmont, N. S., where he will operate this winter.

—Incorporation has been granted to the Crow's Nest Lumber Company, Limited, of Wardner, B. C.

—The dissolution is announced of L. Leveille & Company, sash and door manufacturers, Montreal.

—The saw mill of James Leigh & Son, Victoria, B. C., has been leased to J. Black and J. Caskey.

—T. E. Atkins has been admitted as a partner in the Red Cedar Lumber Company, Vancouver, B. C.

—Thomas Meredith has disposed of his lumber business at Yorkton, N. W. T., to J. A. Magee and J. A. Gregory.

—An electric light plant has been installed in John E. Moore's new saw mill at Pleasant Point, near St. John, N. B.

—An examination for cullers was held by the Department of Crown Lands of Ontario at Thessalon on December 18th.

—Fugere Freres, saw and flour mill, Batiscan, Que., have dissolved partnership and have been succeeded by Narcisse Fugere.

—The new sash and door factory of the Hanbury Manufacturing Company at Brandon, Man., is almost completed. It is 50x90 feet.

—The Canada Lumber & Timber Company, Limited, has been organized at Gibson's Landing, B. C., to succeed Drew & Hntchinson.

—David Conklin has submitted a proposition to the town council of Kingsville, Ont., to establish a box, sash and door factory there.

—Clinton Bigelow, of Cumberland county, N. S., has purchased a small tract of timber land near Blomidon and intends erecting a saw mill there.

—Negotiations have been finally closed for the erection of a cooperage mill at St. Thomas, Ont., by the Sutherland-Innes Company, of Chatham.

—In connection with the new shops now under construction by the Canadian Pacific Railway in Montreal, there will be a planing mill 500x126 feet and a large dry kiln.

—Williamson & Crombie, lumber merchants, Kingsbury, Que., have admitted G. W. Crombie and T. G. Torrance into partnership, the style of the firm remaining unchanged.

—George Burtis is removing his saw mill from Munising, Mich., to Thessalon, Ont., where he has been given a free site and exemption from taxation for ten years.

—The town of Walkerton, Ont., has granted a bonus and exemption from taxation to Kerr & Harcourt, of Parry Sound, Ont., to establish a spool and bobbin factory there.

—The British Columbia Manufacturing Company, of New Westminster, B. C., are taking steps to establish a cross-ply veneer mill, the raw material for which will be cottonwood.

—John J. Gartshore, dealer in railway equipment, Toronto, has disposed of 100 tons of 30 lb. rails, one locomotive and 15 cars to the Hanover Portland Cement Company, of Hanover, Ont.

—Quebec capitalists have formed a company and secured a site for the erection of a large match factory at St. Raymond, Que. It is proposed to expend $200,000 on buildings and plant.

—The Monarch Lumber Company, of Whatcom, Wash., have been negotiating for a site near Vancouver, B. C., on which to build a saw mill. The company recently purchased timber limits in British Columbia.

—It is said that the contract has been awarded for the erection of a large saw mill on the south shore of Burrard Inlet, B. C., for the Vancouver Bevel Siding Lumber Company. Vancouver and Fairhaven capitalists are interested.

—John E. Moore, of St. John, N. B., and J. A. Patterson, George Soper, A. L. Fenwick and Randolph Dixon, of Grand Falls, N.B., are applying for incorporation as the J. A. Patterson Lumber Company, with a capital of $20,000 and headquarters at Salmon River Falls, Victoria county.

—The new saw mill under construction at Trout Lake, B. C., for E. L. Kinman and other capitalists will consist of a band saw mill with a capacity of 100,000 feet per day, shingle mill, lath mill and sash and door factory. There will also be an electric light plant of 1,500 lights capacity.

—The Prairie Lumber Company, of Winnipeg, Man., has been incorporated by J. C. Graham, manager at Winnipeg for the Rat Portage Lumber Company; John Love, T. T. W. Bready, G. R. Crowe and S. P. Clark, all of Winnipeg. The capital is $100,000 and it is proposed to manufacture and deal in lumber, pulp wood, etc.

—An item in last issue referring to the formation of the Great Northern Lumber Company stated that the company had taken over the saw mill of J. B. Scott at Conception at the figure of $24,700. This was an error, as the mill at Conception which has passed into the hands of the new company, as well as the mill at Mount Tremblant, were owned by Solomon Cole. J. B. Scott is president of the new company, and S. Cole vice-president and managing-director

—The Graves Shingle Company, of Blind River, Ont., at the head of which is F. P. Graves, of Bay City, shut down their mill towards the end of November, having manufactured 10,200,000 white pine and cedar shingles. Mr. Graves says that the largest day's cut of pine with a Perkins' hand machine was 63,000 16-inch shingles; 26 days' average, 50,000 a day; 1,300,000 in one month with one machine. He believes it is the largest cut of shingles ever made in Canada with one machine.

—The Pacific Coast Lumber Company expect to have their new saw mill at Vancouver, B. C., completed early in January. This mill will be one of the most up-to-date establishments in Canada. It will be equipped with a Clark Bros.' double band and carriage, Simondson's log turner and the Berlin Machine Company's planers. The capacity will be 250,000 feet of lumber in twenty-four hours. The officers of the company are: President, W. J. Sheppard, Waubaushene, Ont.; vice-president and manager, J. G. Scott, Vancouver; secretary and treasurer, T. F. Gibson.

—Work has been commenced on a large woodworking factory to be built at Woodstock, N.B., by the Woodstock Wood-Turning Company, of which William Craddock is manager. The buildings to be erected include a turning and manufacturing building 30x100 feet, saw mill 24x80 feet, engine room 24x25 feet, dry kiln 30x50 feet, and store room and shipping building 30x140 feet. Power will be supplied by two 40 h.p. engines. The timber used by this company will be basswood, ash, elm, beech, birch and maple, which will be taken down to five inches in diameter. There will be three turning machines with a capacity of about 12,000 spindles per day. Later on it is the intention to make axe and cant hook handles and baskets. The bulk of the output will be marketed in Great Britain.

—Mr. R. Cook, who organized and has managed for the last thirteen years the South River Lumber Company, of South River, Ont., has resigned the management of the company and will be succeeded by Mr. Ratz, a former president of the company. Mr. Cook, with his family, has removed to Berlin, Ont., and for the present at least does not propose to engage in business. He is the owner of limits on the north shore of Lake Huron between Killarney and Little Current, which he may perhaps decide to operate. The South River Lumber Company have a contract with the Turner Lumber Company, of Midland, Ont., to cut the timber on their limits in the vicinity of South River. The company are installing in their mill new gang, band and circular saws, by means of which to increase the capacity of the mill from 6,000,000 to 25,000,000 feet per annum. At this rate of cutting five or six years will be required to complete the contract with the Turner Company.

A LARGE VENEER MACHINERY PLANT.

One of the prettiest towns in Ohio is Painesville, magnificently situated on the banks of the Grand River, which winds its way in a picturesque manner through the town. The parks, public buildings and monuments are all tasteful. The great machinery plant of the Coe Manufacturing Company is one of the sights of the place.

When our representative called the works were running full blast. Mr. Coe took him in hand, and a thorough inspection of the works resulted therefrom. "A great big business" is written largely all over the place, with business-like people and business-like methods.

The works are new and magnificently located, with private tracks of the B. & O. Railway running through the yards, having connection with the Nickle Plate and Lake Shore railway systems. The factories are situated on the high plateau overlooking the river.

The Coe Manufacturing Company have their own electric lighting plant, also a plant for heating and ventilating the entire works. They have one of the largest and most complete plants devoted to the manufacture of veneer cutting machinery in existence, all well lighted. About thirty of the veneer machines were to be seen in various stages of manufacture. Our representative counted seven "dryers" in process of construction as he entered the works. Machines are here, belted ready to do demonstrative cutting of veneers. The works are equipped with all the latest appliances and tools used in the various lines. About 500 tons of finished parts are carried in stock in case of repair work, which can be shipped immediately.

The Coe Manufacturing Company's recent shipments to Canada included plants for the Algoma Commercial Company at Sault Ste. Marie and the Aptus Veneer Company at West River, N.B. The capacity of the Coe plant is 2,000 tons, and when our representative called they were working on orders for machinery aggregating 300 tons. A very large staff of skilled mechanics is employed. The ventilating apparatus in the buildings is arranged so that hot air in winter or cold air in summer is circulated throughout. Running around the works, high vertical, was a powerful crane and conveyor, for the purpose of moving or shipping the machinery. The view of the plant we present herewith is a very good one, but it does not show the bustle and activity going on in the vicinity.

The veneer-drying apparatus devised by this concern is as near perfection as human ingenuity can bring it. We give a view of their automatic veneer-drying machine, which consists of a series of iron rollers incased in a rectangular-shaped box, properly geared and driven by a shaft running the entire length of the box. With it is a hot blast fan engine for driving the fan and an independent engine for driving the machine itself. Thus arranged the apparatus can be operated at night economically, only live steam being required as a power.

The Coe Company have their own natural gas wells on the premises, drawing the fuel from the bowels of the earth. The supply seems inexhustible. Their office building is among the finest to be found, finished and furnished throughout in veneers. "We use immense quantities of maple," said Mr. Coe, "and I suppose we will eventually have to go to Canada for our supply of this wood."

The experience of the Coe Company is that good machinery and good advertising is what makes an invincible combination. The company believe in steady, liberal advertising. As one put it, "It is just as much of a mistake to advertise only part of the time as it would be to make good machinery only part of the time." The Coe Company have a good thing, for they make the very best machinery, and that is too patent a fact not to let it become known.

GREAT VENEER MACHINERY PLANT OF THE COE MANUFACTURING COMPANY, PAINESVILLE, OHIO.

EXTENSIVE DRY KILN PLANT.

The name "Morton" as associated with dry kilns for drying lumber, etc., has become very familiar to lumbermen and manufacturers of forest products during the past few years, during which period the Morton kiln has been adopted by some of the largest manufacturers in the United States, which certainly indicates a bright future. One of the greatest compliments paid the Morton kiln was when the Allis-Chalmers Company selected it for their new mammoth plant at Milwaukee for drying their pattern stock. In addition to this comes information that the Pullman Company have decided to install a battery of 20 Morton moist air dry kilns in connection with their great manufacturing industry located at Pullman, Ill. These kilns will all be about 80 feet long, and range in width from 18 to 40 feet, which will make a coutinuous line of kilns about 500 feet long, and will have a holding capacity of over one and a quarter million feet of lumber at one time. The kilns will be quite a novelty from the fact that they will be absolutely fire-proof, all walls being of brick and the roofs of tile, with brick and steel supports as an under construction upon which steel cars operate. The Pullman Company have had years of experience with various makes of kilns and now, we are advised, propose to abandon all other methods, giving precedence to the Morton moist air kiln; consequently the A. H. Andrews Company, who manufacture and sell the Morton kiln, should feel highly complimented. However, as the Andrews Company have spent years of labor and thousands of dollars in bringing the Morton kiln to its present state of perfection, they are certainly entitled to a just reward, and we wish them a continuance of the popularity which their kiln is now enjoying. The A. H. Andrews Company are located at 300 Wabash Avenue, Chicago, Ill. Such of our readers as are interested in dry kiln matters are requested to write to the company for a catalogue, as they desire all interested parties to have same on file even if they are not ready to negotiate for dry kiln apparatus. They will gladly send fac-simile copies of testimonial letters to persons wishing to learn the opinion of others as to their kiln.

AUTOMATIC VENEER DRYING MACHINE MANUFACTURED BY COE MANUFACTURING COMPANY.

NEW MILL OF THE LILLICRAP, TATE LUMBER COMPANY.

The Lillicrap, Tate Lumber Company have just completed the erection of a new saw mill at Lakefield, Ont. It is a circular mill with a capacity of from 25,000 to 30,000 feet per day. The machinery was manufactured and installed by the William Hamilton Manufacturing Company, of Peterborough, who have furnished an up-to-date plant.

The mill is built on concrete foundations throughout. It is 30 x 84 feet and 16 x 26 feet, with stone boiler and engine room 25x36 feet. The plant comprises the usual equipment of steam niggers, live rollers, trimmers, slab saws, etc. The saw carriage is of the newest design. The saw dust is disposed of by means of a Dutch oven, and the exhaust steam from the engine heats the water before it is forced into the boiler. The company now have a number of men at work in the woods taking out logs for the ensuing season.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 28 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, CANADA, DECEMBER 31, 1902 No.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

Weekly Lumberman, published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contain interviews with prominent members of the trade, an character sketches and portraits of leading lumbermen Its special articles on technical and mechanical subject areespecially valuable to saw mill and planing mill mer and manufacturers of lumber products.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m on Tuesday to insure insertion in the current week's issue.

WANTED—1 INCH, 1¼ INCH AND 1½ INCH Soft Cork Pine 1sts and 2nds, also deal ends. Apply BOX 20, CANADA LUMBERMAN.

WANTED—INCH CULL SOFT ELM AND Black Ash, also two-inch Birch, common and better. R. E. KINSMAN, Hamilton.

FOR SALE.

TWO GOOD TIMBER BERTHS IN ALGOMA. Area 36 sq. miles each. License covers all timber. THE NIPISSING LUMBER CO., LIMITED, Hamilton, Ont.

WHITE PINE FOR SALE

ONE AND A HALF MILLION FEET OF one, two and three inch White Pine Lumber, Mill Run, from good large Logs. PINE LUMBER COMPANY, Cartier, Ont., Canada.

DESIRABLE FACTORY PROPERTIES FOR SALE

DESIRABLE FACTORY PROPERTIES ARE offered for sale in the thriving towns of Parry Sound and Wiarton, Ontario. Both are situated in excellent timber districts on Georgian Bay, with abundance of hardwood and softwood timber within easy reach.

The factory in Parry Sound is a first-class frame building, nearly new, on stone foundation and stone abutments, two storeys, 120×50 feet, with stone engine and boiler house 28×32 feet, containing a Wheelock engine of latest design, cylinder 11×28 inches, and suitable boiler built in and all ready for running, in use only four years and in perfect condition. Also an excellent steamboat wharf with twelve feet of water. With the factory are three acres of land on a public street with electric light and privileges of using town water, good fire protection.

The factory at Wiarton is also a frame building of two storeys, 50×26 feet, detached boiler house, on shores of Colpoy's Bay, with about three acres of land in the town of Wiarton. Full particulars furnished on application. Correspondence solicited. Apply to

KER & HARCOURT,
Parry Sound, Ont.

WANTED. — Pair of Twin Engine Steam Feeds 8" or 11" cylinders. State condition size drum. Box 66, CANADA LUMBERMAN.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

WANTED — BASSWOOD, COMMON AND Better, must be full inch, winter cut. Are open to contract for the season's supply. Apply Box 30, CANADA LUMBERMAN.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

WANTED AT ONCE—SUPERINTENDENT for ground pulp and cardboard mill, capable of taking complete control; only first-class man acceptable, not over 35 years of age and sober; good prospects for right man; state wages expected and references. Address P. O. Box 20, Chicoutimi, P. Q.

Rails and Cars for Sale

TEN MILES 30 LB. STEEL RAILS IN GOOD order for relaying; Three Locomotives and Fifty Logging Cars, immediate shipment. For particulars apply to JOHN J GARTSHORE, 83 Front Street West, Toronto.

WANTED—TIMBER ESTIMATOR

AN AMERICAN FIRM WISH TO SECURE the services of a thoroughly competent and trustworthy man to cruise a certain lumber district and pass opinion upon the probable worth of the timber thereon. Address in first instance "RANGER," care CANADA LUMBERMAN, Toronto, Canada.

For Sale.

RED OAK IN THE LOG.

25 TO 30M FEET, CONVENIENT TO Railway. Parties wanting such timber can have a bargain. Owner has no use for same. Apply in first instance to "Red Oak," care of CANADA LUMBERMAN.

IMPORTANT SALE

A FARM, 9 x 40 ARPENTS, WITH AGRIcultural implements complete; flour mill, modern door and sash factory, saw mill complete, shingle mill, planers; all these mills are operated by water power, and are situated on the river bank; booms; 16 miles of timber limits, of which 10 miles are well wooded with cedar and spruce; dams; camp with sleighs; horses, vehicles saws, chains, cooking utensils, also private residence. For particulars apply to JOSEPH ROY, Riviere Blanche, Matane Co. Que.

WANTED

Young, hustling, vigorous English and French speaking Woods Superintendent. Must thoroughly understand economic timber and pulpwood logging and capable of handling workmen to advantage. High-class wages to high-class man. Don't apply if not entirely qualified. Address Box 114, CANADA LUMBERMAN.

WANTED—WHITE WINTER CUT MAPLE, must be straight in grain, 1¼ inch, 1½ inch and 2 inch. Are open to place orders now. Apply Box 40, CANADA LUMBERMAN.

WANTED—TO PURCHASE MACHINERY for Band Saw Mill, including boilers and engines, daily capacity about 40,000 feet. Apply THE NIPISSING LUMBER COMPANY, LIMITED, Hamilton, Canada.

WANTED — A MILL RUN OF FROM three to five million feet of White Pine, to be cut to order. Parties open for a deal of this kind, please write Box No. 450, care of CANADA LUMBERMAN.

FOR SALE

A QUANTITY OF 1 INCH ASH, ELM AND Basswood, cut 1902. Also Sawn Cedar Ties. Address P. O. Box 213, Almonte, Ont.

WANTED.

A COMPLETE LINE OF PLANING MILL Machinery. Shafting. Hangers, Belting, etc. We would be pleased to hear from persons having Woodwork Machinery for sale. Apply Drawer 12, Hamilton.

WANTED PROMPTLY

3 Carloads 3 inch S. Elm 1sts. and 2nds.
8 " 1 " " " S. Cull and Better.
Also can handle for later shipment a quantity of Ash, Basswood, Birch, Elm, Oak and other hardwoods. Write us. Mention Bill No. 153.

TAYLOR & CRATE,
269 Elk Street. Buffalo, N. Y.

TO THE LUMBER TRADE.

In the February number of the CANADA LUMBERMAN will appear a compilation of statistics referring to the lumber trade of 1902. As in previous years, circulars have been sent to lumber producers throughout the Dominion, and it is hoped that they will assist us as heretofore by giving as much information as possible regarding the production and sale of lumber and the conditions which prevailed in the trade throughout the year. By means of their hearty co-operation we hope to present a review of much value to the lumber fraternity. Those who have not yet returned their circulars are respectfully solicited to do so as soon as convenient.

We shall be pleased to receive reports from different sections of the Dominion as to the production of lumber and quantity of unsold stock on hand at the close of the year. Persons sending such reports will confer a favor upon the publishers.

The brigatine Ethel Clarke is loading lumber at Bear River, N.S., for Cienfuegos.

A steamer has been fixed for four voyages from Miramichi, N. B., to w.c. England next spring at 40 shillings for deals.

Gillies Bros., of Braeside, Ont., manufactured during the past season 40,000,000 feet of lumber, 4,000,000 laths, 18,000,000 shingles, and 100,000 ties.

CURRENT TRADE CONDITIONS.

ONTARIO.

Business in lumber is of the kind that characterizes the close of each year. Except for urgent requirements buyers will not increase their obligations until they start into the new year. Little fault can be found, however, with the lumber situation. The number of inquiries which have been received by manufacturers and dealers is taken as a strong indication of an early and active spring trade. Pine mill culls were singularly active during December, and the quantity of unsold stock in mill yards is much less than was predicted two months ago. While prospects are bright for all kinds of lumber and present prices will doubtless be sustained for some months to come, there are evidences of a rise in the price of both hemlock and basswood lumber. The demand for hemlock is gradually expanding, whereas the production of logs this winter will not be above an average quantity. The cost of obtaining logs is fully $1 per thousand more than last season, and by many it is predicted that an advance of $2 in the price of lumber will follow. The main condition affecting basswood is the decided scarcity of that lumber. For some time dealers have found great difficulty, on account of the scarcity, in filling orders, and in some cases have been obliged to refuse large bills. Recognizing the situation, several dealers are quietly contracting with manufacturers for their 1903 production, the result of which promises to be severe competition and higher prices. Export trade is an important outlet for basswood, and during the past season several large shipments were made to Great Britain and Germany.

Reports from the logging districts tell of favorable conditions, and if there should be no setback the production of pine this winter will doubtless be as large as last season. Woodsmen are now more plentiful. A government official places the square timber output of the Ottawa Valley this winter at 2,000,000 cubic feet, as compared with 1,875,000 cubic feet last season.

QUEBEC AND NEW BRUNSWICK.

From every quarter comes the report of firmness in spruce lumber prices. Shippers have contracted for a considerable quantity of deals for export to Great Britian, and several mill cuts have been purchased for the American market. Local buying also is active for this season of the year, the farmers evidently being in good condition financially. Perhaps the condition which exerts a greater influence on prices

that anything else is the prospect of a shortage in the log supply. Owing to high wages, scarcity of labor, and weather conditions, it is predicted that the production of spruce logs in Quebec and New Brunswick will be much smaller than last winter. One manufacturer advises us that he expects to secure spruce enough to stock only one mill, whereas three mills were stocked last season. The supply of both lumber and shingles is so small that a material reduction in the log input this winter would be certain to result in higher prices next year.

UNITED STATES.

A meeting of the Mississippi Valley Lumbermen's Association is to be held this week to revise the price list on lumber. There are indications that an advance of fifty cents will be made on piece stuff, the supply of which is very short. No.4 boards are also showing strength and have been advanced one dollar per thousand by several manufacturers in the Wisconsin Valley. It is doubtful whether the stock of pine lumber on hand at the lake markets will be sufficient to take care of the winter trade, particularly as there continues to be a large demand from the east. In Chicago trade is active and building operations fully twice as large as at the corresponding date one year ago. Prices there are firm, based on $17.50 for short pine piece stuff delivered. Box manufacturers in the Eastern States are doing a splendid trade. Sales of 10-inch box lumber have recently been made in Buffalo at $19 to the consumer, which is considered a very good price. Hardwoods remain firm. Maple is strong and there is a movement of beech to take the place of it. The supply of basswood is so small that it is possible to obtain almost any reasonable price. Ash and elm are more plentiful than the other hardwoods.

Logging condititions in the Lake Superior district are excellent and every effort is being put forth to secure a large crop of logs. The east makes complaint regarding the continued warm weather, which in many place has spoiled the roads. Logging operators state that they are constantly visited by dealers wishing to purchase their logs with the idea of having them sawn to required specifications.

GREAT BRITAIN.

Agents of shippers have abandoned a efforts to secure business until after the Yuletide holidays. Buying for immediate requirements has been confined largely to the better class of lumber, the stock of which is much lighter than of the lower grades. Owing to the large import from the Baltic, a disposition is shown by sellers to moderate their asking prices. It is estimated that the quantity of Baltic rough boards in the London docks is sufficient to supply the requirements for the next nine months. These conditions do not apply to Canadian lumber, both pine and spruce deals being in lighter supply than one year ago. The unfavorable statistical position of Baltic lumber, however, is likely to exert a sympathetic influence upon Canadian stock. Recent public sales brought good prices for the regular sizes of pine and spruce deals, 8 inch and under showing a slight weakness.

The number of lumber cargoes received at Cleveland, Ohio, during the past season was 558, and the amount of lumber delivered 279,000,000 feet. Of the lumber received Michigan furnished 221 cargoes, Ontario 120, Wisconsin 122, and Minnesota 95.

STOCKS AND PRICES.

The quantity of lumber exported in 1902 from Montreal to South America was 863,000 feet.

Guilford V. Peck has purchased the lumbering property of Howard Stevens at Memel, N. B.

W. J. Trenouth & Bro., of Powassan, Ont., are only taking out about 1,000,000 feet of logs this winter, mostly hemlock and spruce.

B. W. Gagnon, M. P., of St. Stephen, N.B., states that the cut of logs in Charlotte county this winter will not exceed 10,000,000 feet.

In the Philadelphia market spruce plastering lath are stiff at $3.50 for eastern lath and $3.65 for West Virginia lath. Hemlock lath rule about $3.50.

The receipts of lumber at the Tonawandas by vessel this season were 407,922,933 feet, 44,673,487 feet less than in 1901 and 3,000,000 feet less than in 1900.

The timber limits formerly owned by the Bank of Ottawa and situated near Princa Albert, N.W.T., have been sold to Telford & Company, who are operating them this winter.

D. E. Sprague has commenced cutting logs near Sprague, Minn. He is also cutting logs along Rainy Lake, which will be shipped over the Canadian Northern road to his saw mills at Winnipeg.

Jacob A. Shaver, of Ancaster, Ont., has purchased for next season's sawing about 700,000 feet of logs, including 400,000 feet of white pine and 300,000 feet of white and red oak and some chesnut.

The Hamilton & Merriman Company, of Menominee, Mich., have disposed of their 1903 cut of lumber to Francis Beidler & Company, of Chicago. The cut will amount to 45,000,000 feet, and the consideration is about $750,000.

The Moyie Lumber Company, of Moyie, B.C., are operating four camps this winter. They have one at Swansea, one near Monroe Lake, and one on the Clark ranch. The East Kootenay Lumber Company have 150 men employed in lumbering operations this winter.

The following timber berths will be offered for sale at the Crown Lands office, Fredericton, N.B., on Wednesday, January 7th: Three square miles north of Canaan river, J. H. Barry, applicant; two square miles at Roberville Sett, Gloucester county, J. J. S. Hachey, applicant; two square miles north of Newcastle Creek, John P. Yeamans, applicant.

The Shepard & Morse Lumber Company, of Ottawa, after a lapse of five years have decided to resume operations. The company has several large camps at work on its own limits in the Kippewa district taking out logs. A contract has also been entered into with Alexander Lumsden, ex-M. P. P., whereby the Shepard & Morse concern will secure all of the better class of logs cut on the Lumsden limits this winter. It is expected that between six and seven million feet will be secured by this move alone.

The Department of Interior at Ottawa is asking for tenders up to January 14th for a permit to cut timber on Berth No. 1039, comprising section 30, township 2, range 12, in the Province of Manitoba, containing an area of one square mile; also until January 21st for licenses to cut timber on Berth No. 1037 on the north side of Bad Throat river, comprising ten square miles, and Berth No. 1036, comprising section 30, township 4, range 10, containing one square mile, both in the province of Manitoba.

Stocks at the present time, says the Mississippi Valley Lumbermen, are very evenly balanced in the lower grades, but in many instances are in bad shape in the upper grades, some of the items being out of stock almost altogether. A feature of the market is considerable buying by the Chicago and Kansas City packing houses of No.4 lumber for packing purposes and boxes. Lath is selling well, bringing the list price. Mixed of good quality are sold for $3, while the straight white pine lath brings $3.50. White pine shingles are rather an erratic sort of an article, selling in some instances 25 cents off the list and in other cases selling at the list prices.

THE LUMBER TRADE AT DULUTH.

In accordance with their annual custom, the inspectors and shippers of lumber at Duluth have prepared their annual statement of the production, shipments and other matters of interest of a statistical nature, relating to the mills on the Duluth-Superior harbour for the year ending December 1.

Early in the season it was expected that the production and shipments would both be less than in 1901, but, on the contrary, there has been an increase in both directions. The following comparative statements, December 1, 1901, to December 1, 1902, will be of widespread interest in the lumber trade:

	feet.
Production, 1902	442,585,000
Production, 1901	423,511,000
Shipments, 1902	465,230,000
Shipments, 1901	449,470,000
Total on hand, 1902	119,417,000
Total on hand, 1901	142,062,000
Total for sale, 1902	66,161,000
Total for sale, 1901	51,503,000

The production of lumber on the Duluth-Superior harbour was 19,074,000 feet greater than in 1901. Compared with stocks on December 1, 1901, there was 23,645,000 feet less lumber on hand on the same date this year, and there is an excess of 14,658,000 feet for sale as compared with a year ago.

The report states, also, that rail lumber shipments for water shipment will bring the total shipments by water from the head of Lake Superior to about 550,000,000 feet for 1902.

IT PAYS TO ADAERTISE IN THE LUMBERMAN.

Mr. J. S. O'Brien, of Antigonish, Nova Scotia, whose advertisement has appeared in the weekly CANADA LUMBERMAN for three months past, writes:—"I paid draft for advertisement, and I must say that I never felt that I got as good value for any money paid by me. I am astonished at the circulation your paper has. It seems to go everywhere. I don't want you to think I am giving you blarney. I am not. I say what I think. I look upon your paper as a friend. I wish you the success you most undoubtedly deserve."

EXTENSIVE TIMBER LIMIT SALE.

A dispatch from Ottawa says that it is learned on good authority that McLachlin Bros., of Arnprior, have purchased from Alex. Barnet, of Renfrew, a pine timber limit on the Petawawa river comprising one of the largest blocks of high grade pine tributary to the Ottawa river. The price is said to be in the neighborhood of $1,000,000.

DOORS AND MOULDINGS.

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in first instance to "Empire," CANADA LUMBERMAN.

The annual meeting of the Hardwood Manufacturers Association of the United States will be held at the Grand Hotel, Cincinnatti, Ohio, on January 27th and 28th, 1903.

REMARKABLE HARDWOOD SITUATION.

Perhaps we have made the observation before, but it will bear repetition, that in the hardwood business the present is a really wonderful condition. Probably never before, in proportion to the demand, has there been such a small amount of hardwood lumber available. The scarcity of dry stock affects everybody but the few heavy consumers and perhaps a few heavy dealers who contract their supply so far ahead that they are not affected by the conditions of a year. Not only is this so but all parts of the country are in substantially the same shape. There is no lumber worth speaking of anywhere at the mills or in the markets of the east or west.

The American Lumberman says that the scarcity is almost the same in all the diffe ent kinds of woods. Some are in more plentiful supply than others, but in none is there a satisfactory quantity. Not only are consumers and dealers looking for stock but manufacturers themselves. There are many heavy saw mill men who have their regular trade that they wish to supply. Being unable this year to meet the requirements of their customers from their own stocks they are in the market for additional supplies. Producers who never did such a thing before are now trying to buy. This is particularly noticeable with the quartered oak producers. Instances have been known where such people have within a week paid $4 a thousand more for common quartered oak than they would have had to pay four weeks ago and they are unable to find at any price the quantity that they want.

As to first and second quartered oak the market is almost bare and it is hardly possible to quote a price which will fairly represent the market. In Chicago there is a wide range, with its lowest limit at above $60. Red quartered is practically exhausted. An anomalous condition is seen in the prices of plain sawed red and white oak. They are almost as scarce as quartered sawed, but the price has advanced hardly at all within the last six months. One reason for this may be that the supply of plain sawed oak can be replenished with much ease as compared with quarter sawed, though, of course, in either case there remains the problem of drying.

In cottonwood there is an unheard of situation. Within a few weeks there was a sale of a considerable quantity of log run cottonwood at $17.50 on barge. We do not have to think back very far to the time when anything over $10 would have been a fair price.

Another wood of the same general class as cottonwood and poplar is bass-

wood. There is no market value to be attached to this wood because there is none of it.

Perhaps the most remarkable record of late has been made on birch and gum, which have been coming to the front rapidly. Both are substitute woods. Birch is being heing heavily used in furniture factories and to a certain extent for interior finish, while gum in the lower grades and the sap stock is being used more freely than ever before for boxes, while the red is finding many uses in finish, furniture and various lines of manufacture.

CANADIAN LUMBER SHIPMENTS.

From Annapolis, N.S.: Schr. Edna, for West Indies, 350,000 feet lumber, by Pickles & Mills. Barque W. W. McLaughlan, for Buenos Ayres, 550,000 feet lumber, by Clark Bros., of Bear River.

From Halifax, N. S.: Str. Cheronea, for Manchester, 377,682 ft. spruce deals, 105,027 ft. spruce scantling, 305,443 pcs. hemlock deals, 13,633 ft. hemlock boards; for Garstone, 34,925 ft. spruce boards, 127,751 ft. scantling, 91,546 ft. ends, 505,885 ft. hemlock deals, 34,041 ft. hemlock ends.

From St. John, N. B.: Str. Alcides, for Glasgow, 46,000 feet deals, 1,344 bundles box shooks, by Schofield & Co.; 949,063 feet birch plank, 887 feet scantling, 10,113 feet ends, by Alex. Wilson; 376 bales wet pulp, by Hamelin & Ayers; 1,105 bundles spool wood, by Schofield & Co.; 20,000 feet deals, by Estate Frank Dudley. Str. Oronoco, for Grenada, 25,000 ft. pine boards, by A. Cushing & Co.

The planing mills of the Boake Manufacturing Co., at the head of Howland avenue, Toronto, were completely destroyed by fire on Friday last. Most of the lumber in stock was saved but a large quantity of finished products, such as doors, windows, sashes, mouldings, etc., was burned. The damage is estimated at $25,000, only about one-third of which is covered by insurance.

THE BOSTON MARKET.

There is a slight improvement at Boston in the demand for spruce lumber, with previous quotations fully sustained. The supply is small. The quotations are : Ten and 12-inch dimensions, $21 to $22; 9-inch and under, $19 to $20 ; 10 and 12-inch random lengths, 10 feet and up, $20.50 ; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50 ; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50 ; 5-inch and up, merchantable boards, $17 ; matched boards, $18 to $20 ; out spruce boards, $13 ; bundle furring, $17.

Hemlock lumber is quiet but steady at unchanged prices : Boards, 12, 14 and 16 feet stock, $14.50 to $15 for good eastern ; Pennsylvania, No. 1, $18 to $19 ; No. 2, $15 to $16.

There is an active demand for western pine lumber with the recent advances being easily obtained: Uppers, 1 to 2 in. $84 to $87; 2½ to 3 in. $92 to $97; 4-in. $96 to $100; selects, 1 in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78 ; 2½ to 3 in. $84 ; 4 in. $86 ; fine common, 1-in. $67 ; 1¼ to 1½ in. $69 ; 2-in. $72 ; 2½ to 3 in. $80 ; 4-in. $82 ; barn boards, $23 to $33 ; coffin boards, $28 to $32.

Hardwood lumber continues very firm, with maple especially strong at the advance. Quotations are : Quartered oak, $63 to $75 ; plain oak, $42 to $47 ; common and rejects, $20 to $25 ; red oak, plain, $43 ; whitewood, $45 to $47 ; sap and common, $30 to $35 ; brown ash, $41 to $44 ; white ash, $43 to $46 ; maple, $30 to $34 ; end-dried white maple, $42 ; birch, $27 to $30 ; birch, 75 per cent. red, $45 to $50 ; elm, $29 to $31.

Shingles are not changed in price, the demand being steady, with a moderate supply : Extra cedar, $3.50 to $3.55 ; clear, $3 ; second clear, $2.50 ; extra No. 1, $1.75 to $1.80 ; British Columbia red cedar, 16-inch, five butts to 2 inches, $3.50 to $3.60; 18-inch, five butts to 2 inches, $4.25 ; five butts to 2½ inches, $4.50.

Spruce clapboards are very scarce and higher prices are being paid for extras and clears : Extra, $43 to $44.00 ; clear, $41 to $42 ; second clear, $37.50 to $38; extra No. 1, $30 to $32.

Laths are firm and unchanged : One and five-eighths inch, $3.40 to $3.45 ; 1½ inch, $3.25 to $3.30.

WANTED

MESSRS JOSEPH OWEN & SONS, Ltd., of Liverpool, Eng., are open to treat for regular supplies of large quantities of HARDWOOD LUMBER, and will be glad to hear from holders who have to offer WHITE ASH, WHITE OAK, SCALY BARK and SECOND GROWTH HICKORY, POPLAR and WALNUT, in logs, planks and boards, also prime fresh BIRCH LOGS of large dimensions.

TREATMENT OF SECOND-GROWTH WHITE PINE.*

BY WALLACE I. HUTCHINSON, Wolfville, N. S.

The following methods of thinning and pruning white pine, and the effect of such cuttings, are based on investigation carried on in the natural pine groves of southern New Hampshire. Many of the principles set forth, although applicable to this portion of the country, will have to be slightly modified to suit conditions elsewhere.

IG. 1.—A WELL-MANAGED FOREST; LARGE TREES READY FOR MARKET; UNDERGROWTH SUFFICIENTLY DENSE TO PROTECT THE SOIL.

As the supply of white pine decreases and the stumpage value increases proportionately, the aim of nearly every farmer who owns a woodlot is likely to be the production of the greatest quantity of valuable timber in the shortest possible time. To do this, his first object should be to stock the area with a sufficient number of trees to form a complete cover overhead. This is not only beneficial to the soil, but also for the proper development of the trees. In the natural woods this state of affairs very often exists.

Natural forests are likely to be more valuable than artificial plantations, for most natural forests grow only in such situations as are congenial to the life of trees, the seeds of which will not germinate readily in unfavorable soils. Nature seldom errs in the choice of conditions favorable to tree-growth, a judgment in which man is very liable to error.

Shortly after the leaf canopy is established the growing trees begin to crowd one another, and the struggle for light and space commences. A number of trees overtop the rest, rearing their heads to the full enjoyment of the light. Below these a few trees here and there enjoy with their leading shoots the light which is not absorbed by the dominating trees. Others are left so far behind in the race that they are deprived of enjoyment of all direct light—that is, they are suppressed. They live for a shorter or longer period, but unless they are a shade-enduring species they are not apt to survive for any great length of time.

Thus the forest is divided into three classes —dominant, intermediate, and suppressed trees. This struggle for existence goes on during the entire life of the forest, and is apt to so reduce the growing space of each dominating tree that it cannot reach its fullest development, and on account of crowding is likely to assume a long, lanky shape, which is very easily damaged by wind and snow. It is this state of affairs that the owner should strive to obviate by thinning his trees. Thinning is the cutting out of such tree-growths as interfere with the healthy development, and hence the future value, of the crop. This form of thinning is termed the "weeding" out of the undesirable trees. A single tree growing in the open and in the complete enjoyment of light will develop a full crown and root system and lay on a maximum volume of wood, but growth under these conditions has several serious drawbacks:

1st. Trees growing in this manner do not always produce the greatest volume of wood per acre. Although every tree in a crowded woods has a smaller volume than the isolated one, yet, owing to the greater number of trees, the crowded stand generally has a larger total volume per acre, and therefore greater stumpage value.

2nd. Isolated trees usually grow short or crooked, while trees in thick woods are, as a rule, straight.

3rd. Trees in the open generally have branches low down on the trunk; consequently they produce knotty and less valuable timber. Moreover, open stands are not apt to improve the fertility of poor soil on account of exposure to the light, which dries out the moisture; hence open stands can be grown best only in naturally fertile soils.

These few conditions govern profitable growth in all localities. Thus while in one case it would be proper to remove all suppressed and dominated, and even a part of the dominating, trees, in another case it would be necessary to look carefully after all of these classes in order to secure the maximum growth and the highest timber value from the land.

Certain important changes are gradually taking place in the growth of trees in the forest, both individually and collectively. There are changes in the soil in which they grow, in the surrounding atmosphere, and changes wrought even upon the inhabitants in the neighborhood. These changes are chemical and mechanical. A growing tree takes from the soil the elements that are essential to its development, but restores them to the soil through its fallen leaves and branches in the form of carbonaceous and nitrogenous matter. Thus, under normal conditions the soil grows richer and capable of supporting larger and more luxuriant forests. The mechanical changes are more easily traced. The roots of trees change the composition of soil by forcing their way into it, thus disintegrating the rocks and earth and allowing the free access of air and water.

In dividing the trees of a forest into classes an account must be taken of the dead trees. These should be removed at every thinning, as they can be of no benefit to the other classes, but may be a constant source of danger from insects, fungi, and, in many cases, fire.

All thinnings are carried on with one of two objects in view: first, the production of the greatest quantity of material; second, the production of the highest quality of timber. The means of attaining these ends differ considerably.

Experience has taught that the greatest

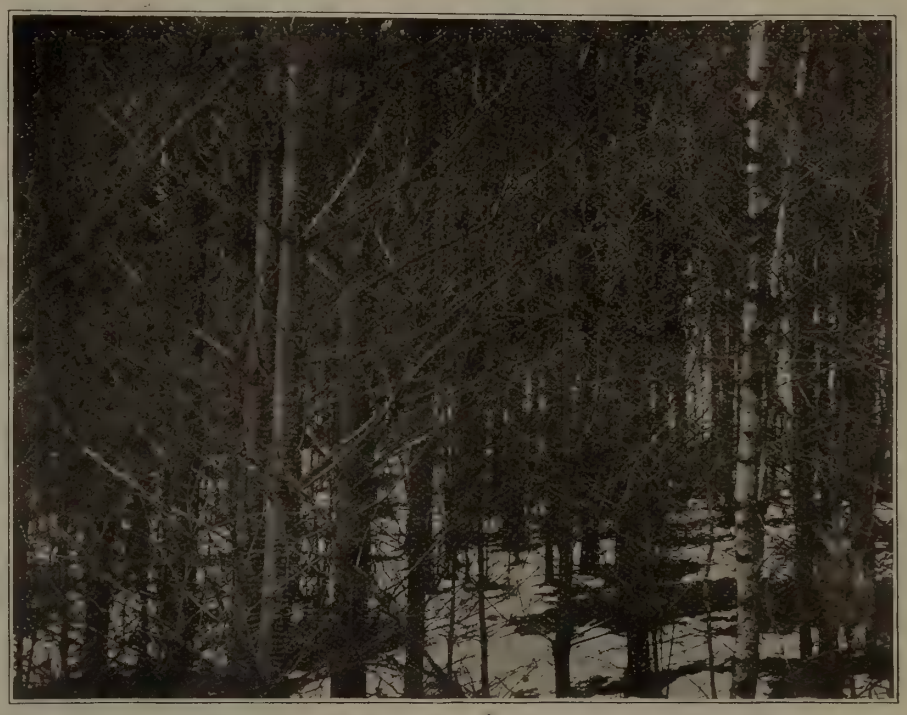

FIG. 2.—NATURAL REPRODUCTION OF WHITE PINE, SHOWING DENSITY OF GROWTH.

*Reproduced by permission from Forestry and Irrigation.

quantity of timber is produced in the shortest time by the vigorous development of the dominating trees. These are removed and converted into lumber as soon as the undergrowth is of sufficient density to protect the soil (Fig. 1). The first thinning is made as soon as the struggle for existence commences—that is, when it is found that the trees are contending with each other for light and space. If the owner of the woodlot has gone over his land in the early stages of its tree growth and weeded out the undesirable trees, this first thinning may be delayed till the tenth or fifteenth year, when the trees taken out may be utilized for firewood or temporary fence posts. The thinning should be heavy enough to give the trees that remain the space they require. As white pine may naturally come up in a very thick stand, quite a slash will be necessary to rid the woods of the undesirable trees (Fig. 2). In choosing the ones to be removed, the deformed and diseased trees should be taken first. The former, if left, will never amount to anything, and are liable to injure the growth of the remaining crop. The latter usually harbor injurious forest insects, which in a great many cases cause considerable damage.

(To be Continued.)

THE "STERN WHEELER."

With the opening up of territory in New Ontario and Western Canada, the question of transportation facilities will have to be considered and the best means devised for utilizing the present rivers and lakes for the purpose of distributing supplies to the new settlements.

We present to our readers a form of steam boat specially adapted for navigating shallow rivers and lakes, and for carrying large loads on a light draft of water. This style of steamboat is known as the "Stern Wheeler" and is largely used on the Mississippi and other western rivers, where the conditions are such that a deep draft boat cannot be operated. This style of steamboat is also well adapted for service in towing logs, carrying lumber, etc.

The boat illustrated is 80 feet in length, 20 feet beam and draws only 16 inches of water. These steamers are now being constructed by the Goderich Engine Works, Goderich, Ont. The hulls can be supplied in parts so that they may be shipped by rail to destination and put together and completed by ordinary labor. The above company will upon application supply all information regarding these steamboats.

AN OWEN SOUND MANUFACTORY.

The Wm. Kennedy & Sons, Limited, engineers and iron founders, of Owen Sound, Ontario, is one of the oldest established firms in that line of business in the province. They have been continuously in business for over 40 years and are favorably known throughout Canada. Hydraulic and mechanical engineering seems to have "run in the family", as the Kennedys are born engineers.

WORKS OF WM. KENNEDY & SONS, OWEN SOUND, ONT.

In 1868 they commenced the manufacture of the Leffel turbine in Canada, and their water wheels carried off the 1st prize at the old Provincial Exhibitions whenever shown. They were also awarded the Bronze Medal of the Centennial Exhibition in 1876 and the Canadian Silver Medal for Canadian exhibitors at the same time. In 1880 they were again awarded the Canadian and French Official Silver Medals for their turbine exhibited at Paris. Later on they adopted the New American turbine, believing it to be the best all round water wheel made, and are now manufacturing it in all the different vertical and horizontal styles, to meet the continually changing requirements.

In connection with this department of their business, they have perhaps the largest and most complete set of heavy gear patterns to be found anywhere in the country, and as they have installed special, up-to-date gear-dressing machinery, they are in a position to do the very best class of work in this line.

The furnishing of iron bridgetrees, yokes and floor-stands also receive special attention at their hands. They have a large stock of patterns from which almost any mill or factory can be supplied. Heavy shafting, pulleys, etc., are special lines with them and particular care is bestowed on this class of work.

Situated as their shops are on the waters of the Georgian Bay, they enjoy the patronage of a large number of saw mills of the Georgian Bay district. Their trade with them is constantly increasing, and we cheerfully recommend them to those who have not hitherto given them their patronage.

Years ago Messrs. Kennedy & Sons started the manufacture of propeller wheels in a small way, but it has grown to such an extent that "The Kennedy Wheel" is now well and favorably known to most of the marine men on our lakes and rivers, and we are advised that they stand second to none in finish and efficiency. They make them in all sizes and for all purposes, running, towing or for general purposes as required, and solid or sectional as best suited to the different routes and conditions under which the wheel has to perform its work. We understand a special mixture of iron and steel, or all steel, is now being used to give greater strength without destroying the efficiency, as is done in the case of a "heavy club of a wheel". Particular care is taken in the foundry to get smooth, true castings, and this seems to be obtained to a remarkable degree. To help to supply customers as promptly as possible, considerably over one-hundred propellers are carried in stock, and the company claim to have the largest line of patterns and largest stock of propeller wheels in Canada. This fact of itself should be of great benefit to steamboat men, and their endeavor to furnish "Canadian made" propeller wheels promptly should be encouraged.

General marine repairs receive particular attention from them, and the close proximity of their shops to the docks and to the dry dock at Owen Sound must be a real benefit to their customers on the Upper Lakes.

Observing that no steel castings were made in Canada west of Montreal, The William Kennedy & Sons lately put up a special moulding shop (fitted with electric crane, etc.) and a plant for the production of steel castings, and now as good steel castings can be obtained from them as can be procured anywhere. Those requiring steel castings from their own patterns or from The Wm. Kennedy & Sons patterns, can get them in the rough or finished, as desired. The steel is produced by a special process, is of uniform grade and of a soft but very tough nature. We note that several of the large manufacturers of steam engines and mill machinery get their steel castings from this firm, and our readers can get "Canadian made" steel castings at Owen Sound. This industry should receive special encouragement from those wishing steel castings, because it is a pioneer industry to supply a long felt want.

THE "STERN WHEELER," MANUFACTURED BY GODERICH ENGINE WORKS.

OPENING OUT IN CANADA.

The Buffalo Tool & Machine Company, who have temporary offices at 116 Bay street, Toronto, are now engaged in the erection of extensive premises in the latter city. They are large manufacturers of wood and iron-working machinery. We hope to give an illustration of their works next month.

LUMBERMEN'S SNOW PLOUGHS.

The Wilkinson Plough Co., Limited, of Toronto, are making a plough for snow or ice roads which they claim is without a peer. The manager of this company states that the advertisement in last month's LUMBERMAN paid them well and was the means of booking several very large orders. The company's page ad. in this number is only another answer to the question "Does advertising pay?" We intend giving next month a description of the company's road makers and snow ploughs.

In addition to our large list of subscribers, this number of the CANADA LUMBERMAN is being sent to a thousand firms engaged in the lumber industry and in the manufacture and sale of saw mill and wood-working maceinery in Canada and the border States. If those who receive a copy will consult our advertising pages they will find therein everything that is required in any branch of the lumbering industry, especially machinery. The firms using these columns are the leading ones in their several lines. It will be to your advantage and will oblige both the publishers and advertisers when writing firms whose announcements appear in these pages if you will make mention of THE CANADA LUMBERMEN.

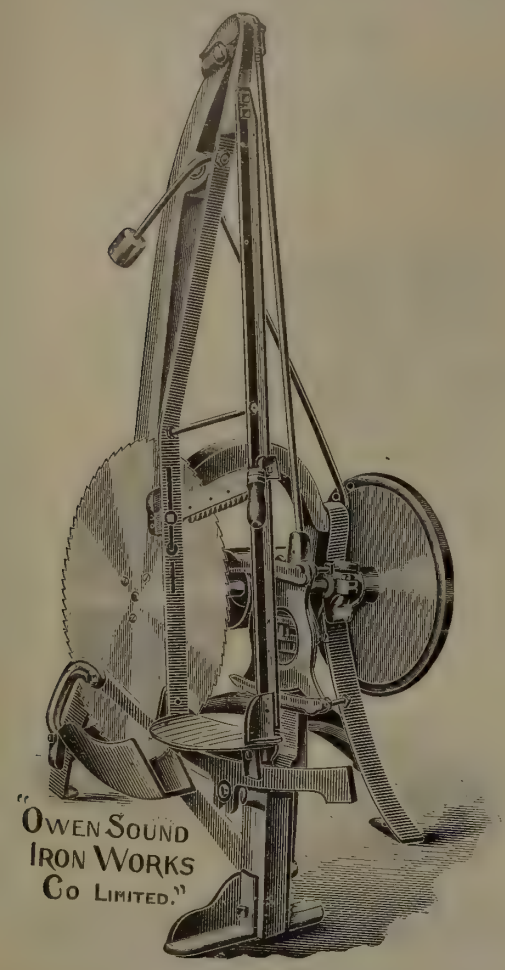
THE OWEN SOUND IRON WORKS COMPANY.

The Owen Sound Iron Works Company, Limited, are just completing at Owen Sound, Ont., a modern, up-to-date plant for the manufacture of engines, boilers, saw and shingle mill machinery, etc. The following gentlemen are the officers of this company : President, Mr. D. M. Butchart ; vice-president and secretary, Mr. C. A. Fleming ; treasurer, Mr, J. Tolton ; manager, Mr. J. M. Wilson.



SWING SHINGLE MACHINE MANUFACTURED BY OWEN SOUND IRON WORKS COMPANY.

The new buildings of this company will comprise one of the finest plants on the continent. Our representative was shown through the immense works and given details of the plans now being worked out. One of the buildings will be 330 feet long and about 50 feet wide, with railway tracks and over-head travelling cranes running right through the works. The machine shop will be 165 feet long and 45 feet wide, the moulding shop 60x42 feet, and the furnace room 45x28 feet. The pattern storage room will be 52½x31½ feet, with a smaller one 20x35 feet, and the boiler house will be 75x50 feet. All the buildings will be of stone, and will be heated by hot air blast in winter, and cold air will be circulated through them in summer.

The buildings are splendidly lighted, having a square foot of glass for every 2¼ square feet of floor surface. Artificial light will be provided by a combined system of electric arc and incandescent lighting from their own plant. The floor of the works will be of cement.

Power will be furnished by one of the latest type of Corliss engines, with necessary boilers. There will be installed a complete pneumatic plant for use in the machine and boiler shop. Among the equipment for the main shop will a complete set of rolls, punches and drills.

The location of the extensive works of the Owen Sound Iron Works Company is on Marsh street, extending to Water street. Splendid shipping facilities are provided, and the company are very accessible to New Ontario, where there is a ready market for saw mill machinery, boilers, etc.

The principal machinery to be manufactured will consist of steel saw carriages, shingle machines, lath machines, steam feeds, niggers, log jacks, and conveyers, also all kinds of cement machinery, a specialty being made of slurry mills and pumps.

We present an illustration of this company's all-iron and steel swing shingle machine, which has a cap city of 10 to 20 thousand per day. The saw and collar of this machine can be removed in five minutes and replaced by another without changing the set of the machine, saving much time when the saw is dull or impaired. The machine will cut shingles, heading, etc., and changes can be quickly made to suit different lengths and thicknesses of work.

The energetic manager of this concern, Mr. J. N. Wilson, speaking to a representative of this paper, stated that a single insertion of the company's advertisement in the CANADA LUMBERMAN paid them better and brought greater results than any other advertising ever done. "Yes," said Mr. Wilson, "we got a better return from that single insertion in your paper than from all our previous advertising, and if you like you may say I can vouch for it. We got large orders from Edmonton and the B. C. coast."

The company do a very large business in the ship repair line, and are putting in new equipment for this purpose.

ECONOMY IN LUMBER MANUFACTURE.

Lumber manufacturers, in keeping with the general progressive spirit of the times, are striving more and more to utilize every possible foot of timber in the log, and are now converting into profit what in former years had gone to waste, and was even an expense to get it out of the way. This has naturally created a demand for new and improved machines and labor saving devices, and opened up a wide field for the inventive genius of up-to-date saw mill machinery manufacturers.

Mr. M. Garland, president of the M. Garland Company, manufacturers of special saw mill machinery at Bay City, Mich., has always been to the fore, and usually in advance of the demands in this field, and to the versatility of his inventive genius is due many of the greatest labor saving devices known to saw mill engineering.

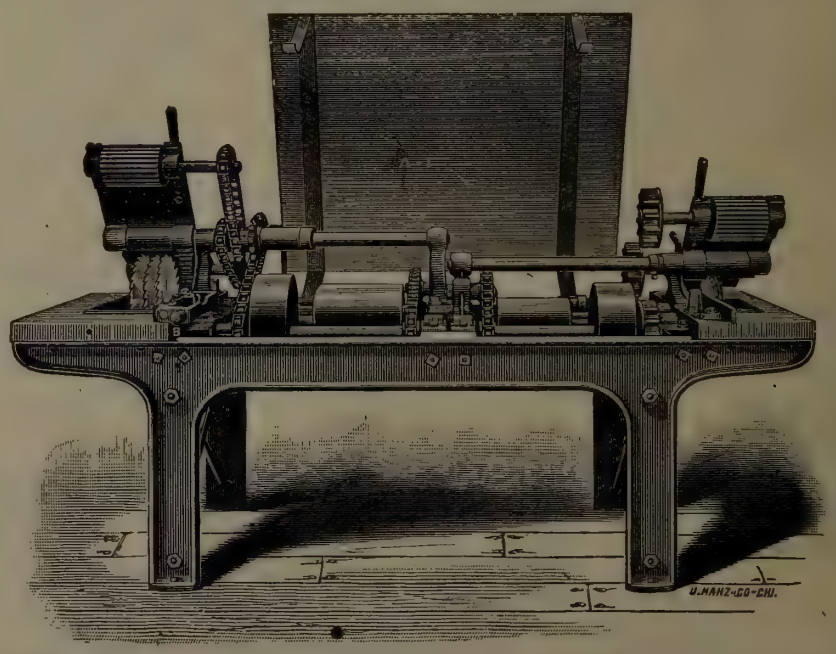
From the many excellent machines manufactured by the M. Garland Company we have selected the improved Eureka bolter and lath mill, which we illustrate in the accompanying engraving, as a sample of the high character machinery now demanded by the wide awake saw mill men of the country.

The cut shows a combined bolter and lath mill, in a substantial iron frame, of a neat design, and in addition to cutting lath and lath bolts, by a slight change of collars it can be adapted to sawing pickets and any stock from ¼ to 4" square or other forms. Both bolter and lath mill are equipped with upper and lower feed rolls in front and rear of saws, insuring a strong and positive feed of stock to saws. A wide deck or table (A-1) is arranged to conveniently receive the bolts from the bolter, from which they are taken and passed through the lath mill. The capacity of the machine is claimed to be from 40,000 to 60,000 perfect lath per day, when intelligently operated.

The pulley on the bolter arbor is 10" in diameter, 11" face, having a speed of 1800 revolutions per minute. The bolter feed pulley is 14 inches in diameter with 4-inch face, and runs at 105 r. p. m. On the lath mill arbor is a 7-inch pulley, 9-inch face, and has a speed of 2,600 to 3,000 r. p. m. The feed pulley of the lath mill is 7 inches, with 4-inch face, and runs at 130 revolutions per minute. The combined machine requires a floor space of only 7 feet 6 inches long by 3 feet 6 inches wide. When built separately the lath mill requires a floor space of only 4 feet 7 inches long by 3 feet 6 inches wide, and the bolter the same.

From these specifications it will be seen that this machine is scientifically proportioned, and adjusted so as to get the best possible results with the least expenditure of energy.

That the economical saw mill men recognize the merits of this machine is evidenced by the large number the M. Garland Company are installing in new mills, as well as mills that have been in operation for years. Detailed specifications will be cheerfully furnished on application.



COMBINED BOLTER AND LATH MILL MANUFACTURED BY THE M. GARLAND COMPANY.

DO THEY GET RESULTS?

One secret of the success of many a business firm is that they are willing to try new propositions to reach some of the world's trade. There are to-day hundreds of firms languishing instead of thriving because they do not place enough reliance on printer's ink and advertising.

That the CANADA LUMBERMAN is one of the best mediums in Canada has again been evidenced by a recent trial advertisement placed with us by the Walkerville Wagon Company. This wide-awake concern has an up-to-date manager who advertised lumber sleighs for sale. Before the second insertion of the advertisement they had sold their entire output, and attribute it solely to the use of our columns.

When our representative called upon the company he was shown several car loads packed to the doors of logging sleighs and lumber bobs—the last of the entire output—all sold by one insertion in the CANADA LUMBERMAN.

The Walkerville Wagon Company's specialties in lumber sleighs are the Ontario two-knee bob, the heavy teaming or logging sleigh, and the camel back Manitoba sloop sleigh. The logging sleigh is supplied with 2½, 3 and 4 inch runners, heavily built especially for logging. The draught is made directly from the bench where the load rests by means of chains and cross-chains.

The company show their appreciation of this journal by taking advertising space for a year in advance. Do they get results? Ask them. The CANADA LUMBERMAN is the best medium not only for saw mill machinery, engines and boilers, but for supplies and equipment of any kind used in the mills, on the drive, or in the lumberman's own home. The LUMBERMAN not only goes to nearly every saw and planing mill from the Atlantic to Pacific, but to large numbers actively engaged in the lumbering business in Canada and the States bordering thereon.

TRADE NOTES

The M. Garland Company, Bay City, Mich., recently received a telegraphic order for a lath mill and bolter from the Canadian Soo.

The Goldie & McCulloch Company, of Galt, Ont., recently installed a 300 horse-power Wheelock engine in the factory of Davidson & Thackray at Ottawa.

The Victoria Machinery Depot Company, of Victoria, B. C., are furnishing three large boilers for the saw mill of the Victoria Lumber Company at Chemainus.

The works of the Canadian Oak Belting Company at Brockville, Ont., were damaged by fire on December 11th to the extent of $3,000. The loss is covered by insurance.

M. Mitshkun Company, railway equipment supply dealers of Detorit, Mich., have opened a branch office in Chicago, for the accommodation of their Chicago and western customers. The office is located at 711 Western Union Building.

The Dodge Manufacturing Company, of Toronto, have secured the contract for the entire equipment of elevating, conveying and power transmission machinery for the large elevator now under construction in the Montreal harbor.

The M. Garland Company, of Bay City, Mich., have just shipped three of their patented log loaders for handling heavy coast timber to the Eby Machinery Company, of San Francisco. A large number of these log loaders are being shipped to western mills.

The larrigan factory of J. S. Henderson at Parrsboro, N. S., was almost totally destroyed by fire on November 28th. The factory was one of the largest of its kind in the eastsen provinces. It is understood that the loss is partially covered by insurance, and it is hoped that Mr. Henderson will rebuild.

The Syracuse Smelting Works advise us that owing to the large demand for their celebrated Syracuse babbitt metal and Columbia phosphor tin, they have been obliged to run their Montreal plant day and night. They are now further increasing their facilities for manufacturing the above metals, and intend to have all orders hereafter filled promptly.

N. Thompson, late manager of the Albion Iron Works, of Vancouver, T. Smirl and W. McCulloch have formed a partnership under the name of N. Thompson & Company, and have established an engineering and machine shop at Vancouver. It is proposed to make a specialty of logging camp outfits and repairs. Their works are situated on Alexander street.

Those of our readers, and we presume they are in the majority, who require machinery, will be interested in the extensive list of new and and second-hand machinery for the use of lumbermen and wood-workers printed in the advertisement of Mr. H. W. Petrie on page 4 of this number of the LUMBERMAN. A similar announcement will appear each month in future on this gage, and it will be to the interest of machinery buyers to scan the list month by month.

The Standard Dry Kiln Company, of Indianapolis, have issued a neat booklet describing the "Standard" kiln equipment and moist air system of drying, in which are shown views of "Standard" transfer car loaded with lumber end-wise, cross-wise and on edge. A feature of the book is extracts from testimonial letters received from users of the "Standard" apparatus, among which we notice the names of the J. C. Scott Company, Toronto; Shultz Bros. Company, Brantford; Patent Clothboard Company, Parry Sound; J. Oliver & Sons, Ottawa; R. Thackray, Ottawa; J. B. Smith & Sons, Toronto; Pacific Coast Lumber Company, Vancouver; J. A. Sayward, Victoria, and Kootenay Lumber Company, B.C.

The American Blower Co., of Detroit, Mich., report among recent orders for dry kilns the following: H. Hermann Lumber Co., Ashland, Ky., Grand Rapids (Mich.) Piano Case Co., Nicholson Furniture Co., Huntington, W. Va., Michigan Elm Hoop Co., Grand Rapids, Mich., Otter Creek (Fla.) Lumber Co., Trexler-Turrell Lumber Co., Rickets, Pa., and the Sebewaing (Mich.) Sugar Co.; also heating contracts for the Iron City Sanitary Mfg. Co., Zelienople, Pa., Enterprise Mfg. Co., Columbiana, O., B. F. Lee Co., Braddock, Pa., Monongahela (Pa.) Forge Co., New York Glucoss Co., Edgewater, N.J., and the Michigan Malleable Iron Co., Detroit; mechanical draft apparatus for the International Paper Co., (Corinth, N.Y., Mill), Geo. H. Hammond Co., Chicago Lehigh Valley Coal Co., New York, Princeton (N.J.) University and the Binghamton (N.) Electric Light & Power Co.

BABBITT METAL.

In the original recipe for babbitt metal the ingredients were:

Four pounds of copper (lake), 8 pounds regulus antimony, 96 pounds Banca tin.

First melt the copper, then add 12 pounds tin by degrees; put in 8 pounds antimony, and 12 pounds more tin should be added while composition is melting. This forms the hardening which is to be used with tin in proportion of 1 to 2 when casting.

—McBride & Schoeoleben, lumber merchants, Weyburn, N. W. T., have adopted the style of The Weyburn Lumber & Elevator Company.

—The saw mill at Wiarton, Ont., which has been operated for some years by Jones Bros., has been purchased by G. Kastner, who has also secured their timber limits on the peninsula. It is the intention to move the mill to the north shore, where Mr. Kastner will conduct lumbering operations on an enlarged scale.

To Those Who Carry Insurance on Lumber

You are compelled to pay more for your insurance to-day than a year ago. This is particularly true in Canada where rates have been abnormally increased by Tarriff Association Companies. It is our business to insure nothing but lumber. We study the advantages offered by each risk submitted and accept only the best moral and physical hazards. Thus by carrying only selected risks we can offer lower rates. We are saving money for hundreds of lumber dealers. Why not let us take care of from $1,000 to $20,000 of your insurance?

For information apply direct to our home office,

NOTE: Any Lumberman, Sawyer or Filer who will write for one of our Souvenir Watch Fobs may secure same Free of Charge. Mention this Journal.

WOOD PULP DEPARTMENT

REQUISITION FOR AN EXPORT DUTY.

A meeting of the pulp and paper manufacturers of Canada was held at the Windsor Hotel, Montreal, on December 2nd, for the purpose of considering the presentation of a memorial to the Dominion Government requesting an export duty on pulp wood. It is understood that opinion was unanimous that such action should be taken.

It was accordingly decided without a dissentient voice that a committee, after consulting the Government of the province of Quebec with the view of devising means whereby the views of the manufacturers could be carried out, while at the same time the requirements of the provincial authorities should be complied with, proceed to Ottawa and interview the federal Government for the purpose of securing the imposition of an export duty, which, while not onerous during the first and second years, so as not to interfere with the present export business, would, at the same time, give opportunity to all present owners of timber limits to erect pulp or paper mills if they think it necessary, and should progressively advance until such a figure should be charged as would afford reasonable and yet complete protection to the pulp and paper interests of this country.

Those in attendance at the meeting were: E. B. Eddy, of the E. B. Eddy Company, Hull; John R. Barber, of Barber Bros., Georgetown, and the Toronto Paper Mfg. Company; F. P. Buck, president of the Royal Paper Mills Company; Walter Wray, of Price Bros. & Co., Jonquiere Pulp Company, Montmagny Pulp Company, and Rimouski Pulp Mills; J. E. Valliere, of Jas. McLaren & Co., Buckingham, Que.; W. D. Gillean and A. McArthur, of A. McArthur & Co.; C. F. Smith, vice-president Laurentide Pulp Company, Grand Mere, Que.; J. D. Rolland, of Rolland Paper Company; John Ford, of John Ford & Co.; John Macfarlane, president St. Raymond Pulp Company; A. MacFarlane and Robt. Miller, of Miller Bros. Company; W. Jalbert, Ouiatchouan Pulp Company; F. J. Campbell, general manager Canada Paper Company; Wm. Hanson, director of Quebec & Lake St. John Railway Company; J. E. Caron, M.L.A., secretary Metabetchouan Pulp Company; F. Florentin Soucy and Wm. Ayers, Hamelin & Ayres; N. Garneau, president Chicoutimi Pulp Company; Jas. Davy, Merritton Pulp Company, and John Forman, Montreal.

THE ST. GEORGE PULP AND PAPER COMPANY.

At St. George, in Charlotte County, N.B., a syndicate of United States capitalists have undertaken an extensive project with a view to the manufacture of pulp and paper. The settlement of St. George is situated on the Magaguadadic river. In the summer of 1901 Messrs. James Goodfellow, of Fort Fairfield, N.Y., and E. W. Murphy, of Albany, N.Y., organized the St. George Pulp and Paper Company. They purchased the necessary water power and rights, also fifty square miles of timber lands from J. Dewar & Sons. The contract for turbines required for the power development was placed with the Jenckes Machine Company, of Sherbrooke, Que., who are to furnish two pairs of 45-inch special Crocker turbines and two pairs of 20-inch special Crocker turbines, all in steel cases and arranged for horizontal setting, to be capable of developing 2,668 horse power under 40 feet effective head of water.

The water necessary for the supply of the turbines is to be carried through a steel plate riveted pipe 16 inches in diameter and 450 feet long, also supplied by the Jenckes Company. The penstock has just been erected by their workmen on the site of the mill, it having been punched, rolled, fitted together, and painted at their works before shipment.

The mill will be located on a peculiarly advantageous site. It will be one-storey high, 65x120 feet, and will have a daily capacity at the outset of 20 tons of pulp, but this will be ultimately increased to 50 tons. The Jenckes Machine Company have also received the contract to supply the pulp mill machinery, including grinders, wet machines, screens, barkers, cutting off saws, hydraulic press, baling press, conveyers, etc. The screens to be used are the celebrated Moore centrifugal screens, a comparatively new invention.

The mill is to be lighted by electricity and steam heated. The electric plant will be furnished by the Westinghouse Electric & Manufacturing Company, of Pittsburg, Pa. In addition to supplying electricity for their own use, the company expects to develop 750 horse power to be furnished to the Granite Company whose water power they acquired. Electric lighting may also be furnished for the corporation of St. George.

The operations are being conducted under the supervision of Mr. E. G. Murphy, who is manager of the company.

PULP NOTES.

Surveys are being made for a pulp mill to be built at Baring, N.B.

The Riviere Ouelle Pulp & Lumber Company, of St. Pacome, Que., is applying for incorporation.

P. Holmberg, representing Cleveland and Pittsburg capitalists, has taken steps towards the erection of a paper mill at Sprindale, Kings County, N.B.

The Ontario Government have given permission to the Sturgeon Falls Pulp Company to dam Lake Temagami for the purpose of securing a more regular water supply.

The by-law to grant a bonus of $15,000 to assist J. J. Warren, of Toronto, and others, to establish a pulp mill at North Bay, Ont., will be placed before the ratepayers of that town on January 5th.

An aerial cable is to be used to convey to market the pulp of the new 25-ton mill to be built near Rimouski, Que. This method is found advisable on account of the rugged country and the deep snow in winter.

The Nova Scotia Wood, Pulp & Paper Company have almost completed the enlargement of canals, etc., by which the available power will be increased 100 per cent. They are rebuilding their pulp mill and expect to grind again in February.

J. C. Wilson & Company, Limited, has been incorporated, with a capital stock of $1,000,000, to take over and conduct the business of J. C. Wilson & Company, paper manufacturers, Montreal. Power is also given to acquire timber limits and manufacture pulp.

The Quatsino Power & Pulp Company, Limited, of Victoria, B.C., have elected the following officers: President, Henry Hewitt, Tacoma, Wash.; vice-

OFFICES: Temple Court Building, Beekman and Nassau Streets, - - NEW YORK

president, W. G. Dickinson, Victoria; secretary, C. H. Lugrin, Victoria; treasurer, E. E. Welsch, Victoria. Preliminary to beginning the manufacture of pulp the company will establish a saw mill at Quatsino.

P. C. Hohlenburg and J. T. McNeill, of Cleveland, Ohio, representing an American syndicate, recently secured an option on the properties of William Bruckhof and William Godard at Springdale, Kings County, N.B. It is understood that if the option is taken up a pulp mill will be erected on the property.

An idea of the importance of the pulpwood industry in the Eastern Townships of Quebec, is shown by the fact that the Quebec Central Railway alone has carried 80,000 cords of this wood since last spring. This wood cost $20,000 to load on the cars and yielded the railway $100,000 in freight. Farmers sell the wood for $4 per cord, when barked, and four feet in length.

The December meeting of the American Sulphite Manufacturers' Association was held in Boston on the 3rd ultimo, among those present being Charles Riordon and George E. Challes, of the Riordon Paper Mills, Merritton, Ont., and M. F. Mooney, of the St. John Sulphite Pulp Company, Mispec, N.B. It is understood that the reports submitted showed that the mills were well sold up, with very small stocks on hand.

F. H. Clergue, of the Sault Ste. Marie Pulp & Paper Company, does not fear a retaliatory duty on pulp imported into the United States. He contends that the extra duty would have to be paid by the consumer, and that if the law were applied in the case of pulp, by a parity of reasoning it must also be applied with respect to lumber. This would bring about an awkward situation, as many American companies have built large saw mills in Canada.

A very distinguished party of British merchants and manufacturers, representing the London Chamber of Commerce, who are now touring Canada, were banqueted by the Canadian Manufacturers' Association in Toronto on November 21st. In the speeches the pulp wood question was repeatedly referred to. Hon. G. W. Ross, Premier of Ontario, pointed out that England consumed 504,000 tons of wood pulp annually, of which only 78,000 tons came from Canada. He advocated the building of British mills in Canada and the consolidation of the empire by each part purchasing as much of its supply as possible from some other part, instead of from a foreign country.

The Toronto Globe is not in favor of an export duty on pulp wood. Summing up the situation it says: "It is clear that the export duty will accomplish everything the paper manufacturers desire, but not so clear that it can be imposed without inflicting serious hardships on many settlers and other owners of pulp wood. Canada is too fully dependent on the advance of settlement to risk the restoration of early and onerous conditions until it is clear that important public interests are to be served by the change. The paper-making industry is entitled to every consideration, and its interests should be furthered in every way so long as no other Canadian interest is adversely affected."

PERSONAL.

Mr. J. Arbuthnot, lumber merchant, of Winnipeg, has again been elected Mayor of that city.

Mr. Alfred Dickie, of Lower Stewiacke, N. S., expects to sail in a few days for Liverpool, England, on a business trip.

In the recent by-election in Argenteuil county, Quebec, Mr. G. H. Perley, lumberman, of Calumet, was defeated by a majority of 201 votes.

Before leaving on an extended tour through California and the Southern States, Mr. C. Mayne, manager of the Royal City Planing Mills, Vancouver, was presented with an address and a gold watch by the employees of that concern.

Mr. Joseph H. O'Neill, of the Edwin S. Hartiwell Lumber Company, Chicago, who has had charge of the company's operations at Parry Sound, Ont., the past season, returned to Chicago early in December, intending to remain there for a few weeks.

A serious accident occurred recently to Mr. H. H. Cook, president of the Ontaria Lumber Company, of Toronto. A street car from which he was alighting started somewhat prematurely, with the result that Mr. Cook was precipitated to the pavement, breaking his left leg above the ankle and receiving a serious shock to his system. For some time he remained unconscious, but by the aid of skilful medical attendance we are pleased to learn tnat he is now rapidly regaining convalescence.

—Under the name of Donald McNicol at Lammermoor, Ont., is conducted a saw mill industry that has quite a unique history. The father of the present owner established his plant on the Little Clyde in 1825, but since that time the mill has been rebuilt twice, at each rebuilding improvements being made.

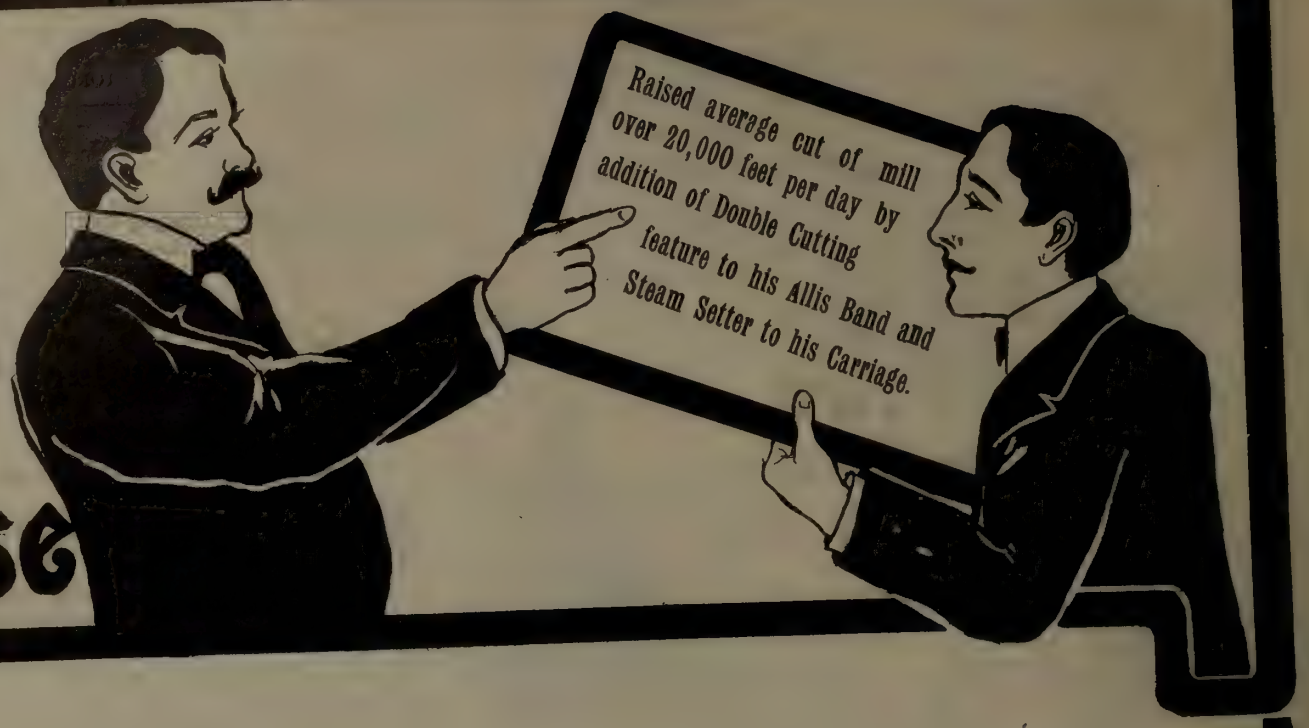
A Record Increase



The daily average for the season of 91,000 feet on an Allis Double Band Mill and Gang is an argument more eloquent than words to prove that this mill in actual performance will bear out our claim that it will increase the output of your band mill from 30 to 40 per cent.

The following letter is particularly interesting in its bearing upon the merits of the Allis Double Cutting Band:

PARRY SOUND, November 6, 1902.

WATEROUS ENGINE WORKS, Brantford.

DEAR SIRS:—Replying to yours of the 27th ult. in regard to the merits of the double cutting band mill and steam set works over single cutting and hand set works, I beg to say that very much better results have been obtained with double band mill and steam set works, the average daily cut this season being some 91,000 feet per 11 hours, to 54,000 last year. The saw culls will not exceed 7,000 feet out of about 18,000,000 feet of lumber. Yours truly,

J. J. GRANT, Supt. Conger Lumber Co. Saw Mill.

Last year the above firm had a single cutting Allis Band and Gang. This year by the change from the single to double cutting band and the addition of a steam setter to the carriage the output was increased over 60 per cent This increase was gained without added cost for labor and therefore means a corresponding increase in the daily profits of the business, and the saw cull loss was practically eliminated.

Write us and let us tell you more about the actual performances of the Allis Double Cutting Band Mill and Steam Setter.

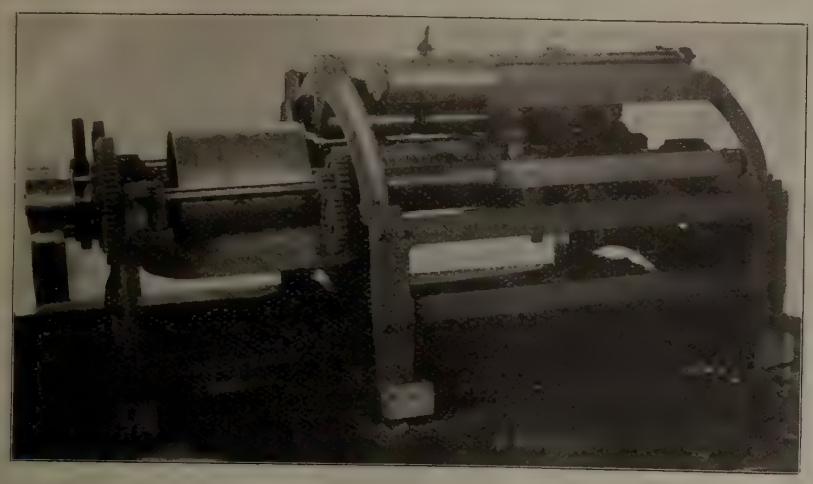
Write us and we will tell you all about our



Combination Gang Edger

The above cut represents what we call a 60-inch machine, i. e., the entire length of the feed rollers is 60 inches. The arbor is arranged with a gang of eleven saws for manufacturing 1-inch lumber from cants 4, 6 and 8 inches through. The balance of machine is arranged with three moveable saws, one stationary or fast.

With this machine the cut of a mill can be increased at least 25 per cent. without any additional expense for labor, as a great deal of the sawing which is now done on the band or circular can be done on this machine. It has rift flooring attachments, and is without question the best machine on the market. It has been in use in the larger mills for many years.

Read and Reflect

RHINELANDER, WIS.

Rodgers Iron Manufacturing Co., Muskegon, Mich.

Gentlemen :—Replying to yours we will say that the combined flooring mill and edger is doing good work and that we have no fault to find with it, as it is a very satisfactory running machine.

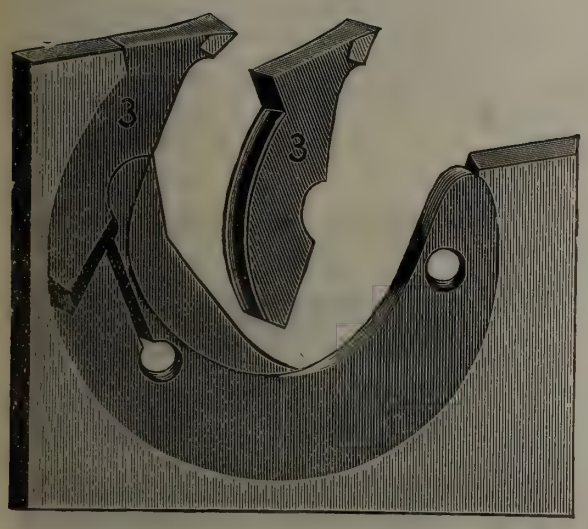
R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

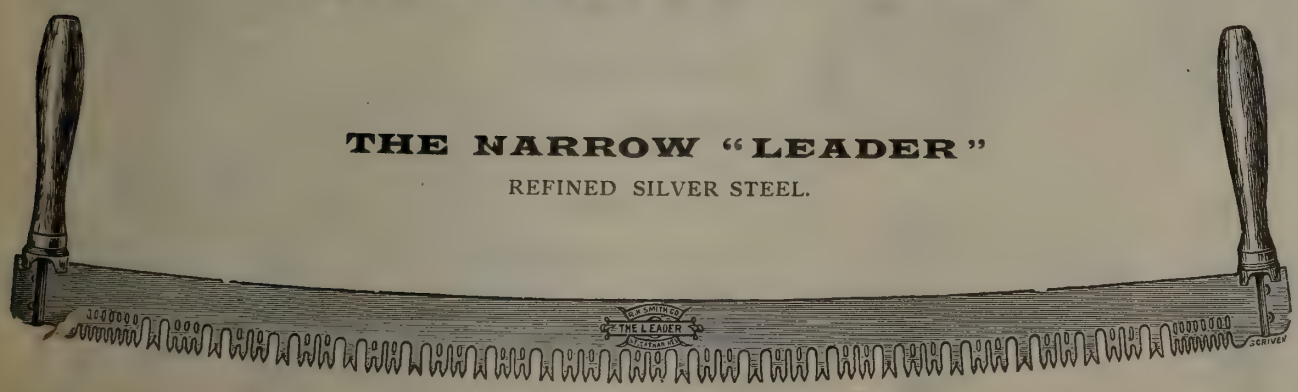
Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS



The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

STUDY ITS MERITS

The Dodge Wood Spilt Pulley for power transmission deserves the careful thought of every power consumer.

The Dodge Wood Spilt Pulley will withstand a higher rim speed than iron and is not sensitive to sudden loads or shocks.

They reduce centrifugal force to a minimum.

Their construction avoids shrinkage strains as in casting an iron pulley.

Accidents from broken pulleys and fly wheels are unknown when Dodge Wood Split Pulleys are used.

The ratio of friction to pressure for leather belts when run over Dodge Wood Spilt Pulleys is 47, over turned cast iron pulleys it is 24.

The Dodge Wood Spilt Pulleys are safer, stronger, cheaper, than any other pulley made

THE CANADA LUMBERMAN

VOLUME XXIII. NUMBER 2. TORNTO, CANADA, FEBRUARY, 1903 TERMS, $1.00 PER YEAR Single Copies, 10 Cents

AN OTTAWA LUMBER FIRM.

One of the young but aggressive and progressive firms of lumber shippers in the Ottawa district is Messrs. Hurdman & Elmitt, whose offices are located in the Central Chambers, Ottawa. Established in 1898, the firm has enjoyed a remarkable growth of business. The members, Mr. G. Charles Hurdman and Mr. Thomas F. Elmitt, are young men, each possessing practical and full knowledge of the lumber business, and each giving its operations their personal attention. They buy direct from the mills. All lines of Canadian lumber, hardwoods, pine, spruce, lath and shingles, are handled, and in quantities that make exacting assortment and quick delivery possible. The firm has the very best of shipping facilities, and can handle stock in both barge and car lots.

Mr. G. Charles Hurdman is a born lumberman. He is the eldest son of the late George Hurdman, of Ottawa, one of the founders of the original firm of Hurdman Brothers, afterwards Buell, Orr & Hurdman, and now the Hull Lumber Company. Mr. Robert Hurdman, the present well-known timber operator, is an uncle of the subject of the sketch. The late Mr. W. H. Hurdman was similarly related. On his mother's side Mr. Hurdman is connected with a prominent family of lumber operators. The late Charles Tucker, one of the organizers and principal shareholders of the St. Paul and Tacoma Lumber Company, of Tacoma, Wash., was his uncle.

MR. G. CHARLES HURDMAN.

MR. THOMAS F. ELMITT.

The first five years of Mr. Hurdman's career in the business found him "up river," the term commonly used to describe the timber limits as a base of operations. There he obtained a mastery of the details of the bush end of the business, which has stood him well in his present position. Determined to secure an all-round knowledge, and especially that relating to the mill and yard, Mr. Hurdman entered the services of the Shepard & Morse Lumber Company. He remained with that concern five years, and was advanced to the position of manager of the yard. He severed his connection with the firm to enter into partnership with Mr. Elmitt. He has a thorough knowledge of selling, sorting and shipping. Hurdman & Elmitt have numerous customers who know the firm only through the mails and the stock they ship.

Few men in the business have a better or more thorough knowledge of the mill and manufacturer's end of the lumber trade than Mr. Thomas F. Elmitt. Years of study and service have enabled him to grasp every detail and apply to it a sound judgment, perfected by experience. In the mill, yard and office he is as much at home as the saw before the log. Mr. Elmitt is in close touch with the American and Canadian markets, and the firm's customers find in him a man who has the happy nack of filling every requirement of every order.

His boyhood days found him in the employ of the old-time white pine house of Bronson & Weston, then conducting operations that included in their scope every branch of the lumber business as carried on in Ottawa and the Ottawa Valley. His keen discernment and intelligently applied industry earned him promotion, and ultimately advanced him to a more responsible position in the employ of the Shepard & Morse Lumber Company, of Ottawa. He was associated with their business in various capacities for a period of six years, severing his connection to accept the position of yard superintendent with the St. Anthony Lumber Company, with mill at Whitney Station, on the western branch of the Canada Atlantic Railway. His experience in this latter capacity might be termed a post-graduate course in lumbering, and it rounded out a practical knowledge of every line of the business. Mr. Elmitt is an enthusiastic rifleman, and out of office hours often finds his way to the Rockliffe Range, the Canadian "Sea Girt," where many a bull's-eye has been marked to his credit.

Hurdman & Elmitt handle a large quantity of hardwoods as well as their extensive pine trade, and are always in the market to buy either large or small quantities.

CANADIAN FORESTRY ASSOCIATION.

Arrangements are being rapidly completed for the third annual convention of the Canadian Forestry Association, which will be held in Ottawa on March 5th and 6th. It is hoped that there will be a large attendance, as the subjects to be discussed will be of very special importance at the present time and of the greatest practical moment to the future of the lumber industry.

The programme as already arranged will include th following papers: "The Laurentide National Park," by W. C. J. Hall, of the Crown Lands Department, Quebec; "The Fire-Ranging System of Ontario," by Aubrey White, Assistant Commissioner of Crown Lands for Ontario; "Tree Planting in Manitoba," by A. P. Stevenson, of Nelson, Man.; "Forest Conditions in New Brunswick," by His Honor J. B. Snowball, Lieutenant-Governor of New Brunswick; "The Growth of Forest Trees at the Arboretum of the Experimental Farm," by W. T. Macoun, Horticulturist; "Forestry in Relation to Irrigation," by J. S. Dennis, Irrigation Commissioner for the Canadian Pacific Railway Company in the North-West Territories. It is also expected to have papers from Nova Scotia and British Columbia, but final arrangements have not yet been made in regard to them.

A WELCOME VISITOR.

Mr. Jasper Martin, of Hillsdale, Ont., in renewing his subscription to the CANADA LUMBERMAN, writes: "The paper contains much valuable information and is a welcome weekly visitor."

ANNUAL LUMBER TRADE REVIEW

Statistics of the Production and Export in 1902.—A Year of Prosperity and Favorable Conditions.—Advance in Prices Partially Offset by Increased Cost of Labor and Supplies.

HE would indeed be a pessimist who could not find cause for congratulation in a retrospective glance over the lumber trade of the year 1902. From start to finish business was healthy. The lot of the salesman was an enviable one, inasmuch as lumber practically sold itself. From the Atlantic to the Pacific, and from the best grade of white pine down to the lowest grade of hemlock, the application of a steady demand, firm prices and liberal profits can fairly be made. As one reflects upon the prevailing conditions and volume of business, he is disposed to designate the past year as the "banner year" in the history of the lumber industry of the Dominion.

As long as logs were available the mills were kept in operation, but in some provinces, especially British Columbia, there developed a scarcity of raw material, which resulted in curtailing the lumber production. The high cost of timber, as well as of labor and supplies, was one of the distinctive features of the year, and had it not been for the abnomal expense in that direction, the profits of manufacturers would have been much greater. It is estimated that the cost of placing logs at the mill has increased 50 per cent. within three years. As matters stood, the lumber business of the year was conducted on a satisfactory margin of profit.

The domestic demand for lumber was heavy. Manufacturing industries using lumber as their raw material were operated to their full capacity, and there was an expansion in building operations, particularly in Manitoba and the Territories, where an abundant crop of grain was harvested. The figures of export trade make a favorable comparison with the previous year. Quebec and New Brunswick show increased shipments to Great Britain, Australia, South Africa and other distant countries, but the most substantial gain was doubtless made in the United States trade, of which complete statistics are not yet obtainable. The figures for the fiscal year ending June 30th, and for the eleven months ending November 30th, 1902, not only reflect the increased shipments, but also the advance in the value of lumber. In the following table of lumber exports to the United States for the past ten fiscal years, the valuation is based on the buying price in this country.

LUMBER EXPORTS TO UNITED STATES.

Year.	Quantity, feet.	Value.	Per M. feet.
1892	663,226,000	$7,540,700	$11.37
1893	742,351,000	8,217,331	11.06
1894	514,461,000	6,134,204	11.92
1895	600,790,000	6,859,078	11.41
1896	786,001,000	8,503,641	10.82
1897	883,770,000	9,073,312	10.26
1898	353,134,000	3,499,569	9.91
1899	423,720,000	4,186,664	9.88
1900	680,069,000	7,464,208	10.97
1901	490,570,000	6,343,836	12.93
1902	664,751,000	9,288,970	13.88

Excepting the year 1897, the shipments to the United States in 1902 were the largest on record. It may be pointed out that the large trade in 1897 was due to the fact that the Dingley bill took effect on July 24th of that year, and every effort was made to get lumber across the border before that date in order to avoid the payment of a duty.

For the eleven months ending November 30th there were shipped from Canada to the United States 689,765,000 feet of lumber, of a value of $9,988,630, and 725,453,000 shingles, of a value of $1,451,713. The lumber business showed an increase in shipments over 1901 of 26 per cent., and in value of 40 per cent. The average price was $14.51 per thousand feet, whereas in 1901 it was $13.70. The average price of shingles was a trifle over $2 per thousand, while in 1901 it was $1.89.

The advent of the year 1903 found very light stocks in the hands of manufacturers, and the past month has given every promise that the prosperous conditions will continue throughout this year at least. The outlook for building and railroad construction, and the condition of foreign markets, offer little ground on which to base the hope of decreased demand and lower prices, although some slight recession may be witnessed in the price of special stocks which, on account of a temporary scarcity, have been advanced too rapidly.

ONTARIO.

It would be difficult to find a lumber manufacturer in Ontario who is not well satisfied with the trade of 1902. Both pine and hardwoods were in splendid demand, and in this respect the year differed from its predecessor, when hardwoods were inactive and depressed. Quick sales, high prices and fair settlements were the rule, but the cost of manufacture increased so enormously that only a small percentage of the increased revenue found its way into the pockets of the manufacturers. Mill stocks were held in strong hands and were difficult to obtain, so that the profits of jobbers were light.

Record prices were reached during the year for the best grades of white pine, which were in short supply. Clear and picks which in 1901 sold from $25 to $34 per thousand were readily saleable last year at from $35 to $45. In common lumber there was an advance of about $2 per thousand, while mill culls remained about stationary. In the fall there was an advance of $2 per thousand in red pine, which earlier in the year had been quiet. Hemlock was heavily bought, bringing about $10 at the mill, a gain of $1. Lath and shingles were in constant demand at an average advance of 15 and 25 cents respectively.

For well sustained and well distributed prosperity the year was about the best the hardwood trade has yet experienced. Price changes were not erratic, but were in the direction of an advance and of such a nature as to create a belief in a further general appreciation in the price of hardwood lumber. Basswood, black ash and elm were the leaders, the former advancing in price about 15 per cent. The scarcity of white pine for siding and interior finish brought basswood to the front as a substitute, and for the past six months that lumber has been practically unobtainable.

Ontario exported an immense quantity of lumber to the United States, that market seemingly being more willing than Great Britian to pay the advanced prices. It is estimated that upwards of 200,000,000 feet of pine was shipped from the Georgian Bay district to the States of Michigan and Ohio and the city of Chicago. The Ottawa Valley production found an outlet in the usual channels, although a slightly larger quantity was marketed in the United States than in 1901.

The production of lumber was heavy. The mills were pretty well supplied with logs and continued in constant operation until late in the season. Nevertheless, the demand was sufficient to absorb the supply, and at the close of the year the quantity of unsold stock was exceptionally small. It is many years since the stock of all kinds of lumber has been reduced to such a low point.

It is difficult to obtain accurate statistics of the white pine production, but the following figures are believed to fairly represent the cut of mills at the places named, which include the leading pine producing points of what may, broadly speaking, be termed the Georgian Bay district :—

GEORGIAN BAY PRODUCTION.

Place.	Feet B. M.
Midland	70,000,000
Parry Sound	60,000,000
Sarnia	50,000,000
Byng Inlet	48,000,000
Little Current	40,000,000
Blind River	38,000,000
Waubaushene	30,000,000
Sandwich	23,000,000
Collingwood	23,000,000
Penetang	23,000,000
Cutler	20,000,000
Gravenhurst	20,000,000
Spragge	20,000,000
Victoria Harbor	42,000,000
French River	18,000,000
John's Island	17,000,000
Spanish River	16,000,000
Bracebridge	14,000,000
Huntsville	15,000,000
Severn	10,000,000
Cache Bay	17,000,000
Callendar	6,000,000
Bobcaygeon	6,000,000
Warren	5,000,000
Powassan	3,000,000
Thessalon	7,000,000
Other Algoma Points	20,000,000
Total	661,000,000

NOTE.-The above figures apply exclusively to the production of pine at the points named, no account having been taken of the cut of hemlock lumber, shingles, lath, etc. In one or two instances where definite information was not forthcoming, it has been assumed that the cut was the same as in 1901.

Reliable returns go to show that the lumber cut of the Ottawa district last year was in the aggregate only slightly in excess of that of the previous year, reaching 614,000,000 feet, as against 611,000,000 for 1901. Ross Bros'. mill at Buckingham was operated in 1902 by the McLaren Estate and the cut is accordingly included with that of the latter company's mill, making 25,000,000 in all.

The following are the figures for the different mills:

OTTAWA VALLEY PRODUCTION.

	1901—Feet.	1902—Feet.
J.R. Booth, Ottawa	125,000,000	125,000,000
Gilmour & Co., Trenton	25,000,000	13,000,000

QUEBEC.

The year 1902 opened with the outlook for spruce lumber somewhat uncertain, but it was not long before the dark clouds on the horizon had disappeared and business was proceeding in a very satisfactory manner. Prices gradually strengthened, especially for export stock, and profits would have been much larger but for the increased cost of production. Labor was scarce and wages high. The cream of the year's business accrued to the manufacturers of spruce clapboards, which brought $40 at the mill as compared with $30 the previous year. In hemlock there was an advance of $1, the average price being about $10. Stocks at the close of the year are light in all grades, with the inferior grades predominating.

The total trans-Atlantic shipments from the province show a decline, in round numbers, of 39,000,000 feet. This is due chiefly to two causes, namely, increased exports to the United States, and the shipment of a large quantity of our lumber to Great Britain via United States ports. Boston furnishes a striking illustration of the latter, the figures of Canadian lumber exports from that port for three years being as follows:

Year.	Feet.
1900	7,343,000
1901	12,789,000
1902	25,847,000

There conbines to be extreme difficulty in shipping through the St. Lawrence ports, and expecially Montreal, owing to high insurance rates and inadequate loading facilities.

The record of Montreal lumber shipments shows an increase of 18,000,000 feet, while Quebec, Three Rivers and other St. Lawrence ports are credited with a decrease of approximately 56,000,000 feet.

In board measure the total trans-Atlantic shipments of timber, deals and sawn lumber from port of Montreal for the past two years were as follows:

Shippers.	1902. Ft. Bd. M.	1901. Ft. Bd. M.
Watson & Todd	51,311,775	66,107,435
W. & J. Sharples	42,344,225	26,322,102
Dobell, Beckett & Co	40,711,000	36,695,912
R. Cox & Co	30,326,457	31,736,125
J. Burstall & Co	20,066,117	22,521,217
The Charlemagne & Lac Oureau Co	14,428,674	10,863,809
McArthur Export Co., Ltd	13,508,543	10,411,035
McLaurin Bros	7,000,000	5,348,000
Cox, Long & Co	4,997,726	4,653,236
E. H. Lemay	2,335,000	2,472,000
Railways, small shippers, etc	11,442,596	4,293,979
Total	240,472,113	222,424,850

Only 353,492 feet of lumber was shipped from Montreal to South America.

The annual timber circular of J.B. Forsyth & Company, compiled by E. J. Dalkin & Company, gives the following particulars of the timber trade of Quebec:

WHITE PINE.— Square shows a diminished wintering stock, resulting from a decreased supply, as the export has been about same as the preceding year. In waney an increased supply has been more than counterbalanced by a larger export. In both the stock is again the highest on record, with no probability of an adequate production unless consumption is checked by the repeated advances in price.

	Supply.	Export.	Stock.
1902 Square	384,440	2,445,548	395,962 Square
1902 Waney	1,830,120		261,393 Waney
1901 Square	545,432	2,317,443	589,561 Square
1901 Waney	1,446,889		361,488 Waney

RED PINE.—The supply and stock continue to decrease, and it is quite evident that in a few more years the manufacture and export of this wood as Square timber will come to an end.

	Supply.	Export.	Stock.
1902	71,160	80,190	66,998
1901	89,917	86,535	78,084

OAK.—The wintering stock shows a moderate increase on the figures of last winter, which were the lowest on record. The demand for this wood is largely supplied by sawn scantling and cheaper hewn oak from United States ports. The present advance in price was necessary to enable producers to continue making, and is the first established for many years, but it must not be forgotten that any considerable increase in production would result in a reaction.

	Supply.	Export.	Stock
1902	653,520	578,121	192,162
1901	498,261	516,437	126,874

ELM.—The supply has fallen to little more than half that of the preceding year. The stock figures are quite misleading, as they include a large quantity of soft elm that has remained unshipped over season. There is a light stock of first-class rock elm, and unless this wood is to go out of production the price must materially advance.

	Supply.	Export.	Stock.
1902	561,920	586,777	539,183
1901	1,023,372	548,869	594,922

ASH.—A decreased supply leaving an increased stock shows an absence of demand. Small wood is almost unsaleable, and even large wood is not readily placed. Production will certainly be very light.

	Supply.	Export.	Stock.
1902	79,902	49,970	49,818
1901	135,245	118,074	25,430

BIRCH.—A reduced production consequent on increased cost of manufacture and growing scarcity of readily available wood has resulted in a better demand at increased prices. It must be remembered that in addition to Quebec shipments considerable quantities are exported from Portland in winter and Montreal in summer, and that such wood is similar to that sent from this port.

	Supply.	Export.	Stock.
1902	260,200	247,390	5,739
1901	291,786	304,584	7,721

SPRUCE DEALS.—A large decrease is shown in production and export, not only on last year's high figures, but also on preceding years. Values have increased very materially, but do not more than meet increased values of stumpage and cost of production. The stock is about similar to the very light one of last year.

	Supply.	Export.	Stock.
1902	130,250,567	129,006,397	8,232,790
1901	189,768,122	185,303,399	6,958,820

PINE DEALS.—The Ottawa mill cuttings have been placed at an advance of about 10 per cent. over previous year, which States market demand fully justified. Culling generally appears to have approximated to the old standard on the average, but will never return to the extreme level to which it was forced previous to the change. The figures given below are only for Quebec.

	Supply.	Export.	Stock.
1902	3,201,870	3,148,200	286,375
1901	10,550,512	10,448,295	331,705

SAWN LUMBER. — Local consumption has been very large, and the constantly increasing demand from the United States has advanced prices to such an extent that little or nothing has been shipped to River Platte, the market there being unable to respond to the advance demanded by shippers.

From ports east of Montreal the following shipments were made:

	Quebec Feet.	Three Rivers and Pierreville. Feet.	Others Ports. Feet.
Dobell, Beckett & Co	30,281,500	20,782,200	5,180,200
W. & J. Sharples	27,557,640	7,100,800	.....
Price Bros. & Co	.....	.....	50,260,000
McArthur Ex. Co	12,520,764	.....	.....
J. Burstall & Co	4,316,794	.....	.....
H. R. Goodday & Co	22,683,404	.....	.....
King Bros, Ltd	11 000,000	.....	.....
Harold Kennedy	7,879,000	.....	.....
	116,189,102	27,882,200	55,440,200

THE MARITIME PROVINCES.

Without an exception the lumber manufacturers and shippers of the Maritime Provinces report that the past year was more satisfactory than its predecessor. Constant buying for local and export trade kept the market steady throughout the year, and the close of 1902 found prices of spruce lumber materially higher than twelve months earlier. Clapboards, which commenced to improve in the fall of 1901, continued to gain strength, and were easily the feature of the year, closing with the substantial advance in price of fully $6 per thousand, the quotation for first quality on Boston rate of freight being $43. The advance was due solely to the scarcity of stock.

Ordinary spruce lumber for the United States market made a gain for the year of about $2 per thousand and hemlock lumber $1. New Brunswick cedar shingles followed the lead of clapboards, extras ending the year with a gain of 50 cents per thousand and other grades from 10 to 20 cents.

Early in the year spruce deals for the British market took a sharp rise, which was maintained throughout the season. In 1901 the ruling price was $10.50, whereas last year most of the stock realized from $11.50 to $12. Stocks held over are light and consist largely of 8-inch and under. South American specifications were active and brought $1 per thousand more than in 1901.

Turning to the volume of trade, we find that New Brunswick shows an increase in trans-Atlantic shipments of 53,000,000 feet, while Nova Scotia is responsible for a decrease of 30,000,000 feet.

While New Brunswick shipments are more than those of 1901, they are 36,000,000 superficial feet less than in 1900 and 41,000,000 superficial feet less than in 1897, and only an average of the years 1897 to 1901 inclusively. One-half of the increase in the shipments from New Brunswick occurs in St. John, and is largely on account of logs left in the brooks during the spring of 1901, that could not be got to market on account of poor freshets. The demand made last winter for lumber to fill up the winter port liners induced the rotary mills to saw all the available stock within easy reach of that port which also accounts to some extent for this increase. Considerable increases also appear in Dalhousie, Campbellton and Sackville.

Miramichi shows a decrease of over 2,700 standards, and as the stock wintering on the river this season is 7,500 standards less than last year, and the operations not any greater than last winter, which was all the mills could

saw, some falling off in the shipments for 1903 is looked for.

A considerable portion of Nova Scotia shipments consists of hardwoods, such as birch, beech and maple, with considerable hemlock; and without these woods the present volume of New Brunswick exports could not be maintained.

In the distribution of the lumber there was little change, Great Britain continuing to be by far the best customer for our eastern spruce. France and Australia took less lumber than in 1901, probably owing to the ruling high prices. The shipments of Canadian lumber from the consular district of St. John to the United States were greater by $20,331.58 in value, made up of an increased export of shingles and lath. American lumber, the product of Maine forests sawn at St. John and shipped to the United States, shows a falling off in value of $268,071.73. The United States Consul furnishes the following statement of St. John shipments:

LUMBER EXPORTS FROM ST. JOHN TO UNITED STATES, 1902.

NEW BRUNSWICK LUMBER.

	First Half Year.	Second Half Year.	Total.
Long lumber	$53,003	$ 61,284	$114,287
Laths	60,202	123.908	184,110
Shingles	3,920	18,608	22.528
Total	$151,918	$344,151	$320,925
Increase over 1901	$20,331.58.		

AMERICAN LUMBER.

BRITISH COLUMBIA.

The lumber and shingle industry of British Columbia witnessed a remarkable expansion in the year under review. The benefit of the law prohibiting the export of timber was illustrated by the erection of many new mills and the creation of new lumber centres. While export trade in lumber shows a falling off, there was a vast improvement in local business and in shipments to Eastern Canada, as well as in prices of timber products generally. No. 1 flooring which in 1901 sold at $21 was marketed last year at $24; common dimension advanced from $10 to $11, and rough culls from $6 to $9. In other grades there was an advance ranging from $1 to $5. At the close of the year shingles showed an appreciation of 30 cents, selling at $1.85 at the mill as compared with $1.55. Many manufacturers, however, did not profit by the increased price, having placed much of their output under contract early in the year before the upward movement had begun.

Great difficulty was experienced in obtaining labor, and the prices paid for logs and shingle bolts were much in excess of any previous year. The scarcity of labor became so pronounced that in the fall some of the manufacturers were compelled to close down for a time. A shortage in the car supply was another worry with which manufacturers had to contend.

The total production of the shingle mills of British Columbia in 1902 was about 560,000,000.

Perhaps the Kootenay district furnishes the best example of the growth of the saw-milling industry in British Columbia. Six years ago there was one small saw-mill in the East Kootenay district south of the Columbia Lakes, and valuable timber limits were passed by as hardly worth noticing. Mills have since been built all along the Kootenay, Moyie and Elk valleys. It is estimated that the cut of the coming season will aggregate 120,000,000 feet. The capacity of the various mills is estimated as follows: Cotton, at Crow's Nest, 2,000,000 feet; Carbon Creek Lumber Company, 2,000,000; Fernie Lumber Company, 5,000,000; Mott & Son Company, Fernie, 5,000,000; Cedar Valley Improvement Company, Fernie and Morrissey, 5,000,000; McCrea Lumber Company, Coal Creek, 5,000,000; Robinson-McKenzie Lumber Company, Cranbrook, 5,000,000; King Mercantile Company, Cranbrook, 5,000,000; Leask & Slater, Cranbrook, 5,000,000; Larrie Lumber Company and Finch & Jones, Marysville, 4,000,000; East Kootenay Lumber Company, four mills, 20,000,000; Crow's Nest Lumber Company, Wardner, 12,000,000; Moyie Lumber Company, Elk Mouth, 2,000,000. At Slocan the Ontario-Slocan Lumber Company is building a mill to have a daily capacity of 100,000 feet.

Only two companies were engaged in the export trade, namely, the British Columbia Mills, Timber and Trading Company, and the Victoria Lumber and Manufacturing Company. Their shipments aggregated about 56,000,000 feet, somewhat less than the total export trade of 1901.

The loss in export trade was due to lighter shipments to South America, China and Japan. Whereas South America took approximately 13,000,000 feet in 1901, less than 9,000,000 feet was shipped to that country last year. Upwards of 12,000,000 feet was shipped in 1901 to China and Japan, an increase over last year of 7,000,000 feet. These losses were made up in part by increased shipments to South Africa, the trade with that country expanding from 4,000,000 feet in 1901 to nearly 11,000,000 feet last year. The shipments to Australia and Great Britain varied but little from the previous year. The figures in detail for two years are given below:

SHIPMENTS BY COUNTRIES.

	1901. Feet B. M.	1902. Feet B. M.
Australia	22,919,807	20,632,584
South America	13,045,214	8,815,833
United Kingdom	8,909,864	8,174,134
China and Japan	12,702,692	5,053,444
South Africa	3,926,620	10,675,008

MANITOBA.

Early in the year it became evident that a large quantity of lumber would be consumed in Manitoba and the Territories. Manufacturers put forth their best endeavors to supply the requirements of their customers, but the buying in anticipation of good crops was extensive, and there developed a shortage in the lumber supply. The demand was unprecedented, all classes of lumber being consumed in large quantity. Building operations in Winnipeg were of large volume, totalling in value nearly three million dollars, and calling for many million feet of lumber. There was scarcely a lull in trade until winter weather brought about a cessation of outdoor work. Manufacturers were always far behind with orders for lumber, as is evidenced by the statement of the manager of one company that they always had unfilled orders on their books for at least three hundred cars.

British Columbia lumber and shingles sold freely in Manitoba, but very little stock was imported from the United States. Prices were advanced at different intervals, and stand materially higher at the close of the year.

COOPERAGE STOCK.

The Sutherland-Innes Company, Chatham, Ont., furnish the following particulars of the cooperage stock market in 1902:

The year has been a most unfavorable one for getting out cooperage stock. While there were fairly good stocks of timber put in at the mills last winter, just as soon as these were cut out there was no chance of getting any more timber to the mills, consequently as soon as the winter supply of logs was cut out the mills had to close down. This curtailed the production very seriously, and the consequence is at the present time there has been an entire clean-up of cooperage stock in Canada. There has been hardly anything at the mills except No. 2 stock, of which the production last year was very much larger proportionately than is usual. The excess in the production of No. 2 staves was caused by the continual wet weather throughout the season, which mildewed and damaged staves that would otherwise have gone into the No. ones, consequently the percentage of No. ones from the staves cut was very small this season.

The demand for all classes of stock has been exceptionally good, there having been a splendid apple crop, and trade through the country being excellent.

The supply of raw material in Canada has been rapidly exhausted, and the prices of logs and bolts are almost double what they were five years ago.

On the whole the season was not a very satisfactory one for manufacturers of cooperage stock, as while the prices during the latter part of the season were very good, manufacturers had little or no stock to dispose of, it taking about all of the stock of the manufacturers to supply their contracts and their regular customers. In the early part of the season cooperage stock was sold at too low figures, and the prominent manufacturers do not anticipate that stock will ever go down so low again, in fact it would be impossible to sell stock as low again except at a loss, on account of the increase in the cost of raw material.

THE FORESTS OF RUSSIA.

The gradual deforestation of Russia is attracting increased attention throughout the Empire, and the Forestry Society as well as the Forestry Department of the Ministry of Agriculture and Domains are discussing means for regulating the consumption of timber and for propagation. There does not seem to be any great cause, however, for apprehension, as a recent official report states that forests in Russia now cover an area of 180,000,000 hectares (464,000,000 acres.) Among European countries Sweden comes next with 44,000,000 acres of forests. In Russia the forests cover 36 per cent. of the whole area of the country. The Swedish forests occupy 44 per cent. of the total area, and the Austro-Hungarian 32 per cent. of the territory of the dual monarchy. Reckoned by the population there are 4.9 acres of forest to each inhabitant of Russia, 9.5 acres in Sweden, 10.4 acres in Norway, and .69 acre per head in Germany. The forests have a greater importance for Russians than for people of Western European countries, as villages and country houses are largely built of wood, stone and brick houses being almost unknown, and the forests furnish the main sources of fuel supply.—Journal of the Society of Arts.

NATIONAL WHOLESALE LUMBER DEALERS' ASSOCIATION.

Arrangements have been completed for holding the annual meeting of the above association at the "New Willard" hotel, Washington, D.C., on March 4th and 5th. This meeting will be one of the most important that has ever been held. Many questions of interest to the lumber trade in general will be discussed and it is contemplated that important action will be taken on several matters.

It is reported that C. P. Easton & Company, of Albany, N.Y., have decided to build a saw mill on their timber limits recently purchased in the province of Quebec.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company
of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance... $ 1.00
One Copy. Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensa ble for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

LUMBER GRADING.

The remarkable activity in the lumber business of late has served to accentuate the necessity of uniform grading. It is well-known that when business is good and prices high the grades are usually lowered, this being the case in some degree even where lawful inspection is in vogue. Where every manufacturer makes his own grades, and they are not subjected to the scrutiny of an official inspector, the opportunity is most favorable for raising or lowering the grades according as the demand is strong or otherwise. In times such as the present, when lumber is difficult to find, the limit to which this elastic process may be carried is a very wide one. A person in need of lumber will hesitate to return a shipment even if it is deficient in quality unless he is reasonably sure that he can obtain his requirements from another source.

Buyers encountered undergrading quite frequently during the past year. The activity in the trade often made it advisable to purchase stock without first making an inspection, and as a result instances of disappointment were quite common. The consequent loss usually fell upon the dealer, as the consumer, requiring a certain grade of lumber for a specific purpose, would refuse to accept the grading or was given a discount in lieu thereof. Where the manufacturer deals directly with the consumer he is generally closely in touch with his requirements and regulates his grading accordingly.

It is singular that no concerted effort has yet been taken by the lumbermen of Canada to establish standard inspection rules which would remedy the existing unsatisfactory conditions and assist to give the business a prestige in keeping with its importance. Visiting lumbermen from other countries invariably express surprise that they are not able to obtain more definite information as to the grading of Canadian lumber. Perhaps the Ontario Lumbermen's Association, at its forthcoming meeting, will take the initiative.

COST OF PRODUCING WOOD-WORK.

The inventory taken at the close of 1902 by the producers of wood-work for house finish and general building purposes should have shown a very substantial margin of profit on the year's business, as the volume of building was large and factories were operated continuously. That such was the case, however, is to be doubted, inasmuch as prices of wood-work have not advanced in proportion to the increased cost of the raw material. When about four years ago the price of lumber commenced to advance, it was anticipated that there would be a corresponding rise in the price of sashes, doors and other finished goods. Contrary to expectations, there seemed to be a disposition on the part of manufacturers to adhere to the old lists, and it was with difficulty that even a slight advance was attained. Proposals in the same direction have ever since been received coolly and without unanimity, so that the business of manufacturing wood-work is to-day less profitable than it should be.

In Toronto, and doubtless similar conditions prevail elsewhere, dealers in lumber have found great difficulty in selling to the sash and door manufacturers at a profit, the obstacle being the low price at which the finished goods are being sold. It has seemed to be the object of the trade to endeavor to sell their products as low as possible, with little regard to the increased cost of production so long as there was a margin of profit on the year's business. While manufacturers in most other branches of industry have benefitted by the recent prosperity, and have strengthened their position so as to withstand the reverses of possible years of depression, the producers of wood-work have pursued a policy of management tending to ultimately bring disaster.

Within the last three years the selling price of finished wood-work has advanced perhaps fifteen per cent. This compares with an advance ranging from twenty-five to fifty per cent. in the cost of the raw material. Lumber which three years ago could be bought for fourteen dollars to-day brings twenty dollars; machinery and labor are much higher in cost; while the value of pine timber stumpage has increased nearly fifty per cent. In the face of these conditions it seems singular that the manufacturers of wood-work do not come together and agree upon a price basis by which they would share to a reasonable extent in the prevailing prosperity.

These remarks express the sentiment of many persons engaged in the lumber trade, and of some manufacturers of wood-work. It is to be hoped that this sentiment, which is gradually growing, will soon become sufficiently strong to remedy the unsatisfactory conditions.

FIRE INSURANCE RATES.

The dissatisfaction in lumber circles with fire insurance rates on saw mills and allied risks still exists. The present method of rating is very unpopular and is claimed to be unjust, in that it does not allow the policy holder due benefit from precautions taken to render his property free from danger of fire. The lumber mutual insurance companies of the United States give special attention to fixing a rare in proportion to the risk involved in each individual case, and on this ground seem to offer more reasonable terms. By such a system every policy holder makes the rate for himself in the precautions he adopts to protect his property. Another advantage in this method is the resultant smaller number of fires, as it is well known that in the event of fire the loss is not alone in the actual damage, but in the inconvenience and loss of articles, documents, etc., which sometimes cannot be replaced.

The manufacturers of British Columbia have taken a wise step in their purpose to investigate the causes of fires in dry kilns. It is intended to build a sample kiln and make exhaustive tests, the results of which will be awaited with interest. In connection with insurance rates it would appear that certain Canadian companies have found it cheaper to carry their own insurance. The Montreal Street Railway Company, for instance, have, after a thorough investigation, adopted this policy, and at the last annual meeting set aside the sum of $100,000 for the purpose. It may be that the lumber fraternity will find it advisable to adopt a similar course unless more equitable and reasonable rates are given by the insurance companies.

EDITORIAL NOTES.

The facts presented in last issue relating to the export of British Columbia shingles to the United States are a strong commendation of the manufacturing methods of Canadian millmen. There is unanimity in the statements as to the better quality of the Canadian red cedar shingle which would seem to substantiate the claim beyond all doubt. In the British Columbia mills upright machines are used exclusively. These operate comparatively slowly, and turn out a product second to none. In the United States it seems that quality has been sacrificed to quantity, with the result that the Canadian shingle commands from 25 to 50 cents per thousand more than the home product in that market.

Some time ago there was a great splurge of advertising by the Atlantic Pulp and Paper Company, a $3,000,000 corporation of Canada that had some stock to sell. The public did not show any enthusiasm in the matter, and now the newspapers that carried the "ads" are entering up judgments for the amounts of their bills, plus court costs, etc.—Paper Trade Journal.

Our contemporary has only told half the truth. The so-called "$3,000,000 corporation of Canada" was a United States concern, incorporated in the State of New Jersey by A. L. Meyer, B. P. Moore and F. G. Smith, all of New York city. The fate of the company would probably have been different if it had been backed by Canadian capitalists.

VIEWS AND INTERVIEWS

Mr. John Waldie, president of the Ontario Association of Lumbermen, when asked for his opinion with reference to the request for an export duty on pulp wood, said: "I am strongly in favor of allowing each province to build up its industries. Any enactment made at Ottawa dealing with the properties of a province would not likely be as permanent as if the province acted for itself. For instance, what in an international treaty suited the Maritime Provinces might not suit Ontario, and to get fish free into the American market would not suit Ontario, if procured at the sacrifice of the manufacturing conditions for wood products in the country. The export duty would be considered an offensive enactment by the United States, and would at once bring into operation the double duty clauses of the McKinley bill, which were specially inserted to prevent the export duty, while the provincial enactments to compel manufacturing are defensive measures to protect and develop our own industries. Between an offensive action and a defensive action, the latter is our better position."

* * *

A gentleman always on the alert for good sound ideas representing an advance in manufacturing methods had before him when I entered his office a copy of the December LUMBERMAN, with the article relative to Killam's new method for sawing lumber marked in colored pencil, presumably in order that it should receive a little consideration at his hands in a leisure moment. "The claims advanced in the article," he remarked, "are all right, but lumbermen are always desirous of seeing such machines in operation before giving them their approval. I think that Mr. Killam's circular mill would be likely to increase the quantity of waste and produce more thick and thin lumber than is the case with the ordinary single-cutting saw. I know that some trouble in this direction has been experienced by the double-cutting band, and while it may be possible to turn out the lumber equally as good as by the single saw, this I beleive can only be done by giving extra care and attention to the saws and having men to operate them who are expert sawyers of the first order." There is no doubt but that the tendency towards increased output may show itself in a poorer quality of lumber. This, however, is a question which has not yet been definitely settled so far as the double-cutting bands and circulars are concerned, and it is unfair to condemn them before they are put to the test.

* * *

D. H. and J. N. Talford at one time operated a retail lumber yard at Danvers, Minnesota, but a few years ago moved to Winnipeg and purchased a small mill located on Lake Winnipeg. They have been sawing a quality of timber not altogether to their liking, so have been on the lookout for a new limit. This they recently secured on the Saskatchewan river, chiefly spruce of a good grade. The timber will be floated down the Saskatchewan river to Prince Albert, where they have purchased and are remodelling a saw mill. Mr. D. H. Talford was in Minneapolis last month and expressed himself as in every way satisfied with his venture into Canadian territory. Speaking of the Northwest, he said that a few years ago when he first contemplated going up there his friends were inclined to consider him an object for sympathy on account of having to undergo the frigid temperature of the sub-Arctic region. Even now, when the wonderful tide of immigration has made that territory well known, few realize its almost boundless extent. While cruising through the timber in the summer Mr. Talford became acquainted with a missionary from the far north. He told him of a little settlement up in that section where they had been able to raise over forty bushels of wheat to the acre. This was over a thousand miles above the international boundary line. A great many who have made partial explorations of this great unknown region predict that there will be discoveries in the way of minerals that will astonish the world.

* * *

Mr. S. Gagne, whose father is a large pulp wood contractor in the Lake St. John district of Quebec, recently gave me some particulars regarding the pulp development in that territory. The Chicoutimi Pulp Company, he says, are greatly extending their works at Chicoutimi, and when completed expect to have an establishment second to none. There are four other pulp concerns in the Lake St. John district. The Jonquieres Pulp Company have a mill about ten miles above Chicoutimi, on the Riviere aux Sables, built about two years ago. It is now largely controlled by Messrs. Price Bros., of Quebec, who are said to have decided to build a large paper mill in connection therewith. The mill of the Metabetchouan Pulp Company is located on the river of that name and on a branch of the Quebec and Lake St. John Railway. Then there is the mill of the Ouiatchouan Pulp Company at Ouiatchouan Falls, which was described in the December LUMBERMAN. The fifth mill is located on the Peribonka river, north-east of Lake St. John. It was built about a year ago and turned out pulp during the past summer. Mr. Gagne is of the opinion that sometimes too little importance is attached to the necessity of securing competent engineering advice before building a pulp mill. He cited instances where as a result of this neglect suitable turbines had not been installed and where a railway had been built with a curve of 27 degrees, whereas it should not have had more than about 10 degrees. In another case proper surveys of the river were not made and it was afterwards found that the river was navigable only when the water was high, with the result that difficulty was experienced in getting the pulp to market. These mistakes have been expensive but will probably serve as object lessons for later and more extensive developments. If engineering advice of high order is ever necessary, it is in developing a water power and building a pulp mill. Mr. Gagne is very enthusiastic as to the future of the lake St. John district, the water powers of which, according to Mr. Langelier, are capable of developing 11,000,000 horse power.

MICHIGAN'S LUMBER INDUSTRY.

BY OUR TRAVELLING REPRESENTATIVE.
(Continued from last issue).

At one of the lumber mills I asked where the town of Muskegon got its name. One man volunteered the information that it was taken from the Indian word 'Muskeg,' meaning a swamp, as the lower part of the city was formerly a swamp. But another lumberman said "No, it was called Muskegon because of a party of Indians and white traders who in going up the river accidently lost a musket and one of the Indians or traders said "Musket-gone." You can take your choice of the two—I can't attempt to decide.

From Muskegon I passed through Sparta (famed for peaches), on to Greenville (famed for potatoes). At the latter place they say they have the largest export of potatoes of any county in the United States. At the hotel a farmer told me they had taken 29 bushels of apples from one of his trees—other prominent men vouched for this. But what will make Greenville famous is the Gordon Hollow Blast Grate Company. This concern is not only of interest to all lumber mill owners, but of interest to all consumers of fuel. They have a great thing and ought to do a big Canadian business. Greenville has at least one real live lumber industry, and that is the John J. Foster Lumber Company, who are well-known as an old established firm.

At Detroit I saw Mr. Ed. Hall, of the Detroit Mill, Brownlee & Company, Detroit Lumber Company, Fred. W. May, Galloway-Pease Company, H. Wineman, Jr., Moyer & Montgomery, McArthur Bros. Company, Ltd., Fred. G. Ross, and a few other lumbermen. Most of these handle considerable quantities of Canadian pine. Some of the old companies have gone under, as in the Saginaw Valley (where I found three old lumber companies who are now engaged in the beet-root sugar industry). The Detroit Lumber & Timber Company have sold their Arkansas limits. Detroit is a good point for Canada lumber, and ought to be a good distributing point, but it cannot come up to Toledo or Cleveland in that respect. It may later on.

One of the well-known millionaire lumbermen of Michigan was the late Charles T. Hills, who died at Muskegon three weeks ago. He started into the lumber business in 1841, by riving shingles near Grand Rapids. At this time shingles were all made by hand. In 1852, with his brother Charles, he went to Muskegon, built a shanty and commenced business as a shingle weaver. Then for 12 years he was a clerk for the lumber firm of Ryerson & Norris. In 1865 he became a partner in the firm of Ryerson, Hill & Company. In 1887 he was sole manager. While in Muskegon I had abundant testimony to the personal worth and integrity of this grand old man. He donated a temple costing $50,000 to Muskegon.

Although "the woods" in Michigan is now confined to a very small area, there has been a scarcity of labor both in the upper Peninsula and Wisconsin. The real "lumberjacks" are not as numerous as they were a few years ago. It is not that the wages are not high enough, but the hardy Canadians who were the best woodsmen have gone further west or drifted into "something better." These men have turned their attention to other kinds of labor. Their place is being taken by an entirely different type of man. Foreigners, principally Swedes and Finlanders, who have not been in the country long, have been hired by lumber operators. But they are not like the "lumberjack" of old days, the men who were seldom known to wear mittens or coat even on the coldest days, and whose constitutions were like iron.

"The Woodman's Hand-book" is the title of a very useful work issued by the Bureau of Forestry of the United States Department of Agriculture. It is from the pen of Henry Solon Graves, Director of the Yale Forestry School and brings together information of much value to the lumberman and forester alike. It contains different rules for computing the contents of logs, information concerning the volume of standing trees, the rate of their growth, and the future yield of forests, as well as methods of estimating standing timber.

THE MANUFACTURE OF RESAWS.

The accompanying illustrations will bear out the statement that Messrs. W. B. Mershon & Company, of Saginaw, Michigan, possess a plant for the manufacture of saw-mill machinery which is not excelled on the American continent. The first illustration is an exterior view of the front of their office, the other two being interior view of their new machine shop. The building is over 250 feet in length and ranges from 59 feet to 70 feet in width. There are many special tools located with particular reference to the work in hand.

EXTERIOR VIEW OF OFFICE OF W. B. MERSHON & COMPANY.

The machinery is mostly electrically-driven, Westinghouse and General Eletcric induction motors transmitting power from the central power plant of Mershon, Schuette, Parker & Company located in an adjoining building. The machines are even tested and loaded electrically, and the shops are lighted by electricity and heated by steam and hot water.

This firm are comparatively young in the business. About 1890 Messrs. W. B. Mershon & Company having obtained a large contract for oil boxes to be exported, required different methods than the ordinary for resawing ¼ inch stock. The order specified that the material must be planed after resawing, and it was necessary to resaw the material so accurately that it would be impossible to detect any inequalities in thickness. They purchased the best resaw to be had at that time, fitting the saw blades by hand, as there was no filing machinery for band resaws to be obtained. This proved the success and practicability of the band resaw. Having done so, they commenced to manufacture resaws for their own use. Competitors in the box business made application to be supplied with similar machines, and thus a demand for the Mershon band resaw was created, which has developed from year to year.

The first machine was sold to the Bohn Manufacturing Company, of St. Paul, Minn. In the first year they sold probably half a dozen machines; a score or more the second year; sixty the third year; and during 1902 they built and sold one hundred and fifty band resaws, pony band mills and other band sawing machines. Their catalogue, "Use and Care of Band Resaws," shows the line of machinery which they manufacture.

PERSONAL.

Mr. T. R. Deacon, chief forest ranger, has resigned his position in connection with the crown timber office, Winnipeg, and is about to assume the management of the Manitoba Iron Works.

The death took place last month of Mr. H. P. Lawrence, of the firm of Jacob Lawrence & Sons, lumber and stave manufacturers, Sarnia, Ont.

A quiet wedding was celebrated in Chicago last month, the participants being Mr. James Thomson, of the wholesale lumber firm of McAllister & Thomson, Hamilton, and Miss Louise Le Duc.

Mr. Robert Hamilton, jr., late of Parry Sound, who has been engaged for some months with the Dominion Lumber Company at Ingram River, N.S., sailed on the steamer "Pretorian" from Halifax on December 22nd en route to England to visit relatives.

Yeilding to the wishes of his friends, Aldermen Joseph Oliver, president of the Oliver Lumber Company, Toronto, decided to seek re-election at the recent municipal contest. He was again successful, polling the large vote of 1,883 and standing second on the list.

Mr. Thodore Ludgate, thew ell-known lumberman who has been endeavoring to secure premission to erect a sawmill on Deadman's Island, near Vancouver, B. C., recently became a victim of typhoid fever while in the east and was cared for in the Toronto General Hospital.

Mr. J.M. Agnew, Secretary of the Hanbury Manufacturing Company, of Brandon, Man., was a recent visitor at the office of the CANADA LUMBERMAN. He is in the east for the purpose of purchasing machinery for the new sash and door factory which the company have recently erected and will shortly put in operation.

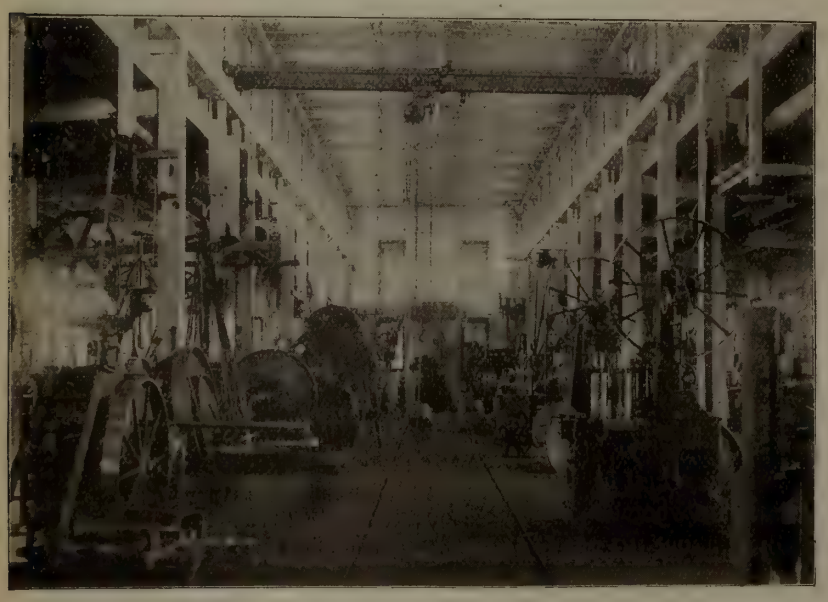
A party of Canadian lumber dealers recently sailed on the "Oceanic" for England. It consisted of Messrs. W. H. McAuliffe, of Ottawa, R. L. Blackburn, of the Hawkesbury Lumber Company, and Thomas Mackarell, Ottawa manager for Watson & Todd, of Liverpool, England. Messrs. McAuliffe and Blackburn have arranged a trip to Egypt and will devote some weeks to a winter yachting trip on the Mediterranean.

On January 5th Hon. J. K. Ward, M.L.C., of Westmount, Que., who has been identified with the lumber business for half a century and is well known to many readers of THE LUMBERMAN, celebrated the fiftieth anniversary of his arrival in Canada. Mr. Ward is in his eighty-fourth year and still finds it possible to attend to his regular work. His numerous friends trust that for many years to come his health may permit of his taking an active part in business.

A surprise was in store for Mr. Robert Kennedy, president of the Kennedy & Davis Milling Company, of Lindsay, on December 20th, when his employees gathered together to express to him in a practical way their appreciation of the uniform fairness which characterizes his dealings with them. He was presented with a costly gold-headed cane, suitably inscribed, accompanied by a complimentary address. The presentation was made by the foreman, Mr. George Burton, who was equally surprised when he was asked to accept a beautiful chair as an expression of the esteem and respect entertained for him by the employees. Both the recipients replied in a suitable manner.

Reports from Puget Sound show that the supply of red cedar suitable for shingles is becoming smaller every year and that maunfacturers will soon have to go to Alaska for cedar logs. New appliances have so greatly increased the output of the mills that five billions of shingles were cut last year in Washington and Oregon.

A cooperage exchange says: "Minneapolis millers recently received sample barrels from a Pittsburg cooper, the feature of which consisted of galvanized steel heads. Tests of these barrels did not prove satisfactory. On being filled with flour and rolled about, it was found that the flour sifted badly from between the staves and the head. The cost was also greatly against these heads. The unmanufactured steel would cost 4 cents per pound, and it would take about 6 pounds for the two heads. Hence the device has no longer been thought seriously of. Had this head been found practicable, it might have revolutionized coopering as it relates to the working cooper, as only ordinary labor would have been required to put such barrels together."



INTERIOR VIEWS OF MACHINE SHOPS OF W. B. MERHSON & COMPANY.

TREATMENT OF SECOND-GROWTH WHITE PINE.*

BY WALLACE I. HUTCHINSON, Wolfville, N.S.

(Continued from January issue.)

There can be no set rule as to what space of time shall elapse between thinnings. The quicker the growth, the shorter the interval between cuttings during the early life of the tree, the time being gradually lengthened as the trees advance in age. Common sense will have to govern largely on this point. The expense of thinning can be almost eliminated by the sale of the trees to be used in box-board manufacture, in southern New Hampshire white pine for box boards being worth from $6 to $10 per thousand. Under no conditions should brush wood be left in the forest, as it greatly increases the danger from fire. If the work of thinning is carefully carried out, a stand of white pine should be ready for the market in thirty or forty years, while by that time the ground will be in good condition for a seed-bed.

Cutting for reproduction should be carried on with considerable care and forethought. A few select trees, varying in number from ten to thirty per acre, may be left on the cut-over area to seed the ground, or a small lot may be cut clear and the ground allowed to seed itself from the surrounding trees. In the latter case the seed trees should be left on the windward side, so that the seeds can readily blow into the open (Fig. 4), the cuttings to be made, if possible, when there are indications of a good seed year.

FIG. 4.—NATURAL REPRODUCTION OF WHITE PINE. SEED TREES (IN THE BACKGROUND) ON THE WINDWARD SIDE.

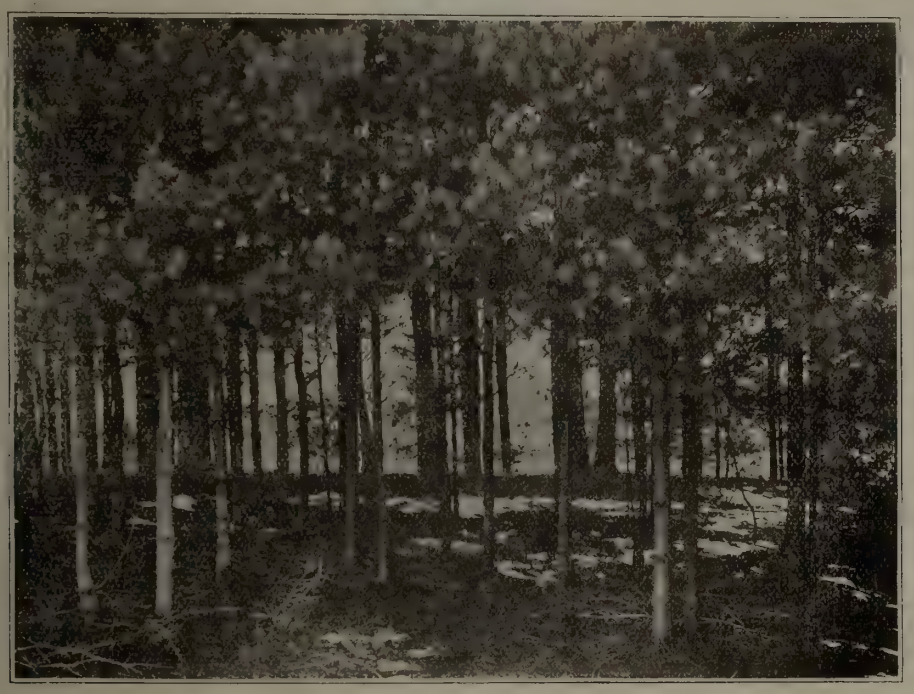


FIG. 3.—SHOWS EFFECT OF THINNING AND PRUNING.

While the white-pine seedings are still small, Grey Birch (Betula populifolia) is almost sure to come in, and, as it grows much more rapidly than the pine, soon overtops the latter trees (Fig. 5). The birch should be allowed to remain only as long as it is of material aid to the seedling as a nurse. After the pines are old enough to take care of themselves the birch should be removed.

Even aged stands in a natural forest are rare, as the whole of a denuded area is seldom seeded at once. In a natural forest, therefore, cutting should begin by taking out the mature trees first, thus allowing those that remain to quicken their growth through the increased amount of light and space. In summing up it may be that when the object is to produce quantity, thinning should be early, heavy, and often during the first half of the life of the woods, and more moderate and at longer intervals during the second half.

(To be Continued.)

FIG. 5. — SHOWING GREY BIRCH AND YOUNG WHITE PINES.

THE CULLER'S TEN COMMANDMENTS TO THE SHANTYMAN.

1. Thou shalt have no other thought but to make logs.

2. Thou shalt not make any crooked logs, or any which are rotten from the heart out, or any which have a gum crack, also shalt thou butt every log which is unsound on the stump.

3. Thou shalt not take the culler's good name in vain, for the culler will drop onto thee heavier than a house if ever he should scale logs for thee.

4. Six days shalt thou labor and do all thy logs but on the seventh thou shalt wash and mend thy clothes.

5. Honor thy foreman and manager that thy days may be long in the employ of the Company.

6. Thou shalt not kill time.

7. Thou shalt not put the crooked logs in the bottom of the rollway.

8. Thou shalt not steal the Company's goods by trying to get them from the van below cost.

9. Thou shalt not bear false witness against the Company, by saying that they make a profit out of the van, when thou knowest it is but for thy convenience and comfort it is kept.

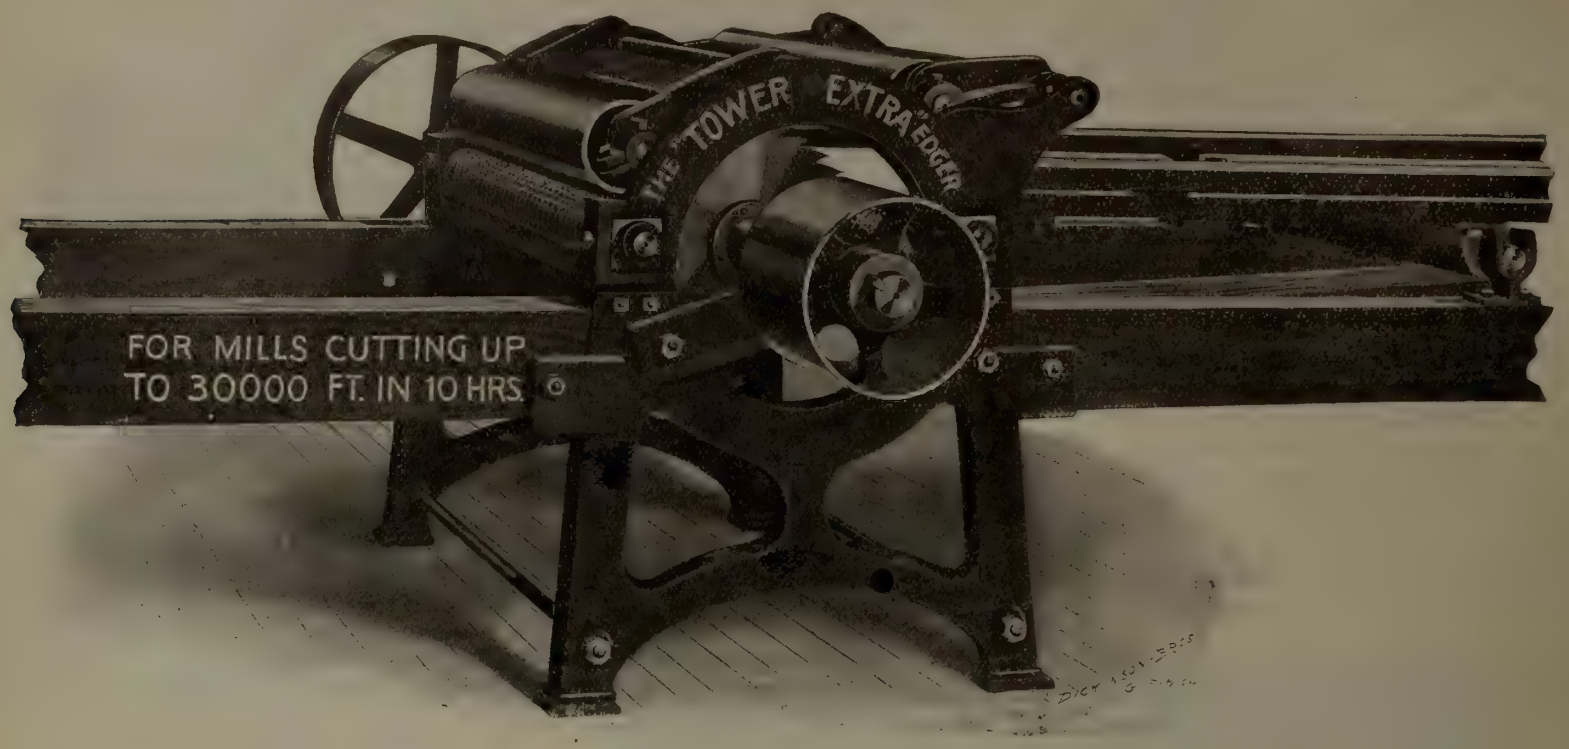
10. Thou shalt not covet thy neighbor's socks. Thou shalt not covet thy neighbor's mitts, nor his pipe, nor his tobacco nor anything that is thy neighbor's.

J. E. McI.

Pierpont Morgan is undoubtedly the most fascinating figure before the world to-day. "Mr. Morgan, His Advisers and His Organization" are discussed at length in the COSMOPOLITAN by John Brisben Walker, who spent ten days between Mr. Morgan's and Mr. John Mitchell's offices, in September, in an attempt to settle the coal-strike.

SAW MILL EDGERS.

There is probably no saw mill edger made to-day that is so widely known as the "Tower" and "Tower Extra" edgers, manufactured by the Gordon Hollow Blast Grate Company, of Greenville, Michigan, and none that they require little power; the shifting machanism is up-to-date, convenient and positive; the feed rolls are adjustable in four directions, this being an original feature; the saws may be removed easily and quickly, without disturbing the arbor ; the saw arbor is provided with a steel feather key throughout its entire length, which does away with individual keys for the different collars; the vital parts are carried by a substantial iron husk resting solidly on the floor; there is no other edger made approaching them in cheapness.



These edgers are made in two sizes, as follows : The "Tower" 2 and 3-saw edgers, improved—claimed to be the only edgers made for mills cutting not be exceed 20,000 feet in ten hours. The "Tower Extra" 3-saw edger, for mills cutting up to 30,000 feet in ten hours. The "Tower Extra" is a duplicate of the "Tower Improved, except that it is larger and considerably heavier

That these edgers are entirely satisfactory is evidenced by the fact that there are at the present time over 800 of them in use. We have no doubt the manufacturers, the Gordon Hollow Blast Grate Company, of Greenville, Michigan, would be glad to promptly respond to a request for a copy of their new Catalogue D.

is more favorably regarded The reason is not far to seek. They are thoroughly practical edgers for small and medium sized mills at low prices, and edgers of this description are very scarce.

Among the special features of these edgers the manufacturers claim the following : They take up little room;

ADJUSTABLE LOG SIDING MACHINE.

A machine which would slab opposite sides of a log at one operation, and do it perfectly and rapidly, has long been wanted. For certain uses the "rosser" has been applied with success, but it has in many cases a decided disadvantage in that it is a machine which planes off opposite sides of the log, reducing what might be slabs, with some value for the manufacture of shingles or lath, into chips. The Rodgers Iron Mfg. Company, of Muskegon, Mich., have a log siding machine with which the saws can be adjusted so that no time will be lost in passing from one size of logs to another.

The object of this machine is, of course, to take care of a small class of timber or bolts which cannot be profitably manufactured with a band saw or circular mill, also for the manufacture of ties and preparation of material for the gang or edger. Close upon two thousand logs have been sided with this machine in a day of ten hours. Machines of this kind will be in great demand as the logs from year to year become much smaller. Mr. A. Rodgers, the president of this enterprising company, as well as the energetic secretary and manager, Mr. W. F. Chrystal, deserve great credit for the introduction of this machine into the Canadian lumber field.

That man who never dares risk a penny in advertising his goods, can generally be heard above the entire anvil chorus, insisting "Advertising doesn't pay."—Business Problems.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 28 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. IX. TORONTO, CANADA, FEBRUARY 4, 1903 No. 51

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING MONTREAL
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in he current week's issue.

WANTED—1 INCH, 1¼ INCH AND 1½ INCH Soft Cork Pine 1sts and 2nds, also deal ends. Apply BOX 20, CANADA LUMBERMAN.

WANTED—A MAN CAPABLE OF RUNNING a house finishing factory, also a man capable of taking charge of finished lumber yard who can classify and swing lumber. Both men must be strictly temperate and first class in their line. Apply to W. CURRIE COMPANY, Campbellton, N. B.

WANTED

Young, hustling, vigorous English and French speaking Woods Superintendent. Must thoroughly understand economic timber and pulpwood logging and capable of handling workmen to advantage. High-class wages to high-class man. Don't apply if not entirely qualified. Address Box 114, CANADA LUMBERMAN.

Second-Hand Machinery For Sale

IN LOTS TO SUIT PURCHASER.

1 LANSING WATER WHEEL, 60 INCH, and the following: Leffel wheels: One 56 inch; three 48 inch, one 40 inch, two 35 inch, two 30 inch, one 20 inch—all complete with crown wheels. Also one each of the following: Engine, 18x24 cylinder, slide valve, 6 inch shaft, 9 ft. fly wheel, with two iron 8 ft. pulleys; pair Upright Engines 14 x 20, slide valve; Circular Saw Frame, carriage with receding knees, Boss dogs, double friction rope feed, 120 feet track; Circular Saw Frame and Carriage to cut 30 ft.; one Perkins' Shingle Machine; two Saw Jointers; Sapping Saw, Drag Saw, and a quantity of Pulleys and Shafting, assorted sizes; two Slab Saws; two Double Edgers; two Saws with attachments; one large Force Pump. THE DICKSON CO., Peterborough, Ont.

FOR SALE—A CIRCULAR RE-SAW AS good as new. J. KAUFMAN, Berlin, Ont.

FOR SALE.—A QUANTITY OF 2" HEMLOCK Plank P. O. Box 213, Almonte.

WANTED—IMMEDIATELY, A FEW CARS of Dry 6/4 Beech or Maple. Please write to the KNECHTEL FURNITURE CO., of Hanover, Ont.

WANTED—ELM AND ASH LUMBER 1¾" and 2", 8, 10 or 12 ft.; also Red Oak. Apply to LACHUTE SHUTTLE CO., Lachute Mills, Quebec.

WANTED—2x4 AND 2x6 HEMLOCK thoroughly seasoned, inch Birch, Black Ash and Chestnut. R.E. KINSMAN, 17 King St. West, Hamilton.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

WANTED—WHITE WINTER CUT MAPLE, must be straight in grain, 1¼ inch, 1½ inch and 2 inch. Are open to place orders now. Apply Box 40, CANADA LUMBERMAN.

WANTED.

4/4 LOG RUN BASSWOOD, DRY; WILL PAY Spot Cash. COLONIAL LUMBER CO., Cleveland Ohio.

FOR SALE

VENEERS—SINGLE PLY OR GLUED UP stock. INTERNATIONAL LUMBER CO., LIMITED, Sault Ste. Marie, Ontario, Canada.

FOR SALE

SPRUCE SPILES, ANY LENGTH. HAVE also a large quantity of butternut, can cut to order. Apply FARLEY BROS., Hull, Que.

WANTED.

A GOOD SECOND-HAND STEAM BOILER of from 40 to 55 horse power, Stationary, with or without the necessary attachments. Give necessary particulars. Address C. S. DIT BLONDIU, Chelmsford, Ont.

FOR SALE.

WELL EQUIPPED SAW AND SHINGLE Mill, with all the limits and dams on river. Also about 15,000 spruce and cedar logs, cut this winter. For information address Box 29, CANADA LUMBERMAN, Toronto, Ont.

LOOK HERE!!!

Do you want any small Bill Timber, Joisting or other Lumber? We can saw it for you on short notice. PINE LUMBER COMPANY, CARTIER, ONT,

FOR SALE

Two Stationary Saw Mills complete, capacity 10 to 15 M. per day, 40 h.p. Both are bargains at the price, $800 each f.o.b. either G.T. or C.P.R. Also one direct action Portable Mill complete, capacity 8 M. per day, now running in good location. Price $600. Terms cash and immediate possession given if mill remains where it is till spring. Address J. R. DUFFUS, Box 156, Thamesville, Ont.

FOR SALE

Milling business in good agricultural centre Western Ontario, including Planing Mill and Sash Factory, with good lumber business in connection. Saw mill capacity 10,000 per day. Good feed grinding outfit with good patronage, 20 h.p high speed engine and 80 h.p. boiler all in good repair. A thoroughly going concern and a money maker. May may not include flax-mill with necessary machinery and electric lighting plant. Must be sold to close an estate Apply Box 55, CANADA LUMBERMAN.

WANTED — BASSWOOD, COMMON AND Better, must be full inch, winter cut. Are open to contract for the season's supply. Apply Box 30, CANADA LUMBERMAN.

BASSWOOD AND ELM LUMBER WANTED, must be dry. We are open to buy considerable quantity of 1 inch and 3 inch, of both Elm and Basswood. THOMAS BROTHERS, LIMITED, St. Thomas, Ont.

WILL REQUIRE ON THE OPENING OF Navigation Hemlock, Spruce and Pine Lumber, 1", 2" and 3", by the cargo. Address VIGARS & Co., Port Arthur, Ont.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

WANTED.

ONE AND A HALF MILLION OF MILL RUN, White Pine; also one million feet of Hemlock, cut to order. THE BLONDE LUMBER & MANUFACTURING CO., LTD., Chatham, Ont.

FOR SALE.

TWO MILLION FEET OF 1902 CUT Spruce, Birch, Hemlock, Maple and Basswood. 1000 M 16" Cedar Shingles XXX, C, B., and XX. Apply 175 Cooper St., Ottawa, Canada.

WANTED—A MILL RUN OF FROM THREE to five millions of white pine to be cut to order. We are open to buy any kind of white pine lumber. Will contract for ten million white pine lath. Please write us. CANADA LUMBER MFG. CO., North Tonawanda, N.Y.

WANTED TO BUY.

BIRCH, MAPLE AND BASSWOOD LOGS or lumber for cash, delivered to Cincinnati. Address, R. E. BECKER CO., Cincinnati, Ohio. Correspondence solicited.

WANTED

Birch Ends in multiples of 16" lengths, size 7" x3" or 4". Lowest price for 200,000, to HEAL & SONS, LTD., Orkney St., Battersea, London, England.

WANTED:—TO MAKE A CONTRACT FOR next season's cut, whole output of a mill's cut, about 1,000,000 to 1,500,000 ft. White Pine; would also take Hemlock, Birch, Cedar and Spruce; about 2,000,000 ft. in all. Also Black Ash wanted in carload lots, cut to order. Freight rate not to exceed 13½c. to Berlin, Ont. J. KAUFMAN, Berlin, Ont.

WANTED—WE ARE ALWAYS OPEN TO contract for all kinds of hardwood lumber. Please state price F. O. B. your nearest station, quantity and quality of the different kinds you will have to sell during 1903. We also require a large amount of Dimension stuff, particulars of which will be furnished, on application, by the KNECHTEL FURNITURE CO., of Hanover, Ont.

IMPORTANT SALE

A FARM, 9 x 40 ARPENTS, WITH AGRIcultural implements complete; flour mill, modern door and sash factory, saw mill complete, shingle mill, planers; all these mills are operated by water power, and are situated on the river bank; booms; 16 miles of timber limits, of which 10 miles are well wooded with cedar and spruce; dams; camp with sleighs; horses, vehicles, saws, chains, cooking utensils, also private residence. For particulars apply to JOSEPH ROY, Riviere Blanche, Matane Co. Que.

McEachren & Connor, lumber dealers, Alvinston, Ont., have dissolved partnership. The business will be continued by Mr. McEachun.

CURRENT TRADE CONDITIONS.

ONTARIO.

The situation in respect to white pine is becoming an interesting one. This week we chronicle an advance in the Ottawa quotations for several of the common grades, with more liberal buying than has been reported for some time. The hesitation of buyers which was in evidence in early January has given place to a strong desire to contract for stock at late quotations, but in some instances manufacturers are putting out new lists showing a substantial advance. The recent mild weather is responsible in part for the higher values. In certain logging districts the snow has almost entirely disappeared and efforts to get logs out of the woods have been abandoned, temporarily at least. Should these conditions continue for any length of time the result will be serious to lumbermen, most of whom have many logs yet to haul to the streams. Much higher prices for the season's cut of lumber may be expected in case there should be a shortage in the log input.

Many buyers are in the market for mill cuts. Some have conceded the demands of the manufacturers and closed contracts at $20 for log run. Others are still negotiating in the hope of making a better bargain. The price of log run, however, has become quite firmly established at $20 for logs averaging ten to the thousand feet and $22 for an average of eight to the thousand. The latter figure is by no means the maximum, as we are advised of the sale of an entire season's cut of log run at $30 f.o.b. rail of vessel Georgian Bay point. The particulars have not been learned, but it is safe to assume that the logs are exceptionally large and of excellent quality.

Hardwood lumber continues in good demand. There is very little bartering over price, the buyer usually being willing to accept the manufacturer's quotation whenever he finds suitable stock. The tendency of prices is upwards.

QUEBEC AND NEW BRUNSWICK.

There is practically no change in spruce lumber, which continues firm, with some manufacturers holding out for an advance in price. The cedar shingle market is still somewhat depressed. Some sales of extras have been made for Boston delivery as low as $3.35, with other grades in proportion. The current price, however, might be given as $3.40, at which figure the large manufacturers are endeavoring to hold the market. Opinions differ as to the future course of prices. Some dealers contend that the bottom has been reached for the present, while others hold tha

prices will go lower for the next month or two. The latter argue that the local yards throughout New England bought heavily in the fall on the belief that prices were going to be higher, and that they have now a large stock of shingles on hand. Further, the mills will probably make large cuts during the spring and summer. These conditions may bring about lower prices, bnt if they do they will be only temporary, as the demand will pick up shortly. Prices of New Brunswick shinges have doubtless been influenced by the recent break in Washington red cedars.

MANITOBA AND BRITISH COLUMBIA.

While the movement of lumber throughout the West is not heavy, dealers are figuring on large orders for the coming season, and the prospects are considered to be very bright for an active trade. Conditions generally are satisfactory, the only drawback being the policy of cutting prices which has been resorted to by representatives of Minnesota manufacturers. The new price list on white pine will shortly be put into effect.

If prospective building operations may be taken as the criterion of the lumber trade, the mills will be taxed to their utmost to supply the demand. Many new buildings are projected in Winnipeg, and in the country districts there promises to be considerable activity. It is announced that the North-West Elevator Company will build forty-one grain elevators throughout Manitoba and the Territories, at an approximate cost of $1,700,000. These alone will call for a large quantity of lumber. In British Columbia lumber and shingles are in good demand. A large quantity of lumber is being consumed in the construction of new canneries. Prices are steady.

UNITED STATES.

The only important news affecting white pine comes from Minneapolis, where there is a strong disposition to advance the price of dimension The situation in respect to that grade is especially strong, particularly in view of the advance made by the southern manufacturers, and at the Association meeting to be held on Febuary 17th, an effort will be made to advance the price at least 50 cents per thousand. All grades of white pine are firm and there is no doubt that the available dry stock will be required before the new cut is ready for the market. Buffalo and Tonawanda dealers are purchasing quite heavily in the vicinity of Duluth, prices being about as recently quoted. In the Buffalo market there is an increased shortage of cuts and better. The supply of 12 inch box is practically exhausted, having been used largely in place of No. 3 barn, which is selling at $23. There is every prospect of an active spring demand for white pine, with probably higher prices as the supply of dry stock becomes depleted.

Another week has brought increased strength to hardwoods of all kinds. At the annual meeting of the National Hardwood Manufacturers' Association, held in Cleveland last week, the prices of oak, ash, elm, poplar and other hardwoods were advanced quite sharply, but it seemed to be the opinion of those present that the advances were fully warranted by the conditions. With dry lumber it is not a question of price so much as where the stock can be found. Birch is a good seller and in light supply, while basswood has been out of the market for some time.

GREAT BRITAIN.

The timber market of Great Britain has been strengthened by the recent attitude of Scotch buyers, who are showing a desire to purchase quite heavily at current quotations. As a result prices of whitewood have been advanced at least five shillings per standard. In the London market there continues to be a deadlock between shippers and importers, and up to the present time a very small percentage of the North of Europe production has been placed. Representatives of Canadian shippers have been more successful, although some importers refuse to pay £10 for second quality spruce c.i.f., and £9 5s for third quality 3x9, which prices are being asked. They are endeavoring to force shippers to reduce these figures by at least five shillings per standard. There is, however, a just appreciation of the strong statistical position of Canadian pine and spruce, as in the last issue of the Timber Trades Journal we find the folliowng : "The position in Canadian woods and the sales made, perhaps, may throw some light on the position as regards other ports. Red pine, has been sold at £12 10s. c.i.f., and the advance in white pine is even greater. First quality ends and 7 to 10 in. have been sold at £22 f.o.b.; and the same percentage of advance applies to all other qualities and sizes with, possibly, the exception of second quality, of which sales have been made c.i.f. at £19 10s. for 11 inch, 12 to 16 ft., and £14 10s. for 7 to 10 in., 10 to 16 feet. Third regulars have been sold at £13 c.i.f. As the stock in Great Britain of red and white pine is probably at least 5,000 Petersburg standards short of what it was this time last year, and the stock in Canada is reported to be even lighter than the small stock wintering last season, the position would appear to be very strong." Birch Timber is strong, the average price at a recent auction sale being 20d for 14½ inch.

STOCKS AND PRICES.

In the Saginaw Valley maple logs are selling readily at $7 to $8.50 at shipping points.

A steamer cleared from St. John, N. B., last week for Barcelona, Spain, with, 1,650,000 feet of deals.

The sale is reported at Milwaukee, Wis., of 5,000,000 feet of log run basswood, to be cut this year, at $19 per thousand.

The Victoria Terminal Railway and Ferry Co., of Victoria, B.C., is in the market for 500,000 ties, 7 x 8 inches and 8 feet long.

The Department of Railways and Canals at Ottawa is asking for tenders up to February 10th for the supply of 1,500 cedar poles for the Welland canal.

It is estimated that the cut of logs on the Miramichi river, in New Brunswick, this winter will be about 117,000,000 feet, which is slightly less than last year.

According to the estimate of E. F. Stephenson, the Rat Portage Lumber Company sold 60,000,000 feet of lumber in Manitoba and the Territories last year, and the Keewatin Lumber Company 20,000,000 feet.

Under date of January 7th, Messrs. S. P. Musson, Son & Company say of the Barbadoes market: "There have been no arrivals since our last. The market is only lightly stocked with both white pine and spruce, and receipts of either will command full rates. We understand that our neighbors have tried to place another cargo of spruce on C. & F. basis, but we do not think they have done so up to the present time. There have been no receipts of shingles, but all that were imported for the Imperial Government contracts have been sold to one of the dealers." Current prices are as follows: White pine, $25.75 per M for first quality and $21.25 for second quality; spruce, $22.50 for first and $19.50 for second quality; Long Gaspe cedar shingles, $4.89 to $5.04; cedarlaying, $1.82; spruce, $1.65 to $1.70.

BIRCH SQUARES AND SEATS

A large buyer of Birch chair seats and of Birch squares is open to contract with a mill for their output. Also open for Broom Handles and Dowels in large quantities. Write in first instance to "Finance," care of CANADA LUMBERMAN.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.

The even tenor of the Ottawa lumber market has been broken, and the advance which was predicted in these columns before the New Year has made its appearance. This advance is unlike others of the past year, as it is confined to the plebian culls and other lower grade lines. Moreover, the advance is not confirmed to standing stock, it applies as well to next summer's cut, over which there is brisk bargaining, at least that part of it that has not already found a customer before it has left the tree. There's a lesson in this latest advance, and it would be well for all interested to take note. It furnishes proof, if further be necessary, that no break may be looked for in the lumber market before next autumn at the earliest. Jobbers are searching in all directions for future cut, and long before the saws commence their song the big end of the cut will be off the market.

A glance over to-day's quotations in THE LUMBERMAN tells the tale in figures more forcibly than words could do it. Pine good shorts, 1¼ in. and 1½ inch, have advanced to $28 to $30, the old figures being $24 to $28. Same stock 2 inch has advanced to $30 and $35 from $27 and $32. No. 1 dressing sidings pine, former quotations on which ran from $20 to $24 per M, are now placed at $24 to $28. No. 1 dressing strips pine are selling from $18 to $24, former figures being $16 to $20. No. 1 dressing shorts pine have advanced from $14 to $16 to $16 to $20. Shingles also show an advance, clear butt 18 inch pine selling from $2.25 to $2.40 and XXXX pine from $3.00 to $3.25 per M.

Railway officials and jobbers report an easier and better movement of lumber from Ottawa and Ottawa district points. Two causes are combined in this increased activity. In the first place the lethargy of the holiday season has given away to the activity of the first month of a promising year. Equally important and welcome is the freer offering of rolling stock. The Canada Atlantic Railway is not as heavily taxed by the grain traffic as it was during and immediately following the season of navigation, and it accordingly has more cars for the movement of lumber. The prospects for a brisk movement for many weeks to come are bright.

Jobbers have picked up several lots of lumber which failed earlier to secure purchasers for some reason or other. Building operations in many points in the States show increased activity, and this has given an impetus to the Canadian market, and in a measure induced an advance in prices.

All eyes are turned towards the limits, and reports therefrom confirm the statement that this will be a "big year." Thanks to the precautions taken by the Provincial Government and lumber operators, there has been no outbreak of smallpox which last year closed several camps and crippled others. While there is a scarcity of teams, this handicap in transportation facilities is offset by the frost and snow, which have made good roads.

While operations in the Temiscaming district are not as brisk as they were in recent years, there is a boom on in the neighboring Kippewa territory. Camps have been established in the latter by J. B. Grier, Montreal, Robert Anderson, Rideau Lumber Company, Edward Moore, Shepard & Moore and Hull Lumber Company, of Ottawa, and Alex. Lumsden and McLachlin Bros., of Arnprior. The output of square timber and logs promises to be as large as was predicted.

The Upper Ottawa Improvement Company is making active preparations for the assumption of the towing operations on the lakes and rivers of the upper country, but the season will be well advanced before the company will be in a position to assume control. Two steel side-wheel boats and a steel tug built in Toronto are now on their way to Temiscamingue, where they will be placed in shape for the water. A couple of alligator boats will be added to the fleet. When everything is in shape, the company will extend its operations from its present terminus at Des Joachims, near Pembroke, to the head of Lake Temiscamingue. Only the

movement of logs and pulpwood will be attended to. The shipment of freight and of passengers as heretofore rests with Mr. Alex. Lumsden, who formerly had charge of the towing operations as well.

Work is progressing favorably on Fraser & Company's new mill at Aylmer, Quebec, near Ottawa. This company has established a depot this season in the Pontiac district which was cut over several years since. The growth of timber in the last fifteen years, however, has been such as to warrant a resumption of operations.

Mr. Robert Hurdman, the veteran lumberman, is personally supervising operations on his limits in the Kippewa district as in past seasons.

Ottawa, January 31st, 1903.

LUMBER SUPPLY FOR HAMILTON.

Tenders are desired by February 17th for the annual supply of lumber for the city of Hamilton. The specifications are as follows: 3,000 feet 1 in. boards, 10 and 12 in. wide; 2,000 feet 2 x 4 in. scantling, 12 feet long; 10,000 feet 2 in. plank, 8, 10 and 12 in. wide, 6 feet long; 50,000 feet 2 in. plank, 8, 10 and 12 in. wide, 12 feet long; 15,000 feet 3 in. plank, 12 in. wide, 12 feet long; 25,000 feet 3 in. plank, 6 in. wide, 16 feet long; 40,000 feet 4 x 4 in. scantling, 12, 14 and 16 feet long (must be straight); 6,000 feet 4 x 8 in. timber, 12 feet long; 20,000 feet 4 x 12 in. timber, 12 feet long.

The lumber must be perfectly sound, cut from live pine timber, free from dead sap, wanes, dead knots and knot-holes, and of full dimensions and evenly cut, and be delivered in the City Yard, Wellington Street North, as required and not later than June 15th.

HARDWOOD LUMBER PRICES.

The National Hardwood Manufacturers' Association of the United States, at its first annual meeting held at Cincinnati last week, made some important advances in the prices of hardwood lumber. The new list is to take effect February 10, 1903, and fixes the following prices, Ohio River points taking 19 cent rate to New York or ten cents to Chicago:

Ash—1sts and 2nds, 1 inch, $38; 1¼ inch, $40; 1½ inch, $40; 2 inch $42; 2½ and 3 inch, $45; 4 inch $49.50. No. 1 Common, 1 inch, $24; 1¼ and 1½ inch, $26; 2 inch $28.50; 2½, 3 and 4 inch, $31. No. 2 Common, 1 inch, $13; 1¼ and 1½ inch, $15; 2 inch $16; 2½, 3 and 4 inch, $17.50.

Plain White Oak—First and Seconds, 1 inch, $37; 1¼ inch, $39; 1½ inch, $40; 2 inch $41; 2½ inch, $47.50; 3 inch $50, 4 inch, $52.50. No. 1 Common, 1 inch, $26; 1¼ inch, $27, 1½ inch, $28; 2 inch, $29; 2½ inch, $35; 3 inch, $36; 4 inch, $37.50 No. 2 Common, 1 inch, $15; 1¼ inch, $16, 1½ inch, $17; 2 inch, $18; 2½ inch, $21; 3 inch, $23; 4 inch, $26.

Quartered White Oak—1sts and 2nds, ⅜ inch, $35; ½ inch, $42.50; ⅝ inch, $50; ¾ inch, $57.50; 1 inch, $64, 1¼ inch, $66; 1½ inch, $67.50; 2 inch, $68.50; 2½ inch, $70; 3 inch, $72.50; 4 inch, $75. No. 1 Common, ⅜ inch, $23; ½ inch $28; ⅝ inch, $33; ¾ inch, $37; 1 inch $42; 1¼ inch, $46; 1½ inch $46; 2 inch $47.50; 2½, 3 and 4 inch, $50.

Soft elm, $17.50; soft maple, $20.

ORDERS PROMPTLY FILLED

GILMOUR & COMPANY, LIMITED

TRENTON, CANADA

THE BOSTON MARKET.

There has been a better demand for spruce lumber in the Boston market during the past week, principally yard orders, the dealers wishing to stock up against the spring trade. There is no change to note in quotations, prices being firm at: Ten and 12-inch dimensions, $21 to $22; 9-inch and under, $19 to $20; 10 and 12-inch random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50; 5-inch and up, merchantable boards, $17; matched boards, $18 to $20; out spruce boards, $13; bundle furring, $17.

Hemlock lumber is quiet but steady: Boards, 12, 14 and 16 feet stock, $14.50 to $15 for good eastern; Pennsylvania, No. 1, $18 to $19; No. 2, $15 to $16.

Western pine lumber cotinues very firm, though prices are not further advanced. The demand is steady: Uppers, 1 to 2 inch $84 to $87; 2½ to 3 in. $92 to $97; 4-in. $96 to $100; selects, 1 in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78; 2½ to 3 in. $84; 4 in. $86; fine common, 1-in. $67; 1¼ to 1½ in. $69; 2-in. $72; 2½ to 3 in. $80; 4-in. $82; barn boards, $23 to $33; coffin boards, $28 to $32.

There is a firm market for hardwood lumber, with a good demand, especially for best flooring. Prices are unchanged: Quartered oak, $63 to $75; plain oak, $42 to $47; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $45 to $47; sap and common, $30 to $35; brown ash, $41 to $44; white ash, $43 to $46; maple, $30 to $34; end-dried white maple, $42; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Shingles are quiet and unchanged at the recent decline: Extra cedar, $3.35 to $3.45; clear, $2.85 to $2.95; second clear, $2.30 to $2.40; extra No. 1, $1.75 to $1.80; British Columbia red cedar, 16-inch, five butts to 2 inches, $3.50 to $3.60; 18-inch, five butts to 2 inches, $4.25; five butts to 2½ inches, $4.50.

Spruce clapboards are quiet, with a small supply and prices steady: Extra, $43; clear, $40; second clear, $37 to $38; extra No. 1, $30 to $33.

Laths are quiet but steady: One and five-eighths inch, $3.35 to $3.40; 1½-in. $3.20 to $3.25.

WANTED

MESSRS JOSEPH OWEN & SONS, Ltd., of Liverpool, Eng., are open to treat for regular supplies of large quantities of HARDWOOD LUMBER, and will be glad to hear from holders who have to offer WHITE ASH, WHITE OAK, SCALY BARK and SECOND GROWTH HICKORY, POPLAR and WALNUT, in logs, planks and boards, also prime fresh BIRCH LOGS of large dimensions.

To the Lumber Trade

GENTLEMEN,—We beg to offer our services for everything you may want for your Camp Supplies. We handle everything in the Grocery Trade and specially cater for accounts such as yours. With some of you we have been doing business for a long time, which has been, we think, mutually satisfactory. We would like to increase our business with you and also those of you with whom we have not done business so far. We would like to quote you **Beans, Dried Apples, Evaporated Apples, Baking Powder, Syrup** in tins, pails, kegs, half barrels, etc, and in fact everything that you require.

Yours truly,

LUCAS, STEELE & BRISTOL,

Wholesale Grocers, HAMILTON, ONT.

THE TEMISCAMING DISTRICT.

Editor CANADA LUMBERMAN :

Dear Sir,—When I received the December edition of THE LUMBERMAN I noticed on the first page an illustration of a burnt forest in the Temiscaming district which called to my mind what I personally observed during my nine weeks visit to this same district last summer, and probably the following remarks may be of some interest to those who have not had the opportunity of travelling through this wonderful new country. On my arrival I was greatly taken up with the fine class of people who have ventured into this new land to hew out a home for themselves and their children. The impression which generally prevails amongst old Ontario men is that the Temiscaming is a great wilderness of rocky mountains and ravines, but I must confess that I was somewhat surprised to find a very level country, no mountains or ravines, but all clay soil fit to grow any grain sown on it. I have seen soil taken out of a well 17 feet deep and spread on the ground, which produced oats to the height of five feet. I have reason to doubt if the soil in old Ontario at 3 feet deep would give any better crop, or even as good. The district is most beautifully watered by small rivers and lakes.

The town of New Liskeard, no doubt the coming county town of West Nippising, is located on the the beautiful bay on picturesque Lake Temiscaming, and Wahby river flows down through the centre of the town and empties into the lake, and about three miles up this river there is a small stream from the south, which is fed from a large lake about 300 feet above the level of the "Temiscaming". I walked up this stream about 2½ miles and found in this distance no less than four water powers ranging from ten to twenty feet with any amount of water.

As you go up the Temiscaming about ten miles you come to White river, which flows from the north-west. This river is most beautiful, its width varying but little from the mouth where it empties in the lake to the head or rather to the falls, which is about 40 miles up. It is very straight, and the depth of water ranging from 15 to 40 feet. This river flows through a fine tract or clay land mixed with sandy loam. It is all settled along each side by men making farms for themselves. I bush-travelled over 35 miles of this country, examining the timber, and I was somewhat disappointed to find the timber very small, the average being about 15 inches. I expected to find large timber but only found such of white pine. The forest consists of spruce, cedar, tamarack, white birch, ash, elm and oak. I did not see in all my travels one hemlock, beech or hard maple tree, and I do not believe there are any in Temiscaming district. The spruce grows very close together on high land and is mixed with tamarack, which is principally all dead. The cedar is large. On the stoney ridges I saw trees from 2 feet to 4 feet on the butt. The white birch grows about 12 inches on butt on flat land, along with poplar, whitewood, elm and ash. Oak only grows on the White river tract, the variety being what we call white oak, very coarse in the grain.

I do not think that the Temiscaming will ever make a lumbering district for large logs and square timber—only for poles, ties and pulp wood for the Ottawa Valley, any quantity of this kind of timber. Those who like to bush tramp ought to take a few weeks in that new country and examine both soil and timber and you will never rue the time or money spent, and I warn you not to go out in sand-fly time.

Yours truly,
JAMES YORK.

LUMBER AND PULP MILL ACCOUNTS A SPECIALTY

....Correspondence Solicited....

Have YOU seen or are YOU using the

SLEEPER PATENT ENGINES for Steam Feeds for Saw Carriages?

THEY Reverse instantly, at any point, without special gear.
Are always under instant control.
Run without noise or vibration, and at very high speeds.
Are strong, rigid, and extraordinarily light, compact and portable.
Can be installed in almost any conceivable position.
Require no adjustment and very little attention.
Are the very latest, the very best, and by long odds the most economical engine on the market.

We also manufacture engines for every description of service, and of all powers. Direct-connected electrical units and small engines for general lumber and agricultural service are specialties of ours. Catalogs and prices upon application.

The **SLEEPER ENGINE COMPANY, Limited, Montreal.**

'Phone, East 2403. Office and Works, Cor. Darling and Notre Dame Streets.

WOOD PULP DEPARTMENT

PULP SHIPMENTS.

The annual export shipments of Canadian pulp are increasing very rapidly, and the reports for 1902 show a very favorable season's business. The future prospects of this industry are most encouraging.

Shipments made by the Belgo-Canadian Pulp Company, Shawinigan Falls, to Europe, from Three Rivers and Quebec, are as follows:—

Antwerp.....	12,855 tons wet pulp.
Antwerp.....	1,894 tons dry pulp.
Manchester.....	808 tons dry pulp.
Hull.....	954 tons wet pulp.
Newcastle.....	394 tons wet pulp.

With a large demand for Canadian wood pulp from all parts of the world, this new industry will soon become one of the leading features in regard to exports from the St. Lawrence ports.

THE BRITISH PULP MARKET.

The official returns of the imports of wood pulp into Great Britain during the first eleven months of 1902 were on a larger scale than during either of the two previous years, but the value shows a depreciation. The total quantity imported in that period was 469,882 tons, as compared with 404,581 tons in 1901. The chemical pulp consisted of 165,026 tons of dry and 120,002 tons of wet pulp. Of the mechanical pulp imported 283,956 tons were wet and 8,898 tons dry. The Scandanavians continued to enjoy a monopoly of the British market, although the Chicoutimi Pulp Company, Belgo-Canadian Pulp Company, St. John Sulphite Fibre Company and other Canadian firms exported largely to Great Britain.

Prices of chemical wood pulp were weak during the year. Business was difficult to arrange owing to the opposite views of sellers and buyers in regard to prices. The first quotations were at £8 to £8 7s 6d per ton, and later an advance was made of 2s 6d to 5s, but it was not maintained. The market became depressed, prices falling in August to the low level of £7 10s and advancing towards the close of the year to £7 15s.

The conditions mentioned affecting chemical pulp will apply also to mechanical pulp. Early in the year 50 per cent. moist (white) was quoted at £2 10s to £2 15s, and dry pine £5 10s to £5 15s. Subsequently the low level of £2 2s 6d for moist and £4 10s to £4 15s for dry pine was reached. These prices continued until the close of the year, and at the present time the market is weak.

PULP INDUSTRY OF THE DOMINION.

An interesting lecture on the wood pulp industry of Canada was recently given by Prof. D. P. Penhollow, of McGill University, Montreal, in the assembly hall of the Normal School, Ottawa, under the aupsices of the Field Naturalists.

The professor, in beginning, spoke briefly on the manufacture of paper in Japan. For a great length of time Japanese paper has been famous for its toughness, yet fineness of texture and the manufacture of it has received much attention from Europeans. They found they manufactured it from the pulp of the mulberry tree. The manufacture of paper out of pulp, the professor said, was of great antiquity, yet only quite recently discovered in this country.

He next referred to the enormous growth of the pulp industry in the United States and Canada during the last decade or so. Beginning with 1880 there were only 50 mills in the United States in 1890, while in 1900 the number had increased to 763, the value of the output being estimated at $167,000,000. While the devolopment of the industry did not begin so early as across the line, yet in the past few years it has received an immense impetus, a tidal wave of progression has seemed to sweep over the industry, and mills of enormous size have sprung up, as if by magic, in various parts of Canada. He also described in detail the manufacture of paper and by means of views carried on as it were the progress of manufacture.

PULP NOTES.

The price of ground wood pulp in the United States is about $13 to $14 per ton at the producer's mill.

Price Bros. & Company, of Quebec, are constructing a large pulp mill at Rimouski, to cost about $250,000.

The Trois Pistoles Pulp & Lumber Company, of Trois Pistoles, Que., has applied for a charter of incorporation.

The Union Power & Pulp Company, Limited, has been incorporated by the British Columbia Government. The capital is $25,000.

T. G. McMullen, of Truro, N.S., has in view the erection of large pulp and paper mills at Union, where a large dam has been built.

The annual meeting of the Chicuotimi Pulp Company was held in Quebec on January 8th, at which a semi-annual dividend of 4 per cent. was declared.

The North River Pulp & Lumber Company is making arrangements to commence the erection of a pulp mill at Murray, N.S., in the spring. It is proposed also to erect a large saw mill.

The British Canadian Pulp Company, Limited, are offering their stock to British capitalists. The company is capitalized at $500,000 and proposes to erect a pulp mill at North Bay, Ont.

Incorporation has been granted to the Imperial Pulp Company, Limited, of Toronto, with a capital of $90,000. The incorporators include J. H. Spence, J. R. L. Starr, A. W. Hunter and D. W. P. Hardistry, all of Toronto.

Considerable shipments of wood pulp are being made from Europe to the United States. The Zellstoff Fabrik Waldhof, with extensive mills in Germany and Russia, has increased its production from 60 tons to 120 tons per day, and is one of the leading exporters.

Negotiations are on foot between the Reid-Newfoundland Company and certain capitalists for the leasing of timber limits of the former with the object of starting pulp and paper mills. Grand Lake, Dear Lake and Codroy Valley are the centres where mills are likely to be built.

The Quebec Official Gazette contains notice of the incorporation of the Riviere Ouelle Pulp & Lumber Company, with a capital stock of $100,000. The incorporators include Hon. John Sharples, William Power, Gerald Power and Patrick B. Murphy, all of Quebec city. The company's timber limits are in the counties of Kamouraska and L'Islet.

The publishers of newspapers in the United States are making a strong effort to have the duty on wood pulp removed, and to that end propose to send a strong delegation to place the matter before Congress. The publishers will make a strong point of the fact that as it is now necessary to import heavily from Canada, the duty has become a burdensome tax on an important domestic industry.

The Ontario Government has approved of a new pulp concession in the name of the Rainy River Pulp & Paper Company, of which Hon. George E. Foster and W. J. Elliott, barrister, of Toronto, are directors. The company bind themselves to expend $75,000

within 2½ years in building a mill on Turtle Lake, above Fort Frances, on the Rainy River, and to make at least 20 tons of pulp daily. Their concession covers an area of about 100 square miles on waters tributary to the Rainy River.

A syndicate of American capitalists has been negotiating for the purchase of the Robitaille limits in the County of Bonaventure, Quebec Province. The property is 300 square miles in extent and is said to be worth half a million dollars, although the Robitailles are believed to have paid for it only $8 per square mile.

After nearly a year of experimenting A. Cushing & Company, of St. John, N.B., have succeeded in a process which converts the waste of their sawmill into a pulp that is used in the manufacture of cardboard. It is not an entirely new process, but is new so far as the pulp industry in the eastern provinces is concerned. The firm have built a small mill in connection with their sawmill, which takes all the waste, even to the bark. The particular machine in use is the joint invention of Capt. Ellis, former manager of the big Cushing pulp mill, and Geo. S. Cushing, and they have got it patented. The firm will probably add a cardboard plant. They would then have sawmill, box mill, pulp mill and cardboard mill under the one management.

The Sturgeon Falls Pulp Company, Sturgeon Falls, Ont., propose to operate their large paper mill by alternating-current induction motors throughout. Two Westinghouse type "F" motors are to be used to drive the variable speed shaft of the paper machines, and two 75 horse-power, type "C" motors will drive the constant speed line shaft of the same machines. Another 75 horse-power, type "C" motor will operate other machinery in the mill. A 15 horse-power induction motor will be direct connected to a triplex pump; one of 10 horse-power will drive the wet machines; a 20 horse-power motor will drive the agitators for the clay-mixing tanks and a 30 horse-power motor will drive the conveyors. The contract has been placed with the Westinghouse Electric & Mfg. Company, and includes also a 560 kilowatt, revolving field alternator, designed to be direct connected to a water wheel, with the exciter, switchboard and instruments to accompany the generator. The engineer and designer of the Sturgeon Falls plant is Mr. George F. Hardy.

Representatives of the pulp and paper manufacturing companies of the Dominion had an interview with Mr. Parent, Premier of Quebec, on January 25th. They endeavored to secure the Premier's support for their petition to the Federal Government, asking for an export duty on spruce logs and pulp wood at the rate of $1 per cord for the first year, $1.50 for the second year, $2 for the third year, and $3 for the fourth year and subsequent year. A cord to be of 128 cubic feet. Of the duty collected, 90 per cent. would be returned by the Federal Government to the land owners of the Government of the provinces from which the pulpwood would be taken. The Federal Government would retain ten per cent. to defray expensers of collecting, etc.

Capt. Ellis, late manager of the Cushing Sulphite Pulp Company, and Mr. George S. Cushing, head of the Andre Cushing lumber business, St. John, N.B., have patented a machine which, if it proves successful in its operation, will be a money-saver for lumber mill owners all over the country. The machine is a pulp grinder, and takes the small waste of a mill, grinding it into a pulp suitable for cardboard. One of these machines is now in operation at the Cushing mill near St. John, and mill men who have seen it express the belief that it will in time become one of the adjuncts of every saw mill. The machine's great advantage is that it takes all kinds of waste, with or without bark, and grinds it into a pulp from which cardboard can be made. Pulp men say the cardboard is of an excellent variety. The machine is simple in construction, easy and inexpensive to operate, and will make profitable an immense qnantity of material that has heretofore been burned on the refuse piles of the saw mills. With the installation of this machine for the small waste, and a box machine for the larger waste, the Cushing Company are utilizing about all their product.

THE NEWS

—Leon Gagne, jr., has started in the wholesale lumber business in Montreal.

—B. Bell & Sons, of St. George, Ont., intend building a new saw mill.

—Joseph Empey has sold his saw mill at The Brooke, Ont., to C. &. P. Empey.

—Butler Bros., of Woodstock, Ont., purpose establishing a lumber yard in Mitchell.

—The National Syndicate Match Company, St. Raymond, Que., has been dissolved.

—William Symington & Sons have moved their saw mill from Mara to Sebright, Ont.

—A new saw mill is being erected 100 miles above Whitney, Ont., by Mickle & Dyment.

—Owen Bros., saw mill, Richard's Landing, Ont., are advertising their business for sale.

—The Laurentian Lumber Company, of Montreal, is applying for supplementary letters patent.

—The Sussex Woodworking Company, of Sussex, N.B., have installed several new machines.

—Blouin & Brousseau, lumber manufacturers, St. Tite de Caps, Que., have registered partnership.

—It is rumored that McCormick & McLeod, of Orillia, Ont., intend building a saw mill at Fenelon Falls.

—J. Carew, of Lindsay, will operate the saw mill at Fenelon Falls formerly run by William Burgoyne.

—The Canadian Atlantic Railway Company proposes to extend its road from Whitney to Sault Ste Marie.

—Incorporation has been granted to the Christina Lake Lumber Company, Limited, Christina Lake, B. C.

—The East Kootenay Lumber Company, of Cranbrook, B. C., are building a tie mill on Moyie Lake.

—E. Gilbert has disposed of his lumber business at Bothwell, Ont., to C. W. Taylor, by whom it will be continued.

—Samuel Lane, who is building a saw mill at Denbigh, Ont., is talking of putting in cheese box, lath and shingle machinery.

—The firm of Cummings & Black, lumber manufacturers, Grand View, B. C., has been dissolved, Mr. Cummings continuing.

—H. W. Petrie, of Toronto, has shipped a complete saw mill outfit, including a portable engine and boiler, to Gustof Leidtke, Wilno, Ont.

—H. W. Woods, of Welsford, Queens County, N.B., has purchased a portable saw mill outtit through the St. John branch of E. Leonard & Sons.

—It is reported that A. J. DeLaplante, of the Laidlaw Lumber Company, Buffalo, proposes to retire from the company and go into business for himself.

—The Aptus Veneering Company, of West River, N. B., are installing additional machinery which will permit of the manufacture of much larger sheets of veneer than have formerly been made.

—The St. Joe Island Lumber Company has secured incorporation, with a capital of $ 75,000. The provisional directors are J. H. McCaul, J. McGugan, P. T. Roland, N. Simpson and J. P. Weeks.

—The saw mill of Shannon & Company near Prince Albert, N.W.T., is being reconstructed after the recent fire. Some of the planing machinery and one engine were situated in a detached building and were saved.

—The Canada Wood Manufacturing Company, of Toronto, has been incorporated, with a capital stock of $500,000. The incorporators include C. E. Stone and O.M. Hudson, of Toronto, and W. G. Morden, of London, England.

—Thomas Kennedy is building a new woodworking factory at Fort William, Ont., in which twenty machines are being installed. H. H. Dale is also building a factory at Fort William for the manufacture of sash and doors, etc.

—Mr. G. G. Gladman, of Carling, Ont., expects to have his new mill completed at an early date. It will be an up-to-date band mill with a capacity of sixty thousand feet per day. Power will be furnished by three boilers.

—It is the intention of the Shepard and Morse Lumber Company, of Ottawa, who have purchased the Mason saw mill at Bayswater, to remodel and extend the plant. This mill was originally owned and operated by William Mason & Sons.

—The Kilgour-Shives Lumber Company, of Campbellton, N.B., expect to have their new mill completed early in the spring. The main building will be 265 by 65 feet, with a wing 40x60 feet, and the capacity will be about 150,000 feet per day.

—David McNair, of Vancouver, B.C., is at the head of a company which will build a large shingle mill on Burrard Inlet, the site for which was purchased last month. No further information regarding the proposed plans has yet been given out.

—The Canada Lumber & Trading Company, of Vancouver, B, C., are building a saw mill on Howe Sound, to have a daily capacity of 30,000 feet. The timber will be carried to the mill by means of a chute seven miles long. The principals in the enterprise are J. G. Hutchison and C. R. Drew.

—It is understood that the Pacific Coast Lumber Company are considering the building of a large extension to their new saw and shingle mills at Vancouver, B. C. J. G. Scott, manager of the company, has secured an option on what is known as the floatiug dry dock property just east of the present mill.

—The improvements to the Pigeon River Lumber Company's saw mill at Port Arthur, Ont., have been completed, and the mill will be enabled to cut lumber the year round. In the winter the logs are dumped from the cars into a pond of water, which is kept above freezing by means of steam pipes.

The Industrial Publishing Company, New York, have issued a second edition of "Hardwood Finisher", compiled and edited by Fred T. Hodgson, of Collingwood, Ont. The second edition contains a new feature in the shape of an illustrated treatise on the preparation of woodwork by the joiner or cabinetmaker for the finisher. The price is $1.00.

—A number of lumbermen who put logs into the Vermillion river and its tributaries have organized the Vermillion Boom Company. It is the intention to improve the stream and drive the output under one organization, instead of each firm looking after its own logs as heretofore. It is estimated there is one billion feet of timber to come out of the different streams.

— The annual meeting of the British Columbia Loggers' Association was held on December 17th, when officers were elected as follows: W. H. Higgins, president; J. S. Emerson, vice-president; H. G. Ross, secretary- treasurer. It was decided to reduce the annual membership fee from two cents to one cent per thousand feet.

—The Spicer-Woods Company, of Vancouver, B.C., have awarded to J. Chase the contract for the construction of a timber flume on the Capilano River. The flume will be eight miles in length and two feet square in size, affording room for the largest shingle bolts. There is an average fall of more than 100 feet to the mile for the entire distance, and it is expected that the run will be made in half an hour.

—It is reported that a large saw mill, with one exception operated entirely by Chinese labor and owned by Chinese capitalists of Vancouver and Victoria, is to be erected on Burrard Inlet. The one exception to the operation of the mill entirely by Chinese is that of the engineer, who will have to be a white man, as no Chinese have yet taken out papers as stationary engineers, as required by the provincial government.

—The Hanbury Manufacturing Company, of Brandon, Man., are about to establish a saw mill at Crow's Nest Pass Railway, in the Rocky Mountains, where the company have purchased limits. A portable mill capable of cutting about 20,000 feet per day will be used. For lumber manufacturing in the mountains it has been found cheaper to use a portable mill than a stationary one, being more economical to move the mill to the timber than to bring the timber to the mill. The company will manufacture cedar, mountain tamarac and other varieties of timber, the product being shipped to their headquarters at Brandon. They are also extending their system of branch yards, which will hereafter be ten in number, distributed over a wide area. Notwithstanding that the company lost a considerable quantity of logs by freshets last spring, they have done a very large business during the past year, and, as above stated, are now making arrangements to greatly enlarge their operations during 1903.

—A meeting of the Provisional Committee of the Reading Camp Association was held at Lindsay recently, when officers were elected as follows: Honarary president, J. R. Booth, Ottawa; president, John Charlton, M.P., Lynedoch; first vice-president, A. P. Turner, Copper Cliff; second vice-president, E. W. Rathbun, Deseronto; treasurer, William J. Bell, Cartier; general secretary, A. Fitzpatrick, B. A., Nairn Centre; educational secretary, A. O. Paterson, Nairn Centre; literary secretary, E. A. Hardy, Lindsay. The work of distributing literature to the lumber and mining camps has been confined largely to Ontario, but it is proposed to extend the work to the other provinces.

TRADE NOTES.

Park Bros., of Chatham, Ont., have installed a new engine in Blonde Bros., mill in that city.

The M. Garland Company, of Bay City, Mich., recently made a shipment of saw mill machinery to the Mouthorp Lumber Company, of Cutler, Ont.

The Standard Dry Kiln Company, of Indianapolis, Ind., are sending out to their customers a very convenient and useful pocket memorandum book for 1903.

The Wisconsin Veneer Company, at Rhinelander, are increasing their dry kiln capacity, and have placed their order for additional apparatus with the American Blower Company.

The M. Garland Company, Bay City, Mich., have shipped a band mill carriage, equipped with their improved set works and drag offset complete, also a 20 foot Garland lumber trimmer, to Mack Dickinson, Tower, Mich.

The attention of lumbermen is drawn to the announcement of the Adams Wagon Co., of Brantford, Ont., which will be found on another page. We expect to be able to give in a future issue some particulars of this company's manufacturing plant.

The B. Greening Wire Company, of Hamilton, have as usual issued a most useful and attractive calendar, the date figures being large and discernible at a considerable distance. During last year extensive additions and improvements were made to the company's factory and offices.

The attention of our readers who buy machinery is called to the full page advertisement in this issue of the A. R. Williams Machinery Co., of Toronto. The company will be pleased to send a copy of their new stock list to any of our readers who may write for same mentioning the CANADA LUMBERMAN.

Messrs. Boynton & Company, 67 West Washington street, Chicago, have issued an attractive catalogue of the various lines of embossed and turned mouldings, spindles, ornaments, etc., manufactured by them. It is intended both as a catalogue and price list, and will be found very useful to users of such goods.

The Goldie & McCulloch Company, of Galt, Ont., have found the capacity of their works inadequate to meet the demand for their machinery, and have decided to erect new works about a mile from their present location. They have secured 26 acres of land, with railway facilities of the most satisfactory character.

Every owner and operator of a saw mill or woodworking factory should be interested in the advertisement in this number of the Hanchett Swage Works, of Big Rapids, Mich. This company makes swages for circular, band, gang and band resaws. The qualities of their swages is testified by letters of many of the leading mill men of the United States. The company now propose to enter the Canadian market and will be pleased to send full particulars of their goods to Canadian mill operators and supply firms who will write mentioning the CANADA LUMBERMAN.

An ad that sounds as if it meant what it said, is a good ad; the ad wherein the writer could not possibly mean all he says, is hopelessly bad.—Business Problems.

SUIT FOR DELIVERY OF POLES.

Judgment was given at Toronto, on December 10th, in the case of Phelps V. McLachlin, an action tried at Ottawa without a jury. The action was brought for damages for non-delivery of poles under a written contract under which, as the plaintiff contended he could not be called upon to pay untill the poles had been first inspected and passed by both parties and the defendants had supplied the cars and shipped the poles. The defendants contended that if the poles had been on the ground for 30 days and an estimate was made after the 30 days had elapsed the plaintiff was obliged to make immediate payment, otherwise they (defendants) were not called upon to deliver. Held, that both parties were wrong in their interpretation of the contract on these points, but that the plaintiff was justified in treating the defendant's letter to him of August 2, in which they refused to load the poles until payment, as a breach of contract to deliver and in rescinding the contract. Reference was made to the master at Ottawa to assess the damages the plaintiff had sustained from the non-delivery of such poles as defendants had on hand under the estimate (20,000), referred to in the contract and which would pass inspection.

Among the attractive calendars received by the LUMBERMAN for the New Year are those of Brownlee & Company and McClure, Zimber Company, wholesale lumber merchants, of Detroit.

A. F. Dudgeon, of Ashland, Wis., called at the offices of The M. Garland Company, Bay City, Mich., recently and placed a large order for saw mill machinery to be shipped to The Fred Robinson Lumber Company, Revelstoke, British Columbia. The order includes one Garland steam nigger, Kline patented log loader, two slashers, one combined gang and edger, twin engine steam feed, lumber assorter, transfers, carriers, etc.

ANNUAL MEETING OF LUMBERMEN.

The annual meeting of the British Columbia Lumber and Shingle Manufacturers' Association was held in Vancouver on January 19th. Mr. John Hendry occupied the chair.

The following officers were elected for the ensuing year: President, John Hendry, of the B. C. Mills, Timber & Trading Company; 1st Vice-President, E. H. Heaps; 2nd Vice-President, A. E. Carter, of the Vancouver Builders' Exchange; Secretary, R. H. H. Alexander.

Committees were appointed as follows:

Lumber Mills Branch—Chairman, P. D. Roe, of the Canadian Pacific Lumber Company; Vice-Chairman, J. G. Scott; R. Jardine, E. H. Heaps and E. C. Mahony.

Shingle Mills Branch — Chairman, T. Kirkpatrick; Vice-Chairman, W. Tytler; J. A. McNair, J. G. Scott and J. T. Hillis.

Sash and Door Factory Branch—Chairman, S. N. Jarrett; Vice-Chairman, J. W. Hackett; E. H. Heaps, E. C. Mahony and R. Jardine.

Box Factory Branch—Chairman, E.C. Mahony; Vice-Chairman, L. A. Lewis; D. B. Grant, T. Harvie and R. Jardine.

Contractors' Branch — Chairman, W. Hepburn; Vice-Chairman, S. J. Crowe.

The affairs of the Association were reported to be in a satisfactory condition, and hearty votes of thanks were rendered to the retiring officers.

A pleasing feature of the meeting was the handsome presentation made to the retiring Secretary of the Association, Mr. W. T. Stein, whose valuable services were readily acknowledged by the members.

The offices of the Association have been removed to the Thompson-Ogle Block on Hastings Street, Vancouver.

WORTH THE PRICE.

The Cleveland Box Company, Cleveland, Ohio, write:—"When your agent was here in November last, we paid him $1.00 for subscription to your paper for one year. We also placed an advertisement with him. We think the paper is worth all we paid for it and shall continue to subscribe for it."

Engines, Boilers and High Grade Mill and Factory Machinery and Supplies

Following are some of the Wood-Working Machines we have in stock now. **We are just issuing a new stock list No. 45 which we will gladly mail to any address on application.**

Surface Planers

5583.—Planer, iron frame, 36 in. wide, B. S. Nichols & Co., makers, Burlington, Vt. This machine is made especially for taking in doors, and is known as a diagonal door planer; cylinder is fitted with 3-42 in. new knives, one pair of 4½ in. geared feed rollers; this cylinder has been newly babbitted, bearings being 8 in. long; floor space occupied 68 in. long x 3 ft. 8 in. wide. This machine has been thoroughly refitted and is complete with countershaft, wrenches, etc. Maker's cut and printed description cheerfully furnished on application.

7921.—Surface Planer, planes 30 in. wide x 6 in. thick; B. D. Whitney, maker; is fitted with two pair of 3½ in. heavy geared rolls; cylinder is solid steel, 3 in. square, fitted with two 30 in. new knives, driven from both ends by 4 in. x 3 in. face drive pulleys; feed shaft has 2-step cone on, which gives the variety of feeds; is complete with belt tightener, countershaft, wrenches, etc., and is in first-class condition.

C6944.—Surface Planer, planes 28 in. wide x 3 in. thick, solid iron frame (Whitney type). This is one of Whitney's well-known smoothing planers fitted with one pair of 5 in. heavy geared feed rollers, also one 2½ in. delivery roll; cylinder is made of forged steel, 2¼ in. square, runs in heavy babbitted bearings, which are made long, and thus insures rigidity not otherwise obtained and also has two new knives fitted to cylinder, drive pulley being 4 in. diam. x 4½ in. face. This machine is in good condition.

7810.—Planer, 28 in. wide, Whitney pattern, made by Cant, Gourlay & Co., Galt. This machine is almost new and is of a very heavy pattern; bed has a drop of 6 in., with two pair of 5 in. diam. heavy geared feed rollers; cylinder 2½ in. square fitted with two 28 in. knives, cylinder is double belted, pulleys being 4 in. diam., 5 in. face; feed shaft has a 2-step cone, which permits fast and slow feeding. This machine will be found to give entire satisfaction where heavy dressing is done extensively. Write for price and any further particulars.

Planers and Matchers

1079. — 24 in. Double Cylinder Planer, Matcher and Moulder, McKechnie & Bertram, builders; planes 24 in. wide and from ⅛ in. to 5 in. thick; matches up to 12 in. wide; two pair heavy feed rolls 8 in. diam.; forged steel cylinders fitted with three and two knives for the top and under heads, respectively, furnished with a pair of brass shimer heads, all knives and cutters same as when new; full countershaft and hangers. This is a very heavy and substantial machine, and will fill the requirements of any shop requiring a large capacity; has been put in splendid shape and will give guarantee as to its giving A1 satisfaction. Weight about 7,000 lbs. Price, f.o.b., $450.

6234.—Planer and Matcher, planes 24 in. wide x 3½ in. thick; this planer is fitted with two pair of 4 1-2 in. feed rollers; cylinder is 3½ in. square, fitted with two new 24 in. knives, also drive pulleys on both ends of cylinder, 5 in. x 5 in. face; two matcher spindles 24 in. long, with 4 in. x 5½ in. heads; also drive pulleys, 4 in. x 4 in. face; is complete with countershaft and all parts. We guarantee this machine to be in good working order.

9394.—Planer and Matcher, long bed, planes 24 in. wide x 4 in. thick, 3 pair of rolls, all driven by power gearing, the cylinder is solid steel forging and runs in long bearings. The side head spindles are steel, have long self-oiling bearings and run in oil in bronze steps; the countershaft is attached to frame. This is one of Goldie & McCulloch's standard machines. Will be pleased to send full description and price on application.

8989. 9357.—The New Eclipse Planers and Matchers, 24 in. wide. These are two of our well-known machines, on which we hold the Canadian patent. Cut and full description on application.

C6454.—Double Planer and Matcher, 24 in., McKechnie & Bertram, makers. This is one of their standard make of planers and matchers so well known to the trade, and needs no further describing, is almost new and will be sold very reasonable.

Moulders

9521.—New 12 in. 4 side Moulder. This is one of Ballantine's latest machines. Table drops 16 in., the heads are forged from solid steel slotted on four sides and run in long self-oiling journals; the side spindles are large diam., made of refined steel, the bottoms rest on brass step in a reservoir filled with oil. This machine is furnished with patent guide spring adjuster; by turning small handle springs all move together; the feed is very powerful, consisting of 4 large rolls driven by cut gears; the bonnet of top cylinder is made to move back or forward, and swings clear to give free access to knives, four changes of feed. Descriptive circular sent on application.

8648.—12 in. 4 side Moulder, with 10 in. under head. This is one of Goldie & McCulloch Co.'s latest designs. Table drops 15 in.; it is 9 ft. 6 in. long and has broad base. The cutter heads are 5½ in. diam. and slotted on four sides, the side heads are adjustable vertically, horizontally, and angularly, spindles are steel and run in oil in bronze steps; table carrying lower head and side heads has moveable mouthpieces let in flush, which can be adjusted to close gap for lower head, back end of table swings clear of cutter head, giving free access to knives. There are four feed rolls 6 in. diam., all driven by heavy gear, upper rolls weighted to give parallel left; has only been in use a short time. A snap for anyone requiring a first-class moulder.

9413.—10 in. 4 side Moulder, Jackson, Cockran & Co. make. This is one of their latest designed machines. Heads are forged from solid steel and slotted on four sides. The journals are heavy and run in long self-oiling bearings; the frame is long and is well braced, and all working parts are of easy access for adjustment. The feed is simple and powerful, consisting of four large rolls, all driven by powerful gearing. This machine is as good as new. Will be pleased to quote price and send descriptive circular on application.

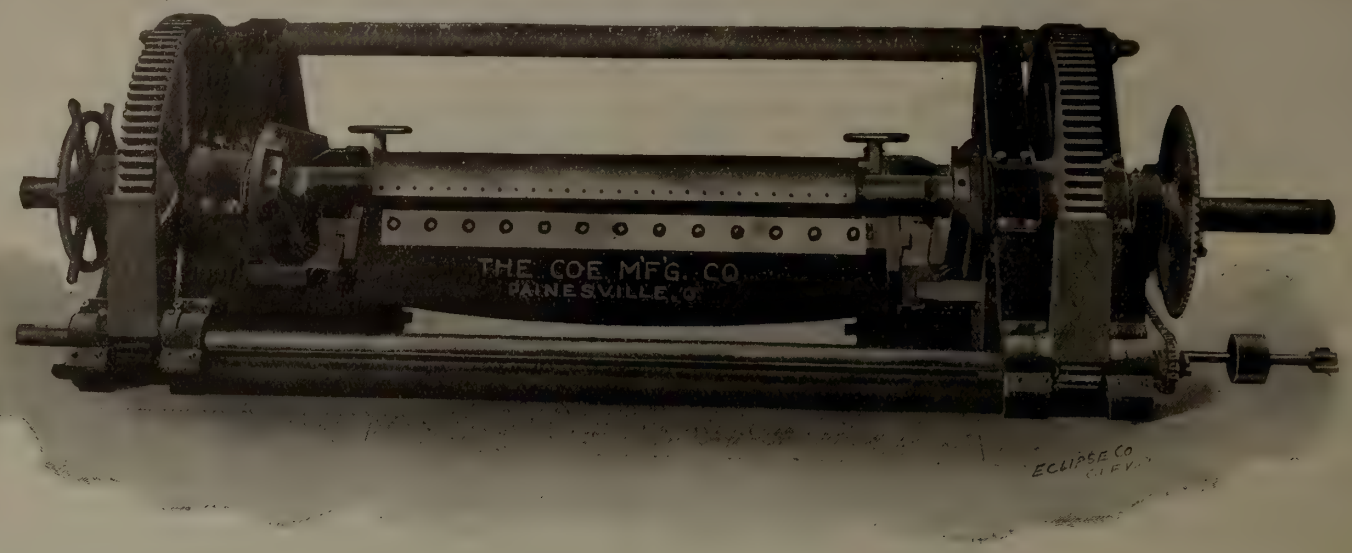
Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition to reduce logs into thin lumber and veneers.



The product is high grade.
The output is great.
The cost of operating and maintenance is reduced to a minimum.
Quite a combination, is it not ?

Timber and mill owners should get in early.
Buy a Coe Veneer Cutting and Drying outfit and prepare to supply thin lumber and veneers which have a healthy growing demand. More money in it than sawing your logs into lumber.

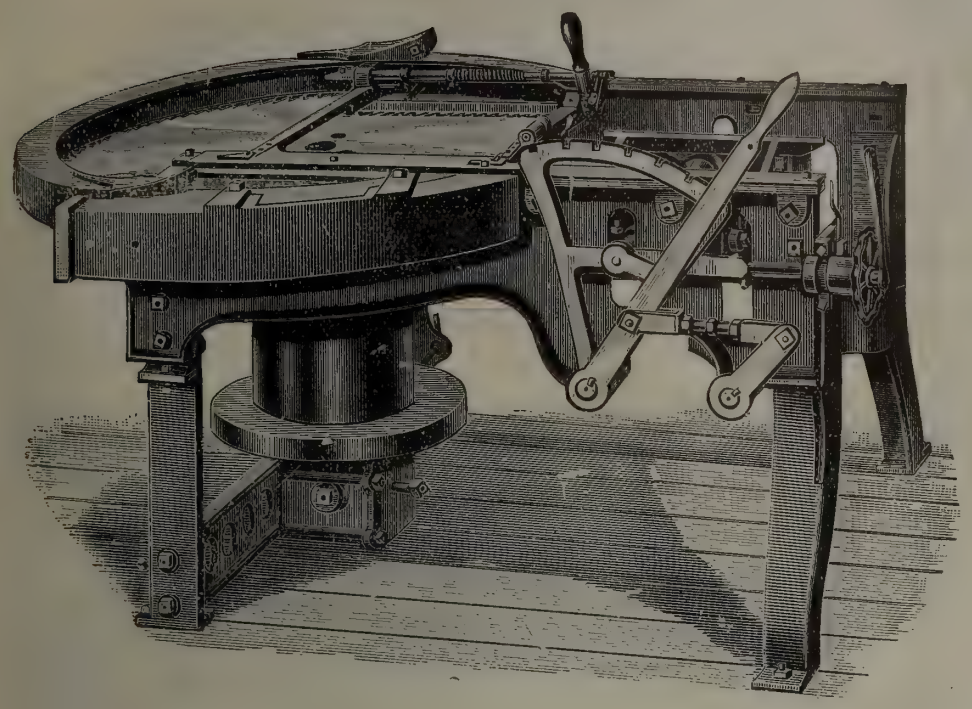
"DAUNTLESS" SHINGLE AND HEADING MACHINE



The strongest and most durable machine made. Made expressly for hard and fast work. Saws 40 or 42 inches diameter. Steel tubular carriage. Holds blocks up to 18 inches wide and any length to 20 inches or longer if ordered.

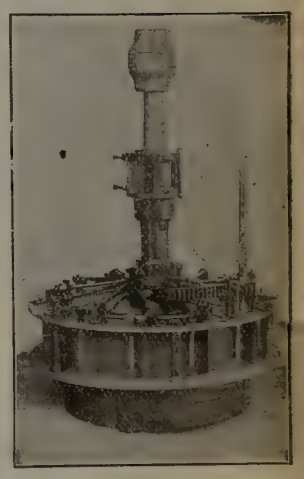
Any respectable sawyer can easily keep two good smart boys—or men either—busy jointing and they will have to hustle too to keep up. I furnish complete outfits. Let me quote you prices. Catalogues on application.

F. J. DRAKE, - Belleville, Ont.

Manufacturer of Saw Mill and Shingle Mill Machinery

Do You Need a Turbine?

Now is the best possible time for replacing your old, worn-out wheel with a new Turbine that will save Worry, save Time, and make Money for you. If you want a well built wheel, a wheel that will give you steady reliable power every day, a wheel that will save water, a wheel that will last you a lifetime, and that is sold at a reasonable price, then write us for catalogue and prices on the



Standard Leffel and Vulcan Turbines.

They are better developers to-day than ever before, and are growing in popularity, as our order books show.

We have now for distribution our new **SAW** and **SHINGLE MILL MACHINERY CATALOGUES,** with engravings and descriptions of our machines with their latest improvements. We will be glad to send you one on receipt of your address. You cannot buy a better Portable Mill than the "Lane Improved".

From Present Appearances

the Log Cut this Year will be Larger than in 1902

Some Lumbermen State

it will cost 15% more to manufacture their lumber this year than last year, including extra cost of cutting and delivering logs in mill.

What Are You Doing to Economize in Manufacture

to offset this 15 per cent. extra cost? If you are still running the old time Circular Saw a change to a Band Mill with its 14 gauge saw will give you 10 to 15% more lumber out of the same logs.

Thus Saving You in One Year

the entire cost of the change and the extra cost of this year's saw bill.

If You are Running one of our Band Mills Now

you can save this year's extra cost of manufacture by making your band over to a double cutting mill, using our special devices for this purpose.

You Will Increase the Output of Your Band Mill

at least 10,000 feet per day at no extra cost for labor, except the wages of one tail sawyer at log deck.

This Will Help You Out on This Year's Extra Large Log Cut and Save at Least All This Year's Extra Cost of Manutacturing.

The Change is not Expensive.

With Our Patent Devices the Lumber is Cut Perfectly True and the Boards Dropped on either side are exactly the Same Thickness.

No More Trouble to Keep Up Saws or to Run Mill than a Single Cutter.

No Difficulty is Experienced in Cutting Defective Timber to the Best Advantage with a Double Cutting Saw.

Changing the Single Cutting Band Mill inexpensively to a Double Cutter is one of the Most Progressive Changes in Lumber Making that has occurred for many years.

We shall be pleased to correspond with you on this subject, or in regard to any contemplated changes in your Mill.

THE "A B C" DRY KILNS

Simplicity and Economy of Operation.
Perfection of Product.

The Fred Macey Company, Grand Rapids, Mich., write :

"We have had ample opportunity to test the six 'Moist Air' Dry Kilns which you installed in our plant, and we find them to be entirely satisfactory. Our superintendent reports that they require very little attention, are economical and easily regulated, and the lumber comes out of the kiln in perfert condition to make high grade goods. We might add that our superintendent has had at least thirty years' experience in kilning lumber and he says these are the best he has had the pleasure of operating."

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

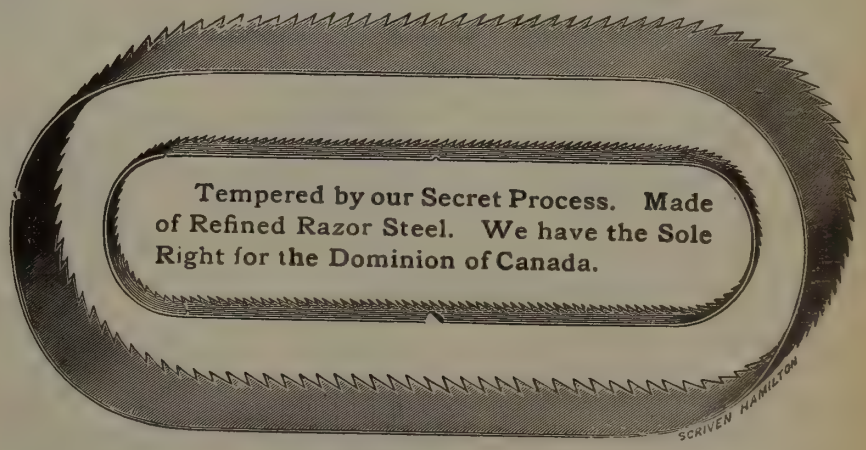
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

YOU SHOULD KNOW MORE ABOUT THE DODGE WOOD SPLIT PULLEYS : : :

The most critical manufacturers who have investigated every pulley manufactured pronounce the Dodge the best.

Dodge Wood Split Pulleys transmit from 25 to 60% more power with the same belt tension than any metal pulley on the market.

The Dodge is cheapest in first cost, easiest to install, attaches more easily to the shaft, costs less than iron pulleys, and being ¾ lighter than metal pulleys, transmit 50% more power than its metallic competitors of the same size.

We have a very fetching proposition to make in Dodge Wood Split Pulleys about which you should write to-day.

MR. ROBERT STEWART.

A VETERAN LUMBERMAN STILL IN HARNESS.

Mr. Robert Stewart, lumber merchant, of Guelph, Ont., whose portrait appears on this page, is one of the captains of industry whose individualities are special objects of interest to a large clientele of readers of the Continental press. He stands for all that is straightforward and successful in Canadian skill and enterprise. He is native born, and in this respect he closely resembles the greater number of Canadians who have been successful in law, politics, medicine and commercial life. His early years were spent on the home farm in the Scotch Block, Township of Esquesing, in Halton county, whence, at the age of seventeen, he went to Toronto, where he acquired that knowledge of his business which has since made him the proprietor of one of the largest planing mills and sash and door factories in Western Ontario.

Mr. Stewart has had one ambition, that is to succeed in and develop the business to which he has devoted the best years of his life. He has never sought public office. In politics he quietly supports the party of his choice and goes back to business again. Although having reached nearly four score years he is a splendid conversationalist. He has always been a busy man and probably will be to the end of the chapter. He faces the world with the independency of one who has always paved his own way.

When a man has been steadily running a constantly increasing lumber business for half a century, his reminiscences should be worth listening to. And so it is that when you want to know something about the difference between the lumber and sash factory business in 1846 and 1903 you can spend a pleasant and profitable hour with the subject of this sketch. He will tell you that he has seen lumber bought in Toronto at $4.50 per thousand feet, which to-day would cost $30. In those days joists 3x12x24 feet long were brought to Toronto at $5.00 per thousand feet; to-day the cost would be $30. Clear lumber in those days sold for $8.00 per thousand feet, and it was thought quite a run when it went up to $11. To-day clear lumber runs from $60 to $65.00.

Since locating in Guelph, in 1855, Mr. Stewart has seen clear 2 inch lumber brought to the Royal City at $12.00 per thousand feet, reculled there, and shipped six months afterwards to the Albany market at $17.00 per thousand feet.

In the days of Mr. Stewart's early experience a railway was unknown from a practical standpoint, all lumber was teamed in from the surrounding townships, and, as a natural consequence, the contrast between then and now is very marked. In those days, an ordinary mill would cut 1500 feet of lumber in twenty-four hours; to-day the average figure is about fifty thousand to sixty thousand feet.

Wages, too, have advanced considerably. Then, in Toronto, a laborer would do well if he got 75 cents per day, a first-class carpenter would draw $1.25, and a brick-layer $1.50 per

MR. ROBERT STEWART, GUELPH, ONT.

diem. Nowadays the laborer gets $1.50 and up, the carpenter $2.50 and up and the brick-layer $3.00 and up per day.

In the olden days the demand for lumber was limited and the supply unlimited. To-day the demand is unlimited and the supply limited. If they had possessed modern machinery in the old days a very short time would have sufficed to prepare all the material required for the building trade.

There were Walnut trees in those days that would be priceless at the present day. The lumber supply was close to hand. Nowadays the manufacturer has to go to Muskoka, Georgian Bay, British Columbia and the Southern States for his Cedar, Fir, Oak, Poplar, Cypress and Yellow Pine. In this connection, Mr. Stewart advocates the reforesting of our deforested timber lands, an increased study of arboriculture and a practical demonstration of such by our farmers. For every tree cut down a new one should be planted.

TRADE OPENINGS.

The Secretary of the Canadian Manufacturers' Association, Toronto, has received the following trade enquiries. The names and addresses may be obtained by applying to the publishers of this journal.

BUILDING MATERIAL — A firm in London, England, desires to procure an agency to sell on commission all kinds of building materials. Good references are sent.

BUTTER DISHES OF THIN WOOD—A firm in Glasgow doing a large business with the Cape desire to procure the above line of goods in Canada.

CHAIR STOCK—A firm of shipping and commission merchants in New York desires to get in touch with Canadian shippers of the above. They have facilities for introducing their goods throughout the whole of Australia and New Zealand.

OVERMANTELS—The agency in the United Kingdom for a Canadian firm of wood overmantel makers is wanted by a person qualified to undertake this business.

SKEWERS—An enquiry has been received from London, England, for the names of Canadian manufacturers of butchers' skewers.

SOFA FRAMES—A firm of shipping and commission merchants in New York desire to get in touch with Canadian shippers of the above.

TIMBER—A firm in Brisbane, Australia, desires to procure timber of different kinds and dimensions direct from Canadian mills.

WOOD FRAMES FOR WIRE MATTRESSES—A firm in Ilford, Eng., desires to procure wood frames for wire mattresses of various sizes and asks for quotations for same c.i.f. Liverpool, Bristol or Avonmouth.

WOODENWARE — A firm in Glasgow doing a large business with the Cape, desire to procure the above line of goods in Canada.

DOWELS, ETC.—A large importing firm in London desire to arrange for shipments of dowels and trunk laths. The details are:

DOWELS—Maple, birch and beech, from 3-16 in. to 1⅜ in. in thickness, and from 14 in. to 4 feet in length. Prices to be made per 1,000 lineal feet in carload lots.

TRUNK BATTENS OR LATHS—In ash and elm. Lengths, 26 in. to 45 in.; thickness, 1¾ in. x 7-32 in., and 2½ in. x ½ in., with chamfered or rounded edges. Prices to be made on 1,000 lineal feet, in carload lots.

HANDLES—Turned handles of all kinds.

Terms—2½% 90 days, draft against discounts.

The Dickson Company have commenced the erection of a new saw mill at Burnham's Point, near Peterboro.

MODERN SAW AND VENEER MILL.

The Algoma Commerical Company, Limited, of Sault Ste. Marie, Ontario, has just completed and put in operation one of the most up-to-date saw mills in Canada. It is equipped with two modern band mills and one "Wickes" gang, augmented with the latest automatic machinery for edging, trimming, and conveying the sawn lumber to the large sorting platform, where it is graded and piled on the dock for shipment by car or boat.

SAW AND VENEER MILL OF THE ALGOMA COMMERCIAL COMPANY, SAULT STE. MARIE, ONT.

The edgings and slabs are carried by conveyors over a set of saws that cut them into four foot lengths. From here they are conveyed through the lath mill, where they are sorted and all material suitable is worked into lath. The residue, with all the other waste from the mill, is conveyed to a grinder, where it is ground into small particles and conveyed into a series of pockets, from which it is dumped into specially constructed cars and conveyed to the charcoal plant, where it is used as fuel.

The capacity of the mill is fifty million feet annually of cork pine lumber, equal to the well known Michigan pine.

The mill commenced the winter's run about the middle of January. The logs are brought in by rail over the Algoma Central & Hudson Bay Railway and dumped into a mill pond, the water in which is kept hot by means of a system of steam pipes, freeing the logs of all ice, snow and frost.

The company also operates a combined saw and shingle mill at Searchmont, on the Goulais River, 35 miles north of the Soo. This mill has an annual capacity of ten million feet of lumber and fifteen million shingles.

In connection with the saw mill at the Soo, and adjoining it as shown in the illustration, the company has one of the largest veneer mills in the world. It is three stories high and covers an area of 150 feet by 200 feet. This mill is equipped with The Coe Manufacturing Company's latest improved veneer machines, wringers, hot roller dryers, and dry kilns. The veneers are taken from the machines to the second floor for cutting into the different sizes, when they are taken to the finishing room for sanding and polishing. The mill is equipped with a glueing room for making glued panels. This mill has a capacity of twenty million feet of hardwood logs annually.

There will be employed in these mills and in the woods about fifteen hundred men.

The International Lumber Company, Limited, are agents for the products of the Algoma Commerical Company.

A COLLINGWOOD WOOD-WORKING FACTORY.

Fourteen years ago Wilson Bros. leased a small factory on Hurontario street, Collingwood, where they manufactured a small quantity of woodwork for local building. The growth of the business since that time has been very rapid, and although several additions were made to the factory, it was found necessary last year to seek an entirely new location, where buildings to accommodate their extensive trade could be erected. Accordingly, they purchased a large block of land on the corner of First and Walnut streets and erected thereon the building shown in the accompanying illustration. The plans for the building were drawn by Mr. John Wilson, who aimed at "slow burning construction" with a view to minimizing the fire risk. The building is a two storey brick structure. The body of the main building is 80 x 100 feet. Running out from this in front is the office building. At the south of the main building are the engine room, boiler house and shavings vault. The engine room is 14 x 24 feet and the boiler room 16 x 34 feet. East of the boiler room are the dry kilns, of which there are two, 12 x 72 feet each, and a storage room 22 x 72 feet. The first floor is reached by a large power elevator having a platform 6 x 18 feet and a lifting capacity of 60,000 pounds.

WOOD-WORKING FACTORY OF WILSON BROS., COLLINGWOOD, ONT.

The first floor of the main building, 80 x 100 feet, is occupied by machinery and work benches and the foreman's office. The space over the main office, 24 x 30 feet, is used as a finishing room and that over the engine room as a glue room.

In designing the factory saving of labor and economy in manufacture were kept in mind. At the front and rear on the ground floor are large doors which slide up, permitting teams to drive through and placing the lumber where it is most convenient fot use. Everything is handled on trucks, which, with the elevator, enables stock to be moved to any part of the factory with dispatch.

The equipment consists of a complete outfit of the latest and most improved machinery for the manufacture of woodwork. For drying the lumber the moist air system has been adopted, the kilns being supplied by the Standard Dry Kiln Company, of Indianapolis, Ind. The shavings and other waste material are carried by a patent shaving exhaust, which is connected with every machine throughout the building, to the shavings room 14x16 feet and thirty feet high, where the refuse is stored for fuel.

Power for driving the machinery is furnished by a modern high pressure boiler and a 100 h. p. Wheelock engine. A dry pipe is used, which ensures the steam passing into the engine in a perfectly dry state. The water passes through a Moffat heater and purifier and into a Northey duplex steam pump, by which it is forced into the boiler.

Messrs. Wilson Bros. manufacture doors, sash, frames, and everything in the line of woodwork required in the construction of a building. They manufacture a large number of stairs ready to erect, also hardwood flooring. Their business extends to all parts of the Dominion, they having made shipments to Truro, N. S., in the east and to Vancouver, B. C., in the west. They also ship to the United States.

THE LUMBERMEN'S ASSOCIATION OF ONTARIO.

The annual meeting of the Lumbermen's Association of Ontario took place at McConkey's Restaurant, Toronto, on Tuesday, February 17th. After a splendid luncheon, provided by the Board of Management, had been partaken of, the President, Mr. John Waldie, announced that there would be no toast list, but that the association would be glad, before commencing the business meeting, to hear some remarks from Hon. G. W. Ross, Premier of Ontario.

The Premier was very brief, simply acknowledging the invitation and complimenting the association upon its success. The association had been found very useful in assisting the Government in the adoption of the manufacturing clause, which had proved of great advantage to the province.

The minutes of the previous meeting and the financial and statistical reports were read by the Secretary. The President submitted his annual address, as follows:

PRESIDENTS' ADDRESS.

At this our annual meeting, we must recognize that for the industry we represent the times are exceedingly kind, and never in the history of Ontario has lumber reached a higher figure than prevails to-day. Never before have bills for lumber been more promptly met.

All through the past year prices have steadily advanced, and the demand for all kinds of sawmill products has been good, and we enter the present year with a moderate stock of sawn lumber to meet the ever-increasing local and foreign demand, and holders of lumber need fear no drop in prices for the next six months.

Although the prices are very high, in view of the advance in stumpage and labor, the percentage of profit is not excessive. Wages for work in the woods, with board, in the year 1897 averaged $16.00 per month, and since that time there has been a steady increase, so that wages have just doubled in five years. Thus, the advance in wages has kept pace with the advance in lumber. The same advance has taken place in many of the items of supply, especially in the price of horses. In 1897 the average price per horse was $65, and in 1902 $175. It will therefore be seen that the high price and advance on lumber has been proportionately distributed between labor and capital.

The only irritant and drawback to a state of complete satisfaction on the part of the lumbermen is the scarcity of cars for transportation. The transportation conditions of this country have not kept pace with the growth of the country. The railway management have within recent years frequently advanced rates, but in no case have they increased the facilities so that the traffic supplied could be promptly handled. A very largely increased tonnage would give a greater profit to the road, and bear less heavily upon the industries of the country. The Directorate of the Canadian Pacific Railway are to be commended for their recent decision to expend a large amount on the betterment of the road and increase of their equipment, seeing that a 5 per cent. dividend on common stock to the original subscribers is a liberal one. We also congratulate the Grand Trunk management on their decision to improve their line by the use of new capital, rather than increasing their rates and lessening the facilities for the local business on their road.

This Association was organized with a view to bringing legislation into force that logs taken from territory under license, the property of the Crown or People, should be manufactured in this country. The Ontario Government has since added to that the condition that pulpwood aud hemlock (both the tree and the bark) when taken from the Crown lands, shall be manufactured or used in Canada. This Association has never desired, nor does it desire in any way, to interfere with the freedom of the owner of timber on deeded lands, and in view of the prosperity that has been attained through the Provincial Act, we desire to express our regret that any appeal has been made by the paper makers of this country to place an export duty on pulpwood when our Provincial legislation gives all the protection necessary. It only remains for the other Provinces to follow the example of Ontario, and put in force regulations so that the timber wealth of this country, belonging to the Crown, shall be disposed of for the benefit of Canadians.

We are quite willing to emphasize the motto "Canada for the Canadians," and this can be done most efficiently by Provincial control over Provincial property, rather than by interference through the Dominion Government by placing an export duty on the property of the Crown belonging to a Province.

We desire to repeat a statement made some years ago that this Association has made no concerted effort with a view to raising prices, nor is there any encouragement offered to combines or monopolies, but we have contented ourselves with the market prices given by the ordinary working of the law of supply and demand.

We desire to again express the conviction of this Association, that the time has arrived when both the Dominion and Provincial Governments should stop granting subsidies to promoters for the purpose of building railroads to open the country. Where roads are requisite let the Governments of the Dominion and Provinces join hands in the building and owning of the road, and let the transportation companies operate on terms so as to give a fair return for the work performed. This might be acomplished by the Dominion constructing a trunk line from ocean to ocean, and the Provinces building the branch lines.

In view of the advantages already derived by joint action, and for the purpose of objecting to any legislation prejudicial to the interests we represent, this Association has fully justified its formation, and its continued activity along the same lines we trust will make for the development of the country.

The reports above mentioned and the President's address were unanimously adopted.

The President, referring to the requisition of the pulp and paper manufacturers for an export duty on pulpwood, said that the moment it was applied the lumber interests of the United States would clamour for an increased duty on lumber, as provided for by the Dingby bill. The question of controlling the timber lands should be left entirely in the hands of the provincial governments. It was unfair that conditions applying only to Quebec and New Brunswick should be permitted to affect the whole Dominion. Ontario and British Columbia had met the situation by enforcing a home manufacturing clause, and the other provinces should have sufficient courage to do likewise. There was a probability of another session of the Joint High Commission in the near future, and he thought it should be distinctly understood that the lumbermen of Ontario are not willing to waive the mannfacturing clause under any consideration.

Mr. John Bertram made some forcible remarks against any interference with the prevailing timber regulations. As many Americans had, as a result of the saw-log legislation, established mills in Ontario, it was doubly, he thought, the duty of Canadians and the Governments of the country to protect their investments. Under no consideration would the association agree to an export duty on pulpwood or logs of any kind.

Messrs. Robert Watt, W.D. Lummis, H. S. Brennan, Robert Laidlaw, John Conlon and others announced their sympathy with the sentiments expressed in the President's address, whereupon Mr. Bertram moved the following resolution, which was seconded by Mr. James Playfair and carried unanimously:

"That the address of the President of the Ontario Lumbermen's Association be adopted, and that a memorial be presented to the Dominion Government that in view of the serious international questions which may arise by the Government of Ottawa acceding to the request recently made to them by some of the pulp men of Canada that an export duty should be placed on pulpwood, it is the opinion of this Association that no export duty should be placed on any product of the forest, but that the timber, being the property of the Provinces, the policy of dealing with it should be left in their hands."

It was also resolved that the meeting heartily endorse the resolution passed at the last annual meeting of the Canadian Forestry Association, as follows:

"In view of the enormous loss of timber by fire, this Association, embracing a membership from all parts of the Dominion, having at this its annual meeting had under consideration the great mistake that has been made in the past by opening up for settlement land unsuitable for agricultural purposes but adapted for the growth and production of timber, would respectfully urge on the Governments of the Country both Federal and Provincial the necessity of greater attention in future to this important subject. The Association would further urge in order that this may be intelligently done that the newer and unsettled portions of the country should be explored in advance of settlement."

Referring to the above resolution, Mr. Bertram urged that every lumberman should endeavor to adopt such methods of cutting and preservation as would perpetuate his timber supply. The state of Michigan, he said, had appointed a special commission to endeavor to buy back about 4,000,000 acres of deforested land with a view to the cultivation of trees thereon.

ELECTION OF OFFICERS.

The election of a board of management for the ensuing year resulted as follows: President, W. D. Lummis, Toronto; first Vice-President, R. Laidlaw, Toronto; second Vice-President, George Thomson, Goderich; Secretary-Treasurer, W. B. Tindall, Toronto. Board of Management—J. B. Miller, W. B. McLean, W. P. Bull, Toronto; R. H. Roys, Sandwich; J. S. Playfair, D. L. White, Midland; C. Beck, Penetang; W. J. Ard, South River; W. J. Sheppard, Waubaushene.

Officials of the Quebec Government who have completed a survey of the vast territory, state that there are fully 65,000,000 acres of good spruce and pine lands lying between Lake St. John and the James Bay. This is all in the hands of the government, but will be placed at auction in parcels of 10, 15 and 25 miles upon request. Heretofore the territory lying on the Ontario side of the boundary has received most attention, and it is well bought up. The tide of investment is turning towards Quebec, however, and in the past few years limits have greatly increased in value. The territory is, according to the government reports, well watered and marked by several good water powers. Thus everything facilitates the promotion of the pulp industry.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:

IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance . $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

LUMBERING AND SETTLEMENT.

For a great many years the difficulties arising from the conflicting interests of lumbermen and settlers have been recognized by the Government. As early as 1860 the Ontario Government passed an act defining the rights of the license-holder and the settler, and at intervals since that time new acts or amendments have been passed. It cannot be charged, therefore, that there has not been a proper recognition on the part of the Government of the necessity of protecting as far as possible the interests of both parties.

In the early days, when timber was regarded as of little value, the problem of controlling in a peaceable manner the operations of both the lumberman and the settler was not a difficult one. As the country became more largely developed, and timber comparatively valuable, the situation assumed a more complex aspect, and to-day the exact lines upon which agricultural settlement and lumbering shall be carried on, so as to prevent a conflict of inerests, is one of the most important subjects with which the Government has to deal.

Canada is in need of population. Restrictions, therefore, which would retard the settlement of the country, or at least that portion of it which is suited to agriculture, should be discouraged. On the other hand, the granting of permission to settlers to take up land in the timbered districts which is not adapted to agriculture is neither in the interest of the settler or the country.

The memorial of the Ontario Lumbermen's Association, urging that the Government give more attention to restricting settlement exclusively to suitable agricultural lands, and that new territory be explored in advance of settlement, carries with it the unanimous support of the lumbermen of Canada, and no doubt of all having the interests of the country at heart. At the same time, the difficulties with which the Government have to contend must not be underestimated. Unfortunately, under the system of free grants by which lands are alloted to settlers, it frequently happens that the "so-called" settler selects his location on account of the quantity of timber upon it rather than because of its suitability for agricultural purposes. No dues are paid on the timber cut for clearing pnrposes, which he knows can be marketed at profitable prices. It is not uncommon to find that after the timber has been taken off, the land is abandoned. Thus the lumberman, if it be licensed land, loses his timber and the Government the timber dues. This policy of confiscation is often carried still further by the settler seeking another location for a similar purpose, perhaps securing it in the name of a friend. Another result of the presence of the "bogus" settler is his indifference regarding the proper protection of the forest from fire.

In the opening up of New Ontario the Government should, and no doubt will, give careful consideration to the preservation of the timber, which is the most valuable asset in the possession af the Crown to-day. New Ontario now being covered by a coniferous forest, the necessity of protective measures is more apparent than when it was a mixed growth. The Government, therefore, should not allow settlers to set out fires except by permission of a Government officer. This, we think, is one way in which the existing regulations could be made more efficient.

DEMAND FOR WOODEN BLOCKS.

Mr. R. E. Gosnell, of the British Columbia Bureau of Information and Immigration, has, at considerable labor, compiled and issued a booklet for the purpose of showing the demand which exists in Great Britain and elsewhere for wooden blocks for pavements. The data which he presents is of great value, showing as it does that the field is capable of greater development.

Mr. Gosnell, doubtless an impartial authority, reaches the conclusion that the result of experiment and extended experience in Great Britain is in favor of wooden blocks as the most permanent and generally the most satisfactory paving material. He thinks that the failure of wooden blocks in many places was due to the local conditions, and in other instances to imperfect construction.

As nearly as can be estimated, there were used last year in fifty-five cities in Great Britain and Ireland wooden blocks to the value of $1,500,000. Many of the city engineers had never tested Canadian blocks, but expressed to Mr. Gosnell, indirectly, their desire to see samples of British Columbia timber which might be suitable for the purpose.

The blocks were obtained very largely from the Baltic and Australia, and while varying in size in different localities, the average dimensions were 9 inches long, 3 inches wide, and 4 or 5 inches deep. The price paid was about $50 per thousand blocks delivered.

Tests that have been made in Great Britain of Canadian spruce and red pine for paving purposes have given good satisfaction. That our timber has not been more largely used in this way seems to be due to a prejudice against it which exists in some quarters, and for which no reasonable explanation is offered. It is probably due to a lack of familiarity with the Canadian product, and if Mr. Gosnell should, by means of his recent investigations, be the means of broadening the market for Canadian paving wood, he will deserve the thanks of the timber trade.

KEEPING IN TOUCH.

While lumber is not subject to violent fluctuations in price, as is the case with grain, cotton and other staple products, it is marketed so widely that it is necessary for the successful manufacturer or dealer to have facilities for keeping in touch with the changing conditions. The merchant who relies upon the knowledge obtained from his immediate surroundings is not likely to be very accurate in his estimate of future values. The shrewd buyer or seller will carefully consider the conditions not only in the home market in which he may be trading, but also those in outside countries which may have even an indirect bearing upon prices.

Some lumbermen are well informed at all times as to market conditions; others do not give this phase of the business sufficient attention and are losing money thereby. One circumstance which tends to lessen the interest of a lumberman in the market value of lumber is the policy, now so common, of placing the entire cut under contract at the beginning of the season. As soon as the contract is closed the manufacturer loses his grip upon the market. For the balance of the season his attention is devoted to the manufacturing end of the business and to making preparations for work in the woods. Doubtless there is an advantage in being able to give his undivided attention to these branches, but it is the experience of those who have been so situated in the past that when the time arrives for entering into negotiations for the disposal of another season's cut, it is more difficult to get an intelligent grasp of the situation. Never was this better illustrated, nor the advantage of being closely in touch with the market more keenly realized, than at the present time, when Ontario log run pine is selling at record prices.

The manufacturer should not only endeavor to increase his store of knowledge by every available means, but he should also impart information at every opportunity when by so doing his personal interests are not likely to be affected. The trade journal, for instance, looks to the manufacturer for information, and if this is not forthcoming it is impossible to place before the trade the statistics and other data which the paper should contain. Occasionally the CANADA LUMBERMAN has been unable to secure all the information contemplated, but as a rule the trade has responded liberally to our requests.

DEATH OF MR. WILLIAM LOCHEAD.

THE CANADA LUMBERMAN learned with deep regret of the death of Mr. William Lochead, which occurred at the Hotel Dieu, Windsor, Ont., on February 12th, as the result of blood-poisoning caused by removing a blackhead from his temple with his finger nails. Mr. Lochead was well known to many members of the lumber trade, who will mourn the loss of one held in high esteem and much respected.

Deceased had been in the employ of Mr. A. A. Scott, of McGregor, Ont., as book-keeper and secretary, for a number of years, which position he held up to the time he was taken ill. He enjoyed the confidence of both his employer and the employees. Prior to engaging with Mr. Scott he was associated in business with his father in Almonte, Ont., where he was born. Their business extended to Ottawa and Toronto, where deceased was well and favorably known. His mother, who resides at Osgoode Station, Ont., was with him during his illness. His remains were taken to Almonte, where they were laid at rest in the family burial plot on Saturday, the 14th of February.

THE LATE E. R. BURNS.

The death occurred at St. Michael's Hospital on February 9th of Mr. Eugene R. Burns, senior member and manager of the E.R. Burns Saw Company, Toronto. Mr. Burns was taken to the hospital suffering from a growth in the mouth. Two operations were performed, on the 3rd and the 9th ultimo. The gland was removed, and then the enlargement. The second ordeal took place in the morning, followed by death at night.

The deceased came to Toronto 15 years ago. Prior to that time he was for some years connected with Shurly & Dietrich's saw factory at Galt. A wife and five children survive.

LOW RATE INSURANCE FACILITIES.

It may be said that eight or nine years ago there was practically no insurance company confining itself to the underwriting of lumber and woodworking risks. There was no general organization of lumber dealers at that time which could analyze the situation and undertake the establishment of a company devoted to the interest of lumber dealers. However, one of the first activities of the National Wholesale Lumber Dealers' Association of the United States, on its organization, was to agitate the subject of insurance. It was found that there was a prevalent belief among the members of the association that the rates then prevailing were too high. Statistics were gathered among the members of the association showing the amount of money paid out for insurance premiums, and amounts of losses collected, and it was found that over a period of several years the ratio of losses to premiums paid was less than 17 per cent. These definite facts based on actual experience strengthened the feeling that companies should be organized for the double purpose of giving an immediate advantage to the lumber trade by a reduction of rates, and to serve as a protest against the exorbitant rates fixed by the old line insurance companies then in the field.

The first companies organized to do business along these lines were the Pennsylvania Lumbermen's Mutual of Philadelphia, the Lumbermen's Mutual Insurance Company of Mansfield, Ohio, and the Lumber Mutual Insurance Company of Boston. These three companies have pursued successful careers for eight years, each one having built up a surplus and all having paid dividends to their policy-holders ranging from 10 to 25 per cent. annually.

The insurance organizations directly the outgrowth of the efforts of the National Wholesale Lumber Dealers' Association, as stated above, are the Protective Trust Fund and the Lumber Underwriters. The Protective Trust Fund is now in its fourth year. Having been established as an experiment in underwriting wholesale lumber risks only, its field of activity is confined to the members of the National Wholesale Lumber Dealers' Association, and it is not open to accept insurance from the general lumber public.

The company which has probably attracted the most attention is the Lumber Underwriters, of 66 Broadway, New York. This concern has had a history of ten or twelve years standing, but has limited itself absolutely to lumber risks for a period of two years only.

The Lumber Underwriters has operated along somewhat novel lines, in that there is no representation by local agents in any part of the country, all business being done direct with the policy-holder. Applications are received at the home office, and when it is necessary that an inspection be made, a representative of the company is sent to look over the property to be insured. The Lumber Underwriters has found it possible to insure lumber risks at somewhat lower rates than the so-callad tariff rates. During the past year they have accepted insurance on lumber risks at an average discount of 15 per cent. off the tariff rate, and during the present year on account of the 25 per cent. increase in rates made by Tariff Association Companies, they are accepting insurance at the old rates which were in force last year, so that the advantages by way of a reduction in rates are obvious.

It is a favorable sign that lumber dealers throughout the country have so extensively undertaken the underwriting of their own property. The fact that they are now maintaining six or more responsible organizations is ample proof that there is a real demand for companies which shall devote themselves to the interest of the lumber trade. The question naturally arises as to what is to be gained by the policy-holder in insuring with these organizations.

Up to two or three years ago the companies then operating labored under difficulties. The wholesalers carrying insurance to the amount of hundreds of thousands of dollars on single risks protested that the companies in the field could not offer a sufficient line to interest them. From the retailers these companies heard the argument that even though the cost of outside insurance was less than that which they would be compelled to pay through local agents, they would prefer to patronize the local agent as a matter of expediency.

In a measure both of these objections have now been overcome. To the wholesaler requiring a large line of insurance, these companies offer a maximum line of possibly $35,000 or $40,000 on a single risk. Now that all of the old line insurance companies have advanced rates on lumber and woodworking risks 25 per cent., the retailer is disposed to accept the inducement of a lower rate offered by the lumber insurance companies, feeling that it is better to sacrifice the slight amount of business which might be secured from the local agent rather than to fail to protest against an increase of rates which he believes to be unjustified.

As a consequence at this time large numbers of lumber dealers are turning to their own trade companies for insurance, and the companies are experiencing a decidedly marked increase in their business.

There is one word to be added in regard to this matter of insurance. The justice of the recent advance in rates on lumber risks is seriously questioned by lumber dealers in all parts of the country. It has been amply proven by the experience of the lumber insurance companies that this class of business is profitable and it is believed that this class has paid a profit to the old line insurance companies also. Since the lumber insurance companies openly acknowledge the fact that the business is profitable and are willing to accept the old rates without demanding an increase lumber dealers are to-day finding that in the trade insurance companies they have facilities open to them which they perhaps have not sufficiently appreciated in the past.

FULL OF TRADE NEWS.

M. Clingen, Martintown, Ont., writes of the CANADA LUMBERMAN: "I find the journal interesting and full of trade news."

MANUFACTURERS' ACCOUNTS.

A book bearing the above title has been compiled and published by Mr. W.C. Eddis, F.C.A., President of the Institute of Chartered Accountants of Ontario, and Mr. W. B. Trindall, A. C. A., of Toronto. The work is intended to be a text book for manufacturers and accountants, showing how to keep manufacturing accounts, both as regards to cost and records of manufacturing, and also as regards the keeping of the commercial accounts where these accounts refer to the cost and profits of such manufactured goods. The attention and care which has evidently been given to the compilation of this book makes it of great value to manufacturers. Besides submitting approved and useful forms for recording the cost of manufacturing, specimen accounts of varied manufactories have been worked out and illustrated.

Of special interest to readers of this journal is Chapter IX, devoted to lumber manufacturers' accounts. The systems outlined in the book are, for example, adapted to the case of a manufacturer who is presumed to be the owner of timber limits from the Ontario Government, also timber on land purchased in fee and the owner of certain of the permanent improvements on the streams made for the purpose of driving or floating logs to the mill, which is built for the manufacture of lumber, shingles and lath. The various forms shown in this chapter include the following: Account in General Ledger; Provision Account; Stable Account; General Expense Account, Van Account; Wages; Head Office —Account in Camp Ledger; Operating Account; Form of Time Sheet Used at Camp; Wages Book; Report of Lumber, Lath and Shingles Sawn; Specimen of Lumber Sales Book; Shingle Mill Account; Log Trading Account; Lumber Trading Account; Trading Shingle Account; Lath Trading Account, etc.

The book may be obtained from the authors, 23 Toronto street, Toronto, or from the publishers of the CANADA LUMBERMAN. The price is $3.00.

THE OVERHAULING SEASON.

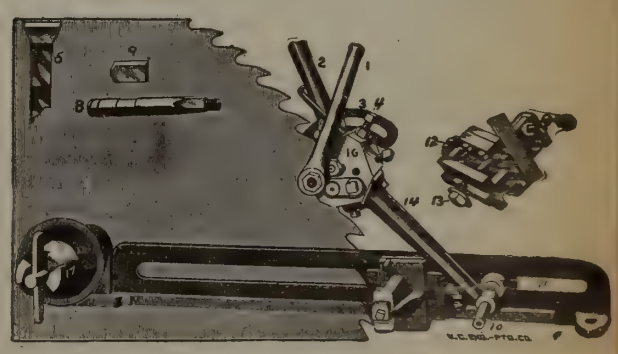
At this time of the year every progressive owner of a saw mill or wood-working factory examines carefully his machinery equipment and puts it in condition to operate to the best advantage during the coming season. Machinery found to be out of repair is put in good order, worn-out machines or machines that are found to be uneconomical are discarded in favor of up-to-date appliances. If deemed advisable extensions are decided upon, and the necessary new equipment purchased and installed.

The advertisement pages of the CANADA LUMBERMAN contain the announcements of the leading Canadian and American manufacturers of machinery tools and supplies of every kind required by lumbermen and woodworkers.

It will pay our readers to consult our advertisement pages for anything they may require and to write our advertisers for prices and catalogues, etc., mentioning THE LUMBERMAN. If something is required which is not advertised, advise us and we will supply the name and address of the manufacturer.

THE HANCHETT SAW SWAGE.

A good saw swage is a very essential part of the equipment of an up-to-date saw mill. The Hanchett



Swage Works, of Big Rapids, Mich., whose advertisement appears in this paper, have had a long experience in making all kinds of saw swages and their products are No. 1 in quality and are in use in some of the largest mills in the United States.

TREATMENT OF SECOND-GROWTH WHITE PINE.*

By Wallace I. Hutchinson, Wolfville, N.S.

(Continued from February issue.)

To be ranked as first class timber a tree must be tall, straight, free from branches, and tapering as little a possible. If heavy thinning is done during the early years of the growth straight, clean poles are not as a rule produced —that is, not in the same degree as when the woods are kept dense and the lower branches die off gradually from lack of light. Nor can we make up for this by pruning, though it may be beneficial to some degree. Heavy thinning gives an increase of light and consequently produces a more rapid diameter growth and coarse-grained timber.

In the case of the white pine thinning should be carried on lightly until the end of the principal height growth, which occurs when the trees are about forty years old. Then the hinning should gradually become heavier, in order to assist the selected trees by the removal of all inferior and diseased ones. The thinning should be done more among the dominating and dominated trees than among those which have fallen far behind in the race, although the latter may be allowed to remain to assist in the protection of the soil or as wind-break.

Young White Pine Growing Under White Oak and Pitch Pine.

If the woodlot in question does not consist of a pure stand of white pine, but is intermixed with hardwoods, the plan of thinning must be slightly changed.

The most important tree, which in this case is the white pine, must be favored in every way possible. Inferior hardwoods may be allowed to remain for a certain length of time to act as nurses for the young pines, but after their periods of usefulness for this purpose is past they should be removed. This removal should not be done too rapidly, as in many cases shade is beneficial and the pines will not stand a too rapid opening of the forest cover. After the nferior trees have been removed and the pines have firmly established themselves thinning may be commenced.

What hardwood species are allowed to remain depends largely upon the commercial value of the different kinds of wood. Perhaps the trees to be favored next to the White Pine, in a mixed forest, are the White Oak and Chestnut, both of which are healthy and vigorous trees of high commercial value.

In a woodlot of considerable size the whole area need not be thinned in one winter, as this would cause the owner needless expense. Let him cut out gradually the timber he may need for firewood and fence posts, and within a few years his whole stand will be cleared. In some cases it may be necessary to lay out a small sum per acre for this work, but the added rapidity of growth and the consequent increased value of the trees will in the end more than compensate for the money expended. Extreme care should be taken that the remaining trees and undergrowth are not injured by the removal of the timber and brushwood.

Thinning, if carefully carried on, is of great value in the production of high-grade timber. It affords a means of directing the growth of the wood, either towards the production of the greatest quantity or the best possible quality. Further, it preserves a suitable proportion of species in dealing with mixed woods. The danger from insects and fire is lessened by the prompt removal of dead and diseased trees, and thinning strengthens the selected trees against the injurious effects of wind and snow.

When it is the farmer's object to produce the best quality of timber—that is, long, clear boles—it is necessary that the trees should lose their side branches to a certain height from the ground. The lower branches of trees growing in crowded woods die naturally, owing to the lack of light. This is a very marked characteristic of the white pine, as its branches often die to the height of 30 feet, which is also true of all light-demanding species of conifers. Sometimes the dead limbs drop quickly to the ground; in others they remain for years, eventually producing knots. If the lower branches do not drop off naturally, they are

Example of Bad Pruning; Stumps of Branches Left.

usually removed by artificial means, and to this process is applied the term pruning.

The pruning of live branches is done to increase the value of the timber, stimulate the expansion of the crown of the tree, and also to free the young growth from the too dense shade of the overhanging trees.

Pruning to free the undergrowth from a too dense cover is usually done in woods consisting of timber of different ages. In many cases

Good Pruning; Branches Cut off Even With the Pole.

one may find a stand where a valuable slow-growing species is liable to be shaded out by a poor, faster growing one. In this case it is preferable to prune the undergrowth rather than remove it altogether. We often notice trees which have been subject to unfavorable conditions showing signs of failing strength in their crowns. To remedy this, usually a good part of the lower limbs should be removed. This allows the tree to use all its nourishment to strengthen the crown, and in many cases this extra stimulus enables it to pass the danger point.

It is very seldom a tree is injured by the removal of dead branches. On the other hand, it may greatly reduce the danger from rot, as the tree soon covers over the opening with new layers of wood.

But a different state of affairs is met with in the pruning of green branches. Here the wound caused by the removal of the limb often

A Tree that Has Been Attacked by the Pine Weevil.

becomes the point where fungi enter. The white pine has, however, peculiar methods for overcoming this evil effect. Shortly after the limb is removed the wound is covered by a gummy sap, which protects the cut from disease until it is able to heal over, so that in a few years after careful trimming we have practically a clean bole. Pruning, however, in a crowded stand, where the limbs die naturally to a considerable height, should be confined to the dead branches exclusively.

For a farmer the easiest implement to prune with is a good sharp axe; if wielded with accuracy, it is as good as a saw, as it leaves a smooth surface wound. Besides, pruning with an axe can be done more rapidly. It must, however, be carefully handled, as reckless cutting is apt to do considerable damage to the bark. It is a waste both of time and of energy to prune a tree above a height of eight feet, which is about as high as an average man can reach with an axe and cut carefully. The branches should not be pruned in such a manner that short stumps are left sticking out from the stem, but should be cut even with the trunk. The best time for pruning is undoubtedly in the fall or early winter.

As so many of our eastern white pine woods are seriously affected by the pine weevil, attention should be called to it. The presence of the insect is first manifested by the wilting of the terminal shoot, which, if examined carefully, will be found completely mined by the insect larvæ. A tree thus damaged will fail for several seasons to send forth a terminal shoot, with the result that the lateral branches strive with one another to gain supremacy. It is at this point that the owner of the wood lot can materially aid nature in her efforts to again produce a normal tree. A limb should be selected to take the place of the leader, and in making a choice its thriftiness and relation to the tree should be considered. After a choice has been made all the other branches of the whorl should be removed, thus giving the newly-chosen leader every opportunity to develop. If the work has been judiciously done, the tree may again assume its normal shape in after years.

MICHIGAN'S LUMBER INDUSTRY.

By Our Travelling Representative.

The first day of February saw me "on the road" again, bound for Michigan, Wisconsin, Illinois, Missouri, Indiana, Pennsylvania and Ohio. Leaving Toronto I made stops at Hamilton, London, Chatham, and Windsor long enough to see that the lumber trade was flourishing at these points. A great many of the small dealers were anxious as to whether they would be able to get a supply this coming season—many preferring to wait until the mills were running before giving their orders.

Coming over to Detroit I visited many of the leading lumbermen of that city, all of whom greeted me cordially, and I was glad to make the acquaintance of Mr. Jas. Harmon, Geo. Morley & Company, Dwight Lumber Company and others, all of whom appear to be thriving.

Up at Port Huron I found the Pere Marquette Ry. making arrangements for their intercolonial trade. They will now run direct into Canada over their own line. They have ordered 5,000 new freight cars and 65 new locomotives, many of which will be delivered this month. Three additional car ferries with a capacity of 32 cars each have been ordered—two of them to run between Port Huron and Sarnia. Local dealers say this will facilitate the railway haul of lumber from Canada.

I reached Detroit a couple of days too late to attend the annual meeting of the Michigan retail lumberman, which I was very sorry to miss.

From Port Huron to Saginaw I passed through what was once an immense pine forest—now only blackened stumps indicated where once the giant pines stood.

Between Tappan station and Abbotsford there is considerable second-growth and scrub trees of various sorts—none of any great utility. Everything marketable appears to have been cut down. I passed one or two genuine snake rail fences, and miles upon miles of stump fences.

Statistics show that the lower peninsula of Michigan is now practically denuded of all its pine. Hemlock and hardwood is going the same way. Last year 1,846,104,979 feet of all kinds were cut in the state.

Mr. E. D. Cowles, of the Courier-Herald staff, Saginaw, is acknowledged to be the best authority on lumber statistics, having made it a special study for over 30 years. To him I am indebted for much information regarding Michigan's declining industry. His statistics show an instructive object lesson of the diminishing forest preserves of the state.

The last year has been a prosperous one for the lumbermen. While theout put in the state fell off, the manufacture of hardwood and hemlock assumed large proportions. In speaking to Mr. Cowles he said:—"Twenty years ago a Michigan lumberman would not have recognized a hemlock log if met face to face on a skidway, there being no market for that timber, but conditions have changed and the output of hemlock the last two years has about equalled that of pine."

I asked Mr. Cowles as to the pine product, and he stated:—"It is pretty nearly exhausted in the lower peninsula, but there is a large body of fine hemlock and hardwood timber available."

The prices for lumber in this state during 1902 and up to the present ruled firm, with an active demand during the entire year. The output of the state for 1902 was 717,183,671 feet of pine, 699,011,487 feet hemlock and 438,809,821 feet of hardwood. The shingle output was 1,545,231,000.

The production of lath for 1902 amounted to 303,311,000 pieces. The quantity of lumber in the hands of manufacturers and dealers at the close of the season was 197,877,000 feet. At the close of the year there was a comparatively small quantity of unsold lumber in the hands of manufacturers. Many of the dealers' yards that I saw were also denuded.

The high water mark for the production of lumber in Michigan was in 1881, the output that year exceeding four billion two hundred and ninety million feet. More than words these figures show the steady decline since that year:—

1888	4,292,189,914 feet.
1889	4,207,741,224 "
1890	4,085,767,849 "
1891	3,580,531,668 "
1892	3,794,256,754 "
1893	3,147,996,147 "
1894	2,730,657,861 "
1895	2,731,029,535 "
1896	2,166,252,982 "
1897	2,335,674,349 "
1898	2,158,343,122 "
1899	2,328,575,135 "
1900	2,369,951,918 "
1901	1,998,347,000 "
1902	1,846,104,979 "

There has been a corresponding increase in the lumber shipped from Canada to this state. One hundred and fifty million feet of Canada pine came to the Saginaw river alone in 1902.

The largest firm in Saginaw, Mershon, Schuette, Parker and Company, handled 98 million feet of pine lumber last year. They have 34 million feet of white pine left in stock, and have bought 50 million feet in Canada to be delivered this season.

The Saginaw Lumber & Salt Company, Booth & Boyd, Briggs & Cooper, etc., all do a very large

Lumber Product of Michigan in 1902.

	Pine cut, feet.	Hemlock cut, feet.	Hardwood cut, feet.	Total district cut, feet	Shingles No.
Saginaw district	34,986,671	37,302,487	33,976,821	106,265,979	2,610,000
Lake Huron shore district	12,500,000	80,500,000	22,100,000	115,100,000	54,000,000

Mackinaw division M. C. R. R.	73,387,000	80,450,000	32,400,000	186,237,000	55,500,000
Pere Marquette R. R. mills	5,500,000	53,250,000	52,500,000	101,250,000	219,300,000
G. R. and I. R. R. mills	27,500,000	35,100,000	72,000,000	134,600,000	79,000,000
Green Bay, Mich., mills	92,150,000	97,149,000	24,978,000	214,277,000	413,349,000
Lake Superior district	333,500,000	68,675,000	71,250,000	503,525,000	289,617,00e
Misellaneous mills	9,500,000	48,970,000	60,430,000	118,900,000	157,800,000
Total state product	717,183,671	699,011,487	438,809,821	1,846,104,979	1,545,231,000

business. There are, however, no new mills going up and very few that are putting in new machinery. Among the Michigan firms who are now supplying Canadian lumbermen and their mills are the following: W. B. Mershon & Company, Morley Bros., Wickes Bros., Mitts & Merrill, A. F. Bartlett & Company, of Saginaw; J. Garland & Son, of Bay City; the Rogers Iron Mfg. Company, of Muskegon, and the Hanchett Swage Works, of Big Rapids.

I had very pleasant interviews with Messrs. Parker, Jno. S. Porter, R. Loveland, Arther Hill, Stone, J. D. Draper, Thos. Jackson, Henry E. Lee, Briggs & Cooper, Charles F. Nelson, Kerry & Schultz, and some other well-known Saginaw lumbermen I am indebted to for favors received.

I was very glad to hear that Mr. John S. Porter, President of the Porter Cedar Company, had been appointed State Salt Commissioner.

Mr. Thos. Jackson, I found at West Saginaw, was inclined to think Canada had been very slow in awakening, and "even at the present time," he said, "your mills and shops are filled with old men and boys—the strong young blood of your country having gone to the States." I reminded him of the fact that 35,000 American citizens had settled over the border during the past year, but he thought something was wrong when our own young men did not find inducements to stay in Canada.

Mr. H. J. Gilbert, vice-president and manager of the Saginaw Mfg. Company, came over to Canada last year after spruce. He got what he wanted, but owing to an accident to his vessel and consequent delay the article was not got across in time before the close of navigation.

A dealer in Saginaw said that the lumber market was in good condition, and but for the poor railway facilities there would be no cause for complaint. It is claimed that it takes three weeks to get cars of lumber to points a hundred miles from Saginaw. It is said that by April 1st dealers will advance prices 50 cents to $1 a thousand; others think that there will be such a large cut that the bottom will fall out of the market.

The A. W. Wright Lumber Company are going out of business. I also heared the same of C. Merrill & Company. Bliss & Van Auken told me they had dropped the wholesale business.

Near the Johnson street bridge in West Saginaw I saw a yard or piling ground reclaimed from the river lowland years ago—made by piles of lumber covering the low ground, and from ten to twelve feet in depth. There seemed to me to be a couple of millions of feet of lumber used here in the years of plenty to form a piling. Alas, it is all rotten now.

When I was in Saginaw a case was being tried in the county as to the value of some timber in Kentucky. The testimony went to show that the available supply would be exhausted in three years. It was necessary in the trial to locate a creek and one of the witnesses asked if he knew where Hell-for-Certain Creek was. "Yes," he answered, "I have been through Hell for Certain!" The judge and the whole court roared.

At Bay City I was pleased to meet Mr. Miller, of Bradley, Miller & Company, Mr. Foss of E. B. Foss & Company and Mr. Glosser, of the Wolverine Lumber Company. These concerns are all progressive, as are also the Handy Bros. The latter have a capacity of six carloads of box shooks per day and use up 25 million feet lumber in a year. The four Handy Brothers are also miners and shippers of coal. They showed me an excellent article, for which I predict an immense sale in Canada, where they intend to market it. Both this company and the Wolverine Company promise to come in our advertising columns.

E. B. Foss & Company and Bradley Miller Company each handle about 40 million feet of lumber annually.

Mr. Selwyn Eddy, with whom I had a short conversation, had just arrived from Canada, where he had been regarding his lumber interests there He was preparing for a trip to California.

A large number of Saginaw and Bay City people are interested in Canada now more than ever owing to the extensive operations of Michigan lumbermen in Canada.

Holland & Graves operate a large plant at Byng Inlet. They have employed about 900 men during the winter and will get in fifty million feet of logs to be manufactured this season. This plant was moved from Tawas, Mich., a few years ago to Byng Inlet. Mr. Holland, of this firm, is one of the pioneer lumbermen of Michigan, and operated a saw mill many years at Saginaw. He now resides at Buffalo.

The St. Anthony Lumber Company, at the head of which is Arthur Hill, of Saginaw, operates a big plant at Whitney, Ont., on the C. A. R., 180 miles from Ottawa. The company built last year, a logging road about 15 miles long and are putting in a stock of fifty million feet for the cut of the mill this spring.

The Saginaw Lumber & Salt Company built a large saw mill and salt works at Sandwich, Ont., in 1900, and operated it last year, cutting 20,000,000 feet of lumber. Their timber is in Georgian Bay district and they raft the logs to Sandwich. They are getting in a stock of 25,000,000 feet of logs to stock the mill with this year.

Edmund Hall, of Detroit, who has a s saw mill at Bay City, Mich., has also a large saw mill at Sarnia, built two years ago. They manufactured over 20,000,000 feet of lumber last year. His timber is in the Georgian Bay district and a full stock of logs is being cut for the mill the ensuing sawing season.

The Cleveland & Sarnia Saw Mills Company, formerly operating a saw mill near Marquette, Mich., have a large saw mill at Sarnia and are manufacturing over 30,000,000 feet of lumber annually. Their logs are rafted from Georgian Bay district.

The estate of Wm. Peter, formerly of Toledo and Michigan, operate a saw mill at Parry Sound, which cuts 25,000,000 feet annually and a full stock is being secured for the present year's cut.

Mr. Peter formerly operated a saw mill at Bay City, Mich., but when it became no longer possible to raft logs from Canada to Michigan, he moved over to Canada. His son now resides in Toledo, where the head office is situated.

The Moulthrop Lumber Company, formerly of Bay City, operate a saw mill at John's Island, Georgian Bay, and cut 23,000,000 feet of lumber last season. It will have a full stock of logs for the ensuing season.

The W. & A. McArthur Company bought a saw mill at Little Current, Ont., after operating many years at Cheboygan, Mich. They are operating ten logging camps this winter and are putting in a full stock. The mill cuts about 30,000,000 in a single season.

At Cutler, Ont., N. N. Wright & Company have a large saw mill. This firm is composed of Ralph Loveland, E. P. Stone and N. N. Wright, all experienced Saginaw lumbermen. The mill will cut 45,000,000 feet of lumber this year and is to run day and night. The entire cut has been sold to eastern parties at $2 advance over the same grade of stock last year. The firm has just bought 4,000,000 feet of cut logs and 25,000,000 feet of standing timber, being the township of Dowling. This company and the Saginaw Lumber and Salt Company together employ over 1300 men and 400 horses.

Eddy Bros. & Co., at Blind River, Ont., have a large saw mill there which was moved from Bay City, Mich. They cut 25,000,000 feet and will have all the logs they can manufacture this season. They own a large block of timber in Canada.

The Michigan Land & Lumber Company, of Bay City, operate a large saw mill at Blind River and will manufacture 25,000,000 feet of lumber in 1903. The company is getting in a full stock of logs.

The Turner Lumber Company, at the head of which is Joe Turner, of Bay City, Mich., is putting in 30,000,000 feet of logs to be manufactured at Midland, Ont.

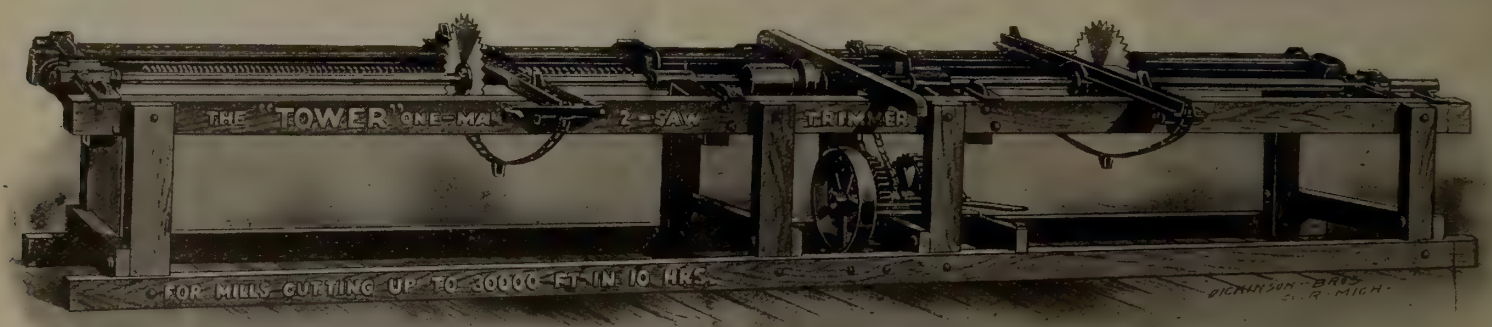
The Huron Lumber Company at Spanish River, Ont., is being stocked by the Spanish River Lumber Company, and will cut 15,000,000 and perhaps more this year. The mill is owned by Mr. McCormick, of Bay City.

The foregoing are the principal lumber firms of Michigan operating now in Canada.

Mr. Cowles states that fully 300,000,000 feet of lumber, which is to be manufactured in the Georgian Bay district the present year, has been sold already, or nearly one-half the entire output of the mills in that district, and at an advance of $2 a thousand feet compared with prices which the same grade of stock sold at last year.

AN EXTREMELY SIMPLE TRIMMER.

The acme of simplicity in trimmers, both in construction and in operation, is claimed to have been reached in the "Tower" one-man 2-saw trimmer, manufactured by the Gordon Hollow Blast Grate Company, of Greenville, Michigan.



This trimmer is shown in the accompanying illustration. Both saws are operated by the same crank, moving toward each other or in opposite directions at an equal rate, the distance between increasing or decreasing two feet at each complete revolution of the crank. This crank is carried by one of the head blocks. Thus the operator shifts the saws as he walks toward the board to be trimmed. Hence he is ready to lay the board on the trimmer the instant the saws are properly set. This saves time.

Another very important featufe about the "Tower" is the feed works. These are composed of gears, which ensure positiveness and accuracy. There are two feeds, which can be started, stopped or changed without stopping the saws. The same lever controls both feeds.

With this trimmer one man can easily trim the output of a mill cutting up to 30,000 feet in ten hours.

As our readers doubtless know, the Gordon Hollow Blast Grate Company claim to be the largest manufacturers of blast grates, edgers and trimmers in the world.

WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

The annual meeting of the Western Retail Lumbermen's Association will be held in the city of Winnipeg on Tuesday, March 31st, and Wednesday, April 1st. Several matters of importance will be considered and a large attendance of members is anticipated.

THE NEWS

—W. H. Woodruff has purchased a saw-mill at Colebrook, Ont.

—Potter & Son, of Tottenham, Ont., will build a saw mill at Beeton.

—P. H. Clark has purchased and is refitting a mill at Huntsville, Ont.

—Amasa Brown, of Salisbury, N.B., is about to erect a shingle and lath mill.

—Buchanan & Lawson have purchased the Morris planing mill at Goderich, Ont.

—The Canadian Elevator Company is opening a lumber yard at Regina, N. W. T.

—The Adams Lumber Company will erect a sash and door factory at Lethbridge, N.W.T.

—R. M. Fullerton has been admitted as a partner in the Hayes Lumber Company, Elko, B.C.

—The Conger Lumber Company, of Parry Sound, Ont., has installed a new lath machine.

—It is reported that Knight Bros., of Burk's Falls, Ont., intend building a new factory.

—Hind & Brownword are building a shingle mill on Howe Sound, B. C., to comprise four machines.

—James R. Peterson, late of Collingwood, is opening a sash and door factory at Sault Ste Marie, Ont.

—A. Blain has sold his lumber business at Crystal City., Man., to Robertson & Adams, of Snowflake.

—A bonus has been granted to J. D. Pennington, of Dundas, to establish a wood-working factory at Dunnville, Ont.

—The Delany-Pettit Company, of Toronto, have erected a factory to be devoted to the manufacture of excelsior.

—D. McNair has been granted foreshore rights to a piece of land at Vancouver, B. C., on which to build a shingle mill.

—It is understood that the G. & G. Flewelling Company will rebuild their saw mill and box factory at Hampton, N. B.

—The Marysville Lumber Company, of Marysville, B.C., has been incorporated, to operate a saw mill and deal in lumder.

—Large quantities of hemlock bark are being sold in the vicinity of Haliburton, Ont. The average price is $5.50 per cord.

—Lemon, Gonnason & Company, of Victoria, B.C., intend establishing a saw mill as an addition to their sash and door factory.

—D. Adams, of Victoria, B.C., is making preparations to re-open his saw mill on Rock Bay, which has been idle for a number of years.

—The Sussex Foundry & Machine Company, Sussex, N.B., has amalgamated with the Sussex Woodworking & Electric Light Company.

—The Abbotsford Lumber Company, Limited, has succeeded the Abbotsford Lumber Company, with a saw mill at Abbotsford, B.C.

—Lequime & Company's saw mill at Smelter Lake, near Rossland, B.C., has started operations. The capacity is 30,000 feet per day.

—Captain Garland has decided to erect a saw and shingle mill on False Creek in British Columbia. Cedar will be handled exclusively.

—The Fernie Manufacturing Company, Limited, of Fernie, B. C., has been incorporated to carry on a lumbering and manufacturing business.

—By the bursting of a fly-wheel of an engine in the saw-mill of Thomas Dougall, at Kentville, Ont., the engineer, Robert Ennis, was instantly killed.

—The dry kiln in connection with the sash and door factory of D. G. Loomis & Sons, Sherbrooke, Que., was almost completly destroyed by fire last month.

—The Bryan Manufacturing Company, of Collingwood, Ont., have made extensive improvements to their factory and installed a new band saw and engine.

—John McGuirl has sold his lumber business at Moosomin, N. W. T., to the Prairie Lumber Company, of Winnipeg. Mr. McGuirl will continue his planing mill business.

—It is stated that the Canadian Elevator Company will establish twenty lumber yards along the line of the Qu'Appelle, Long Lake & Regina Railroad in Manitoba.

—William Mitchell and his son Alexander, of Broadhagen, Ont., have gone to Alberta, where they will build and operate a saw mill in the interests of Senator McLean, of Ottawa.

—Irons & Winnacott, of Huntsville, Ont., have placed their order with McGregor, Gourlay & Company, of Galt, for a complete sash and door equipment. They recently added a resaw.

—The Moyie Lumber & Milling Company, Limited, with head office in Pheonix, Arizona, has been given permission to do business in British Columbia. The mill will be located at Moyie.

—John F. McRae, general superintendent of the Rat Portage Lumber Company, states that work will be commenced early in the spring on the new saw mill to be built by the company in Winnipeg.

—The Ladysmith Lumber Company has started a shingle mill at Ladysmith, B.C. It is equipped with Johnson shingle machines, manufactured by the Schaake Mahinery & Engineering Company, of New Westminster.

—Incorporation has been granted to Graham, Horne & Company, Limited, lumber merchants, Fort William, Ont. The capital is $100,000, and the provisional directors are G. A. Graham, J. C. Graham and J. T. Horne.

—C. B. Hume & Company, who have obtained a controlling interest in the Revelstoke Lumber Company, of Revelstoke, B.C., have made several improvements and built improved booms to prevent the loss of logs during the high water.

—N. & A. Dyment, of Thessalon, Ont., have purchased the steamer Norseman, of the Gilchrist-Fletcher fleet. The steamer has a capacity of 500,000 feet of lumber and will be used in the Georgian Bay trade.

—Incorporation has been granted to the Big Salmon River Improvement Company, for the purpose of constructing works on the Big Salmon River, in St. John, to facilitate the rafting of logs. John E. Moore, of St. John, is interested.

—An American syndicate is planning to establish a large woodworking and furniture factory on the Restigouche river, in New Brunswick, where there are large quantities of birch and maple timber. John Montgomery, solicitor, of Campbellton, N.B., is interested in the project.

—Victoria and Seattle parties have secured control of the saw mill of the Toronto and British Columbia Lumber Company at Sidney, B. C., and purpose operating the plant to its full capacity. The negotiations were brought to a successful issue by John Black & Company, of Victoria.

—Urquhart Bros., of Courtenay, B.C., have leased the Leamy & Kyle mill at Vancouver. This firm have a large mill at Courtenay which they will dismantle and remove the machinery to Vancouver. They will also add some new machines, to be obtained from the William Hamilton Manufacturing Company, of Peterboro.

—Preliminary arrangements have been completed for the construction of a large saw and shingle mill on False Creek, B.C. The promoter is W. T. Farrell, of Vancouver, who is also the owner of a shingle mill at Roche Point and of valuable timber limits. The new mill will be 50x100 feet and will comprise four shingle machines with a daily capacity of 40,000 shingles each.

—It is understood that work will be commenced within a month on the large saw mill to be erected on Deadman's Island, Vancouver, B. C., by Theodore Ludgate. The agreement provides that no Japanese or Chinese workmen shall be employed in the mill. The capacity will be probably 150,000 feet of lumber per day.

—The Mountain Lumber Manufacturers' Association held its annual meeting recently at Cranbrook, B. C. The election of officers resulted as follows:- President, A. Leitch; vice-president, J. W. Robinson; secretary-treasurer, W. F. Gurd; executive committee, F. C. Jones, Golden; J. C. Slater, Cranbrook; H. H. Bentley, Fernie; M. B. King, Cranbrook.

—The organization has been completed of the Newfoundland Lumber Company, composed chiefly of New York and Boston parties and capitalized at $1,000,000. The company have secured the properties of the Highland Lumber Company and the Parrsboro Lumber Company. A large saw mill is being erected at Norris Arm, and it is probable that large pulp mills will be built as well, there being a plentiful supply of spruce and adequate water power.

—The new saw mill at Arrowhead, B. C., together with extensive timber limits on Arrowhead Lake and the Columbia river, have been secured by Thomas Mereuith of Yorkton, N. W. T., W. W. Fraser, of Emerson, Man., A. McMillan, of Burnside, Man., and Mr. Taylor, of Arrowhead. The mill has a daily capacity of 30,000 feet. It is the intention of the new owners to build a new mill of large capacity and to market the output in Manitoba and the Territories.

—An organization has been formed in British Columbia called the Pacific Coast Shingle Weavers' Association. The object of the association is to keep ont the Chinese labor from the mills and thus to maintain a fair standard of wages. Several Chinamen are engaging in the shingle business. One named Chow is starting a mill to be operated by Chinese labor, and Sam Kee, a store-keeper of Chinatown, is negotiating for the purchase of a shingle mill already erected.

—The Crow's Nest Pass Lumber Company is equipping its new mill at Wardner, B. C. It will include a double-cutting band and circular mill, planing mill and dry kiln. The saw mill will have a capacity of 150,000 feet in ten hours. The company owns an immense body of timber, estimated at 600,000,000 feet and comprising yellow pine, tamarac, cedar and fir. Peter Lund, of Spokane, Wash., is managing director of the company, and H. C. Lindsay superintendent of the manufacturing department.

—The Red Deer Lumber Company has been organized with headquarters in Winnipeg and officers as follows: President, O. A. Robertson, St. Paul; secretary, F. B. Lynch, St. Paul; general superintendent, H. J. Box, Winnipeg. The company is capitalized at $500,000 and owns a large area of spruce timber limits on the Red Deer & Etoinami rivers in Saskatchewan, estimated to contain 200,000,000 feet of timber. A mill will be built on Red Deer Lake, on the new Prince Albert line of the Canadian Notthern Railway.

Emery Wheels, Corundum Wheels
and Grinding Machinery

All our wheels are first-class in every respect. All special shapes supplied without extra charge.

Are you using our **Improved Corundum Saw Grinding Wheels?** We guarantee them to cut faster and cooler than any other wheels on the market. Will not burn saws and are just what your **filer wants.**

Send **sample order** to be supplied on approval.

Canadian Corundum Wheel Co.
Hamilton, Canada

TRADE NOTES.

The American Blower Company, of Detroit, Mich., have issued a neat booklet, No. 145, entitled "The Heating and Ventilation of Manufacturing Establishments."

By an order-in-council the name of the Stuart-Arbuthnot Machinery Company, Limited, of Winnipeg, has been changed to the Stuart Machinery Company, Limited.

The Canada Corundum Company, of Hamilton, in their advertisement on page 15 of this number, call the attention of mill owners and operators to their saw grinding wheels. The special claim made for these wheels is that they cut without burning, a quality that the saw filer has long been looking for.

At a recent meeting of the directors of the Albion Iron Works, Victoria, B.C., Theodore H. Macdonald was appointed manager. Mr. Macdonald has had a wide experience as a mechanical engineer in the United States. It is probable that the plant of the company will be considerably enlarged.

Robert Bell, of the Seaforth Engine Works, Seaforth, Ont., recently closed a contract for 120 engines for delivery in the North-West Territories. The contract was made with a large American firm; it covers a period of three years and represents a consideration of over $160,000. It is probable that Mr. Bell will be compelled to increase his manufacturing facilities.

The Simpson Lumber Company, of South Bend, Washington, have ordered another No. 300 thermometer from the Helios-Upton Company, of Peabody, Mass. The latter company have also received a communication from the Northern Lumber Comany of Everet, Washington, stating that they are very much pleased with the thermometer supplied for registering the temperature in their dry kilns.

The Dyment Butterfield Company, of Barrie, Ont., have recently fitted up their works with patterns and equipment for the manufacture of a line of up-to-date saw, shingle, and lath mill machinery. Their works are conveniently located to supply the mills on the Georgian Bay and in Western Canada. Our readers are referred to their announcement in our advertisement pages and requested to communicate with them for particulars and prices of their machines.

Lumbermen should be interested in the advertisement in this issue referring to the Blickensderfer typewriter. The claims made for this machine are that it combines low cost with lightness, compactness and durability; that placing all the characters on one wheel insures perfect alignment; that the type are interchangeable and the writing always in plain sight; that by the means of an automatic tabulator, columns of figures can be printed as easily as ordinary words.

The Goderich Engine Company report that business is good. They are supplying the following machinery to lumber firms: Pigeon River Lumber Company, Port Arthur, one new compound engine, 16 in. and 28 in. x 22 in., for tug "Laura Grace"; Moulthrop Lumber Company, John's Island, one new engine 13 in. and 24 in. x 16 in. for tug "A Wright"; Geo. Chew & Son, Midland, new engine 10" and 20" x 14" and Scotch boiler for their new tug now building at Midland; Shuswap Shingle and Lumber Co., Sicamous, B.C., machinery for a new tug.

THE MILNER-PETROLEA WAGON COMPANY.

Among the important industries of Petrolea, Ont., is the wagon company of the above name. A walk through these works will convince anyone that they are up-to-date in every particular. The company have been fortunate in securing a location between the Grand Trunk Railway on the east and the Michigan Central and C. P. R. on the west and have sidings from each line into the works, thus giving them unequalled facilities for handling their raw material inward as well as for outward shipment of their wagons. The buildings are of brick, two stories high and built in the form of the letter "E," which makes them compact while furnishing a large floor space. The machinery has been selected with the greatest care, none but the latest and best design being put in. The arrangement throughout shows thorough knowledge of the best and most economical methods of working a plant of this kind. The company have their own electric lighting plant and steam heating system.

The superintendent of construction, Mr. William Milner, has had a very wide experience in the manufacture of wagons and has a staff of skilled workmen in each department. Material for every part is selected with the greatest care and no effort is spared in attaining excellency of workmanship throughout and finish. The company are working up to full capacity and state that they have large orders in hand. The attention of lumbermen is called to their advertisement in this number.

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. IX. TORONTO, CANADA, MARCH 4, 1903 No. 5

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING MONTREAL

22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—1 INCH, 1¼ INCH AND 1½ INCH Soft Cork Pine 1sts and 2nds, also deal ends. Apply Box 20, CANADA LUMBERMAN.

WANTED—150,000 FEET OF 1 IN. SOFT Elm, log run, mill culls out, any lengths and any widths; would buy it either green or dry. Quote f. o. b. nearest station. Address, H. BOURGOUIN, 71a St. James Street, Montreal, Quebec.

WANTED AT ONCE—SAWYER FOR MEDIUM Mill, must be temperate, steady, able to file and care for saws and do general repairing around mill when necessary. Give reference, experience and wages expected. W. B. MCLEAN & Co., Box 172, North Bay

Saginaw, Mich.

FOR SALE

The undermentioned machinery at our Canoe Lake Mills, Algonquin Park, Ont.

One 750 h. p. horizontal slide valve engine 32″ x48″ cylinder, with new Nordenburg automatic cut-off governor, 1 large rope sheave 14′ diam., grooved for 20 1¾″ ropes, weighs over 20 tons, the driven 7′ diam., includes tension carriages, track and rope complete, also one large tubular heater.
One 250 h. p. horizontal slide valve engine 18″ x36″ cylinder with new Nordenburg automatic cut off governor. 1 rope sheave 8′ diam., grooved for 18 1″ ropes, driven 40″, fly wheel 12′ diam., also 1 tubular heater.
One large double edger, 6 saws.
One 3-saw edger.
Two 2-saw trimmers.
One overhead 5-saw slash table.
One Lath Mill, Bolter and Equalizer.
One Twin Circular Saw Rig with 6 saws, Prescott steam feed cylinder 7″ diam.,38′ 6″ long,with carriage and set works complete, shafting from 2″ up to 8″ diam.,including boxes, couplings, and pulleys from 6″ diam. up to 9′x27″ face. Mitre and bevel gearing, wood and iron, paper and iron frictions, mitre, bevel and straight face frictions, sawdust and slab carrier, all sizes.
One large burner 35′ diam.,80′ high,with spark arrester, balcony and ladder, including grate and bearing bars complete.
One Double Combination Safe, outside and in, 32″x68″x51″.

GILMOUR & CO.,
Trenton, Ont.

WANTED AT ONCE—A quantity of Telegraph Poles. Address Box 108, CANADA LUMBERMAN.

FOR SALE CHEAP TO CLOSE AN ESTATE: planing mill, house, barn and office; always done good business; good point for retail lumber yard; good farming community; sell with or without the house. Apply to Estate of HUGH STEWART, Hagersville, Ontario.

WANTED.

I CAN USE ALL KINDS OF LUMBER, Shingles, Ties, Poles, Etc., I can place large or small tracts of timber and mining properties, etc. Your lowest price and terms with description solicited. Call on or address CHAS. S. WAKEFENCE, Wholesale Lumber, Etc., Watertown, N. Y.

FOR SALE

The undermentioned machinery can be seen at our Trenton Mills.

Four tubular boilers 40″ diam., 12′ long, 22-3″ tubes, full fronts, stop and safety valve.
Three tubular boilers 40″ diam., 15′ long, 38-3″ tubes, fronts and grate bars.
One 10″x15″ horizontal engine.
One 5″x6″ vertical engine.
One steam pump 8″x4″x9″.
One double plunger pulley pump.
One single plunger pulley pump.
One tie machine with 2 inserted teeth saws, never was used.
One 2 saw trimmer for trimming ties, never was used.
One steam cut-off circular saw rig.
One 10 block shingle machine (Challener & Sons,) only used two seasons.
One shingle saw grinding machine (Challener & Sons,) only used two seasons.
One shingle bolter and sapper, only used two seasons.
One large double surface planer 26″x6″.
One roller feed rip circular saw machine.
Four band saw carriage axles, vee and straight face wheels with Prescott offset.
One heading machine, can be either used for box lumber or for cutting barrel heading out of slabs.
One band re-sawing machine, nearly new; "Mershon Build"; bevel mitre and spur gearing, iron pulleys, various sizes; paper and iron mitre frictions; also a lot of rope sheaves, various sizes.
Six search-light dynamos, manufactured by the C. G. E. Light Co., Peterboro, 8,000 C. P., 50 volts.
Six iron poles and all wire connections.
Five reflectors.
Five vamps.
Five ammeters.
Five tighteners.
One 36″ horizontal turbine water wheel, "Ross Pattern"; wrought iron case 7′ diam. x 6′ long; cast iron heads; draft tube 9′ long; steel girder frame, also governor; the above water wheel only ran a few months under 54′ head and is nearly as good as new.
One portable circular saw rig, can cut 30′ long, including 2 43″ saws.
One portable engine and boiler 20 h. p., 8″x14″ cylinder, boiler 10′ long, shell 3′ diam., fire box 4′ 4″ x 2′ 6″—33 2″ tubes.
One pair dredge engines with drums, gears and housings on cast iron frame bed plate, cylinders 8″ x 14″.
One loco' fire box boiler for above; shell 42″ x 12′, with 51 brass ferruled steel tubes 2½″.
One travelling crane and tracks, with boom 35′ long.
One large waggon "Buffalo Make".
One heavy bob-sleigh with pole and neckyoke; a large quantity of chains, various sizes, also ¾″ and ⅞″ steel wire cable.
One upright boiler.
One fire box boiler 45, 2″ and 2½″ tubes; fire box 3′ x 2½′ x 6′ on skids.
One horizontal engine 6″ x 12″ cylinder.
Two platform cars.
Five wheel road scrapers.
Six dump carts.
One 16″ x 24″ locomotive engine and tender complete in good running order.
One steam hammer, 1000 lbs., in good running order.

GILMOUR & CO.,
Trenton, Ont.

WILL REQUIRE ON THE OPENING OF Navigation Hemlock, Spruce and Pine Lumber, 1", 2" and 3", by the cargo. Address VIGARS & Co., Port Arthur, Ont.

WANTED.

QUANTITY OF 10 x 10 RED OR WHITE Pine, and White Oak 4x8 and 8x8, 10 feet long. A. BRYCE, 2 Toronto Street, Toronto.

FOR SALE.

THE FOLLOWING PROPERTY, CONSISTing of 38 square miles, well timbered, saw mill, pulp mill, 25 tons daily, and Electric plant, netting an annual revenue of over $6,000. Good reasons for selling. For particulars address AUGER & SON, Quebec, Canada.

FOR SALE

15,000,000 feet White Pine Lumber. 5,000,000 White Pine Lath.
A large portion of same is Cork Pine.
About 5,000,000 feet lumber already sawn and on sticks.
About 500,000 Laths already manufactured.
Mill now running. Location Sault Ste. Marie, Ontario.
22 feet water at loading dock.
For full information apply to the
INTERNATIONAL LUMBER CO., Limited.
Sault Ste. Marie, Ontario, Canada.

FOR SALE

Large Tract of Timber
In Central Ontario
THE PROPERTY OF
The Canadian Land and Immigration Company of Haliburton, (Limited.)

This company has a large tract of well timbered land about 125 miles north-east of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherrybirch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads, one of which is about to be extended through the centre of the property. The Company are prepared to sell this timber in blocks ranging from 5,000 to 10,000 acres, or more if desired.
There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.
Maps and plans and further particulars can be had by applying to
W. H. LOCKHART GORDON, Managing Director, 157 Bay Street, Toronto.

CURRENT TRADE CONDITIONS.

ONTARIO.

The lumber business of the past week has shown evidence of buying for the spring trade. Retail dealers have placed orders with the object of building up their stocks to a point which they consider will meet the heavy demand which is confidently looked for. In Toronto business was more active during February than in the corresponding month last year, all grades of pine and hardwoods being called for to some extent. Should there be an early spring still higher prices for lumber are looked for, as the building requirement will be large and the new cut of lumber will not be ready before June. By some an early advance in the price of shingles is predicted.

The weather of late has been favorable for logging operations, and a large in-put of logs is the result. There is no fear, however, as to a surplus of lumber, as American firms have recently bought very heavily. It is estimated that over 50 per cent. of the Georgian Bay production will find a market in Michigan and Ohio.

QUEBEC AND NEW BRUNSWICK.

Transactions in spruce lumber nave been quite heavy of late, and a large percentage of the production of deals has been contracted for. It is understood that the Charlemagne company have placed their first quality deals with a Liverpool firm at about ten shillings advance over the prices which ruled in 1902. Heavy transactions in waney and square timber have also taken place at enhanced values. The production of the Maritime Provinces has not sold so well, and some of the best cuts are still on the market. Manufacturers refuse to reduce their asking prices, however, which they claim are warranted by the cost of production. New Brunswick cedar shingles are still somewhat unsettled, although investigations go to show that prices are likely to be higher in the near future. Sales are being made around $3.40 for extras on Boston rate of freight.

MANITOBA AND BRITISH COLUMBIA.

Indications point to a very active demand for lumber this year throughout Western Canada. The building season is opening early, and Winnipeg architects have plans under way for a large number of buildings both in the city and at provincial points. It is already questioned whether the supply of lumber will meet the demand, and for this reason higher prices seem probable. In British Columbia the removal of the United States duty on shingles is being discussed, but in our opinion such an action is not likely to be taken. The saw and shingle mills of the Coast are busy, with large orders booked in advance.

UNITED STATES.

The past week has witnessed more activity in the buying of lumber than has any previous week this year. Dealers have apparently become convinced that there is a shortage in the supply of lumber and that prices are not likely to recede. In the Duluth district there is a scarcity of many sizes of piece stuff, for which manufacturers are now asking $15 at the mill, whereas one year ago the price was $13.50. In Chicago there is a scarcity of 6-inch strips and 12-inch No. 1 boards, while the buying for box concerns has reduced the supply of No. 4 and 5 boards to a low point. Hemlock has recently come into much prominence by showing more strength in comparison than any other class of lumber. Cargo lots delivered at Chicago bring $12.50, the average price on the mill dock being about $11. Hardwoods continue to improve, the buying of the lower grades being a feature of late transactions. Maple is stronger and has advanced about one dollar. Manufacturers' quotations are $20, $12 and $8 for firsts and seconds, common aud cull respectively f.o.b. shipping point. The approach of spring has brought about more activity in shingles, with prospects of slightly higher prices.

GREAT BRITAIN.

Considering the nearness of the importing season, it must be said that much indifference is shown on the part of British importers in respect to placing contracts for their supply of lumber. The opinion is gaining ground, however, that the import of the coming season will be very moderate, and consequently more activity in closing negotiations may be expected in the near future. The position of Canadian pine and spruce is extremely firm. The Timber News reports a transaction at £34 per standard c.i.f. Glasgow for first quality broad pine deals, and £31 is asked for 11x3. For third quality pine £13 per standard for the usual specifications is being asked by shippers. Pine boards in shipping cull qualities have been disposed of at £11 to £11 10s. Red pine deals are in good demand, especially four inch thick, at about 10 shillings advance on the best figures of last year.

Shippers are asking £9 5s for 3 x 9 spruce and £8 10s for fourths, while for 7 and 8 inch of unsorted quality the asking quotation is £8. There appears to be a fair stock of fourth quality and cull spruce, and any advance that may take place this season will probably be confined to the higher grades. At a recent auction sale 3x9 third quality spruce brought £9 15s and fourth quality £9. These prices, it will be observed, are only 10 shillings higher than the quotations of shippers, and do not leave a reasonable margin of profit for the importer. First quality red pine at the same sale brought £15 15s for 1x9 to 14 inches, which is considered comparatively cheap.

The appreciation in square and waney timber continues. Prices have now reached 3s 6d to 3s 7d for first class 18 inch and 3s for second class 18 inch waney pine c.i.f. Liverpool. Oak is held at 3s 4d to 3s 5d and rock elm at 3s 1d to 3s 2d c.i.f. These prices are probably the highest ever known.

STOCKS AND PRICES.

David Lynch, of St. John, N.B., is in the market for 400 spruce futticks and crooks, 10 to 12 feet long and sided up to 11 and 12 inches.

Cameron & Company, of Ottawa, last week purchased 200,000 feet of hardwood lumber from the Estate of E. N. Hurtubise & Company, Aylwin, Que.

The contract for piles for the Ogilvie mill at Fort William, Ont., has been awarded to the Lake Superior Timber Company. The contract calls for 4,000 piles to be delivered in the spring.

J. & T. Conlon, of Thorold, Ont., have been given contracts for all the logs which they can saw this season by there two mills at Little Current. It may be found necessary to operate the miles day and night part of the season.

In Chicago last week a sale was made of 500 lard tierces at $1.15. In slack stock No. 1, 30-inch elm staves are quoted at from $8 to $8.50 and flour staves about $8. There is said to be a small margin between the raw material for cooperage purposes and the finished product.

The Dominion Government is asking for tenders up to March 25th for a license to cut timber on Berth Nos. 11, 12, 14, 15, 16 and 18, situate in the province of Manitoba, along the shore of Lake Winnipegosis. The limits comprise a total of 225 square miles and were formerly owned by thelate P. Kelly. The Government also desires tenders by March 18th for a license to cut timber on Berths No. 332 and 333 in province of British Columbia, the former containing 640 acres and the latter 23 square miles.

Four timber berths were sold at the Crown Dands office, Fredericton, N.B., on February 25th, as follows: Three square miles, south of Clifton Station, Caraquet River, to P. G. Mahoney, at $115 per square mile; four square miles on Portage River, Kent county, to R. O'Leary, at the upset price of $8; eight square miles on Polley's and Murphey's Creek, Kouchibougnac, and 10 square miles on Black River and Murphy's Creek, to R. O'Leary, at the upset price of $8 per mile.

Under date of February 14th, Messrs. Clairmonte, Man & Company say of the Barbadoes market: The arrivals with lumber during the fortnight have been small, and our yards are barely supplied. During our crop season, just commenced, there is always a good demand. Last sales for local use are as follows—White pine at $26. per M for first quality and $21 for second quality; spruce, $23.00 per M for first and $20 for second quality.—Cargo is to arrive from Bear River. Shingles—Gaspe long cedar, last sale at $5.04 to $4.89 per M; Cedar laying, last sale $1.82; Spruce Laying, worth $1.65 to $1.70. Cypress, sawn saps $3.80 for 6-inch, $3.50 for 5-inch, and $3.20 for 4-inch.

BIRCH SQUARES AND SEATS.

A large buyer of Birch chair seats and of Birch squares is open to contract with a mill for their output. Also open for Broom Handles and Dowels in large quantities. Write in first instance to "Finance," care of CANADA LUMBERMAN.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN).

Reports received from the lumber limits this week give every assurance of a late spring. Should this be a reality, log and timber hauling will not be interfered with. From the Kippewa Country, which is the banner scene of operations this year, comes reports of fear of further snow falls even at this advanced stage of winter. While there has been an abundance of the "fleecy" it has been light, and hence has not impeded operations. More snow, however, will certainly have this effect.

It looks as if the British bound square and waney timber will "reach its destination" much sooner this year than last. It is nearly all being taken out in the Kippewa district, and arrangement have

been made whereby it will be handled over the branch line of the C. P. Railway from Gordon Creek. At Papineauville, on the Ottawa river midway between Ottawa and Montreal, the bulk of the timber will be placed in the river and rafted for movement to Quebec City. By this rail and river arrangement the tedious all river trip from the limits to the seaport will be cut down considerably both as regards time and distance. The timber should reach the British market weeks if not months before the time of arrival of former years. This will be very desirable to both buyer and seller. The sooner the timber reaches Quebec the sooner the manufacturer gets his money. By the adoption of the rail route the timber will be saved the battering which was experienced in previous seasons in the all river route, a battering which meant a deterioration in value. Mr. Wm. Wade of Grenville, Que., a man of many years experience, will have charge of the rafting of the timber from Papineauville to Quebec.

Every stick of square and waney timber manufactured in the season of 1902-1903 has been sold at an advance ranging from ten per cent. in September to twenty per cent. later on.

Talk about advances in the value of lumber. A lot of good white pine logs were sold in Ottawa this week and the price was a dollar more per M., log measure, than the lumber in the logs would have brought three years ago after being sawn, seasoned and selected. However, when it comes to a matter of advances lath heads the list. In the last four years it has more than doubled in value, showing an increase of over 100 per cent. Four years ago No. 1 white pine lath begged buyers at 95 cents and $1.00 per M, whereas present quotations for the same stock—where it can be had, are $2.50 to $2.75 and even higher.

While the estimate on the portion of the mill cut of 1903 already out of first hands is placed at 50 per cent. it must be remembered that this applies to quantity only. When it comes down to a question of value fully seventy-five per cent. represents the part sold. This is accounted for by the fact that the demand for the high grade timber is, and has been, much better than for the medium and low grades, and hence has sold easier.

The 1903 output of the Ottawa district mills will, providing the movement of logs during the summer continues free, reach fully 36,000,000 feet, an increase of ten million on the figures for 1902. Every available log will be cut, for the high price of sawn lumber is a great incentive to mill activity.

The movement of lumber from Ottawa district yards to American points is quite active at present, but car scarcity is complained of. A local man who made a state trip through New York last week reports many inquiries for Canadian lumber. If the railway companies were in a position to move the lumber freely the activity would be even more pronounced than it is.

A local lumberman who returned this week from the Sault Ste Marie district states that the lumber activity thereabouts is unprecedented. Hardwood limits which went a begging a few years ago at $3 to $5 an acre are now selling at figures rang-

ing from $25 to $50 per acre. The increase in popularity of hardwoods for furniture, flooring and office fittings has given an impetus to the demand which in some sections is hard to fill.

The Ottawa lumber firms are already arranging for the movement of supplies for next year's camps. In previous years this was left to a large measure in the hands of the jobbers, but this year more than one firm, through with logmaking, has placed parties of men at work moving in supplies to the "stopover" stations, the idea being to take advantage of the river roads and sleighing.

Despite the fact that record wages were paid this year or rather as a natural result of this, the firms have had continuous trouble with their new men, who are either changing or throwing up jobs almost daily even at this late stage. The great drawback to work on the limits this season in fact, was the scarcity of high class labor, a problem that money failed to solve.

The Shepard & Morse Company have made extensive improvements to the Mason mill in the west end of the city. It is now one of the most up-to-date mills in the district. New edgers and setters have been installed, and one of the band saws has been changed to a double cutter. This mill will have a large output this year.

Work is progressing satisfactorily on Fraser & Company's new mill at Deschenes near Ottawa, and it is now expected it will be sawing lumber by Dominion Day.

Speaking about new mills it may be remarked that the first of the machinery for the new Booth mill at the Chaudiere is expected to arrive in Ottawa in a week or so. Until the heavier parts are installed work will not be proceeded with on the superstructure. The latter will probably be built of brick, although stone is spoken of.

OTTAWA, March 3rd, 1902.

TRENTON, CANADA

THE BOSTON MARKET.

Spruce lumber is in moderate supply at Boston, with some of the mills about completing the season's run. Prices are steady, with an improved tone to the market: Ten and 12-inch dimensions, $21; 9-inch and under, $18.50 to $19; 10 and 12-inch random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50; 5-inch and up, merchantable boards, $17; matched boards, $18 to $20; out spruce boards, $13 to $14; bundle furring, $17.

Pennsylvania hemlock is quoted 50c. higher; eastern is unchanged: Boards, 12, 14 and 16 feet stock, $14.50 to $15 for good eastern; Pennsylvania, No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Hardwood lumber is generally firmer, with quartered oak and whitewood, advanced in price: Quartered oak, $75 to $83; plain oak, $45 to $47; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $51 to $57; sap and common, $38 to $45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end-dried white maple, $46; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

There is a steady market for shingles: Extra cedar at $3.35 to $3.45; clear, $2.85 to $2.95; second clear, $2.30 to $2.40; extra No. 1, $1.75 to $1.80; British Columbia red cedar, 16-inch, five butts to 2 inches, $3.50 to $3.60; 18-inch, five butts to 2 inches, $4.25; five butts to 2¼ inches, $4.50.

There is a firm market for spruce clapboards, with both offerings and demand light: Extra, $42; clear, $40; second clear, $37 to $39; extra No. 1, $30 to $33.

Laths are quiet: One and five-eighths inch, $3.15 to $3.25; 1½-inch, $3.00 to $3.10.

Charles E. Beckman and C. A. Chisholm are about to build a saw and shingle mill at Vancouver, B. C.

Lucas, Steele & Bristol, - Hamilton, Ontario.

PERSONAL.

Mr. Robert Cox, lumber merchant, of Liverpool, Eng., arrived in Ottawa on a visit a fortnight ago.

Mr. William Sawyers, a lumber and shingle dealer at Mansfield, Ont., died recently in that village.

The late George J. Cook, president of the Cook & Bros. Lumber Company, Toronto, left an estate valued at $789,300.

Mr. J.G. Colmer, C.M.G., for twenty years secretary to the High Commissioner for Canada at London, Eng., has tendered his resignation.

Mr. F. B. Maxwell, of Morrisburg, Ont., died recently after a somewhat prolonged illness. He was seventy-five years of age and for many years was superintendent for the Cook & Bros. Lumber Company, of Toronto.

Mr. W. J. Sheppard, of Waubaushene, Ont., spent some time recently, on the Pacific coast. In association with Mr. J. G. Scott and others comprising the Pacific Coast Lumber Company, he is building a mammoth saw mill at Vancouver.

The death took place recently of Mr. Duncan Fisher, of Paisley, Ont., who was well known in the Bruce peninsula as a large owner of timber. He was born in Osgoode, Carlton County, and first became a citizen of Paisley in 1869.

PUBLICATIONS.

"Queen's Quarterly" for January contains an interesting article by Mr. A. P. Knight on "Sawdust and Fish Life."

A neat celluloid pocket calendar has been received from the International Lumber Company, of Sault Ste Marie, Ont.

We are in receipt of a copy of the seventeenth annual report of the Port Arthur Board of Trade, bearing the compliments of Mr. R. Vigars.

The R. Laidlaw Lumber Company, of Toronto, Sarnia and Buffalo, have favored us with a neat calendar and a useful memorandum book.

Mr. J. F. Stengel, wholesale dealer in pine and hardwood lumber, Buffalo, has favored his friends with an attractive calendar. A sturdy lad is shown holding a rifle, the title being "Hunting for Business".

"Economics of Forestry" is the title of a book of 520 pages, written by Professor B. E. Fernow, Director of the New York State College of Forestry, and published by Thomas Y. Crowell & Company, 426 West Broadway, New York. It treats of forests and forestry from the standpoint of political economy, and brings together with professional completeness and accuracy all that a student of economics would like to know. The author's name alone stamps the work as second to none.

WOOD PULP DEPARTMENT

THE SCANDANAVIAN PULP MARKET.

In view of the competition which Canadian pulp manufacturers meet in Great Britain the following review of the Scandinavian market, taken from the World's Paper Trade Review, will be of interest :

The wood pulp market during the last few weeks invites little comment. The unusual water scarcity, discovered not so very long ago, has brought a stop to business at unremunerative prices. Sellers are awakening to the fact that for prompt shipment pulp is becoming scarce, and that by holding out there is every possibility of obtaining a good price a little later on.

The hard frost has lately increased the water scarcity, as the water in the rivers simply freezes away. At this present moment I think that about one-third of the normal quantity of pulp is being produced by the Norwegian mills, and, according to the reports from Sweden, it seems, if not equally bad there, that there is less water than usual.

It is believed that most of the mills are certain to find that it does not pay them to keep going, and they will then stand idle till the end of April.

The water scarcity over here has created an extra demand from some of the Norwegian paper mills, otherwise making their own pulp. At least one of them has bought a rather large quantity, at prices from Kr. 32 to Kr. 33 f.o.b., and may want more.

The offers from the Continent and Great Britain have an upward tendency. With the firm American market for pulp and paper, and the lessened output both in Scandinavia and Germany, this is only natural, and more so as the threatening prospects of a crisis in United States this time have passed over.

The autumn speculations, however, are apt to make themselves felt just in such a position of the market as now. Buyers holding contracts over 1903 with speculators feel certain, or at least have a strong hope, that the speculators will be able to fulfill them, and the demand, which would otherwise exist, is on account of this not there to keep up prices.

Conversing with a large pulp exporter here recently, he told me that he would not sell under Kr. 35 for pulp over the year, but although enquiries now are plentiful, and prospects for the immediate future good, I am afraid that it will be difficult to obtain this figure for deliveries over the year. This will to a certain degree also depend upon the stocks abroad. As far as I can learn, the stocks on the Continent are of normal size, or if anything below, while in Great Britain most of the paper mills have plenty to handle before they are obliged to make fresh contracts. There may, however, be some mills in the United Kingdom which are at present short of pulp.

The development of the market is eagerly watched over here, and at present no contracts for prompt shipment can be made under Kr. 34-35 f.o.b. This present position will, I think, continue without alteration for some time to come, as stocks now are small and production almost nil. Sellers can, therefore, afford to wait.

CANADIAN EXPORTS OF PULP WOOD AND PULP.

Official returns made public by the Canadian Government show that there has been a marked increase in the export of pulp wood to the United States. During the last six months of 1902 American mills received $944,012 worth of pulp wood, as against $576,276 worth in the last half of 1901, an increase in 1902 of $367,736 worth.

A similar increase is shown in the exports of wood pulp from Canada to the United States. During the last half of 1902 the shipments across the border reached the aggregate value of $827,985, while in the same period of 1901 the shipments of wood pulp reached a total value of $480,246, an increase in favor of the last half of 1902 of $347,738.

The percentage of increase in the exports of wood pulp for the last half of 1902 over the corresponding period in 1901 was over 61. In wood pulp the comparison of these periods shows that the per centage of increase for the last six months of 1902 was over 70. The fact that the American mills have made such largely increased demands on the Canadian pulp wood and wood pulp is significant, coming as it does so soon after the Canadian manufacturers made the demand on the Federal Government for the imposition of an export tax.

During the last six months of 1902 Canada sent to Great Britain $610,046 worth of wood pulp, as against $452,434 worth sent during the last six months of 1901. The increase in favor of the 1902 half year is $157,612, or 32 per cent.

THE NEPIGON PULP AND PAPER COMPANY.

The above company obtained a timber concession in the vicinity of Nepigon River and Nepigon Lake, in the district of Thunder Bay, in 1900. It was the intention to have dammed the Nepigon River at the foot of Lake Ellen, and to have erected pulp mills at Nepigon. Owing to difficulty with the Canadian Pacific Railway the company was foiled in its plans. It has since obtained a renewal of the concession and an amendment to the charter, giving it the power at Cameron Falls, some twelve miles up from Nepigon. Active operations were commenced in July of last year. A number of substantial buildings have been erected and considerable work has been done on the water power. The local conditions for the development of the water power are very favorable, the stream affording thirty thousand horse power.

The capital for the carrying on of the work has for the most part been secured. All plans and drawings for the development of the water power have been drawn and are complete and ready for construction. A road has been constructed from the Canadian Pacific Railway to the works, and a large amount of supplies and material, including three thousand barrels of cement, will be taken in this winter to facilitate the progress of the work next summer. The company have also given a contract for cutting one and a half million feet of lumber and timber to be used in construction. The expenditure to date in round figures is $50,000. Next season's estimated expenditure in the line of construction is $300,000.

PULP NOTES.

The annual meeting of the Sissiboo Pulp & Paper Company will be held in Montreal on March 25th.

It is understood that the pulp mill of the Jonquieres Pulp Company, Jonquieres, Que., will be entirely remodelled.

It is reported that Price Bros. & Company will build a pulp mill at Ha-Ha Bay and another on the Aux Sables river, where a 250-foot head will be developed.

The Imperial Paper Mills Company of Canada has been incorporated, with a capital of $3,000,000. It is proposed to take over the business of the Sturgeon Falls Pulp Company at Sturgeon Falls, Ont.

C. B. Campbell has interested capitalists in the erection of a pulp mill at Dryden, Ont., and it is understood that the preliminary work will be commenced early in April.

It is reported that E. Steadman, late manager of the Sissiboo Pulp Company, is to succeed Joseph Hughes as manager of the Acadia Pulp & Paper Company at New Germany, N. S.

The first mechanical wood pulp factory in Austria was erected in 1866 by Moritz Markl, whose death (in his 79th year) is just announced. He was a partner in the paper making firm of Markl Bros., Rabenstein, Lower Austria.

The annual general meeting of the Peribonca Pulp Company was held in Quebec recently, when a satisfactory report was read, followed by the election of officers. Hon. A. Robitaille, provincial secretary, was elected president, and N. Bernatches vice-president.

The Chatham World says that the New Brunswick Government is destroying all hope of the pulp mill at Chatham resuming operations by withdrawing the Crown land leases and giving permits to operators to work on the lands which the pulp company assigned to its creditors.

It is rumored that the Rainy River Pulp & Paper Company will proceed at once to build a pulp mill on the Sand Island river, near Mine Centre, Ont. It is further stated that the contract for electric plant has been awarded to the Westinghouse Electric & Manufacturing Company, of Pittsburg.

B. W. Burleigh and W. N. Weeks, extensive dealers in pulp wood of Whitehall, N. Y., were recently in Quebec. Mr. Burleigh stated that he expected to export at least 50,000 cords of pulpwood for his firm during the coming season of navigation, and another 50,000 cords for the International Paper Company.

The United Lumber Company, of Halifax, operating extensively in Nova Scotia, have decided to build a large pulp mill on the Clyde River, in Shelburne county. Engineers who have investigated the water power report that 3,000 horse power is available. It is probable that operations will be commenced next summer.

An announcement from Wallace, Jaastad & Drewsen, New York, reminds us that they are splendidly equipped for designing pulp mills, electric lighting and power stations, manufacturing plants, etc. Mr. Wallace has planned over 75 manufacturing plants and hydraulic developments; Mr. Jaastad has designed upwards of 50 steam and electrical installations and paper and pulp mills, while Mr. Drewsen is a recognized authority on chemical processes of manufacture.

Of the British pulp market an exchange says: Prices of mechanical are decidedly going up, and still higher values are anticipated. The scarcity of water in Scandinavia is more acute than is generally realized, and the out-turn of the majority of the mechanical pulp mills has dwindled considerably. Although there are still some cheap lots of chemical low grade pulp offering, the prices for the better qualities are distinctly firmer. Trade, however, is exceedingly dull, and there is very little demand at present.

The Lake Superior Timber Company, of Port Arthur, Ont., has contracted to deliver seventy cargoes of pulp wood to Port Huron, Detroit and Cleveland the coming season of navigation. The manager, Mr. Bishop, says: "We have sold for this year's delivery between 20,000 and 25,000 cords of pulp wood, and we could sell much more if we could secure the men to get it out. Labor is scarce, however, and we have to do the best we can. The shipments of pulp wood by the company will be from the Nepigon Straits, and the first cargo will be loaded about June 1."

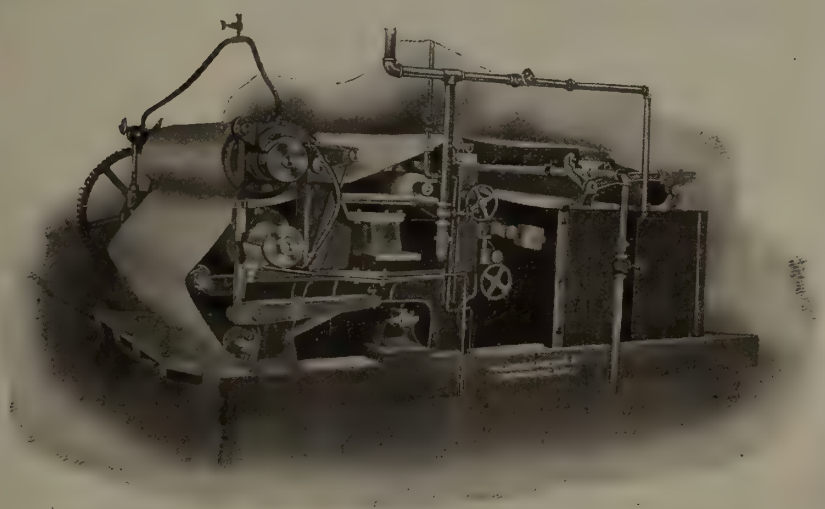
Improved Wet Machine Pattern
With Hydraulically Loaded Press Rolls.

In this type of machine even pressure on felt is secured by means of hydraulic pressure cylinders on each side of machine, acting through their pistons on compound levers, which increase pressure on rolls to 1000 times that on pistons

Pressure varied at will by operator.



We also build an improved pattern Wet Machine identical with this type save that the rolls are spring loaded, instead of hydraulically loaded.

This type has given good satisfaction, and we have installed it in many mills.

Our new 1903 Catalogue of Pulp Mill Machinery, Catalogue E, is now in preparation, and by applying now, you will be sure of a copy when issued.

Plain Tales from the Hills

(NOT BY KIPLING)

Here is a machine. It is called a Hill Steam Nigger. With it you can increase the cut of your mill three to five thousand feet per day. It can also make the two or three men now ornamenting your log deck superfluous luxuries. Now, stop and figure out how much more money you will be worth in a year if you can increase your cut and decrease your pay roll as we have said, then you'll order a Nigger.

INMAN POULSEN & Co.
Oregon Pine Lumber.
Annual Output 75 million feet.

PORTLAND, OREGON, January 8th, 1903.

ZIMMERMAN - WELLS MACHINERY Co.,
Portland, Oregon.

GENTLEMEN, In reference to your inquiry regarding the workings of the Ray Patent Steam Feed purchased from you about eighteen months ago, we have this to say regarding the feed, that it certainly is not only the best feed that we have ever used, but undoubtedly has no equal to-day on the Pacific Coast.

We have dropped as high as twelve 24-ft. 1" boards in one minute. In doing this, the carriage would have to travel about 650 feet and stop and start twenty-four times in one minute. The weight of the carriage, head blocks and log would be about ten tons. This would give you a pretty good idea of the Power exerted by the feed in handling a load of that size at such a velocity.

We have run this feed night and day since we have had it, continually, and the same ropes are still in service that were put on when the feed was mounted. Everything about the feed seems to be in as good condition to-day as the day we got it. We would not take it out and put back our old feed for ten times the cost of the new one You will see that we are more than pleased with it.

Yours truly,
INMAN POULSEN & Co

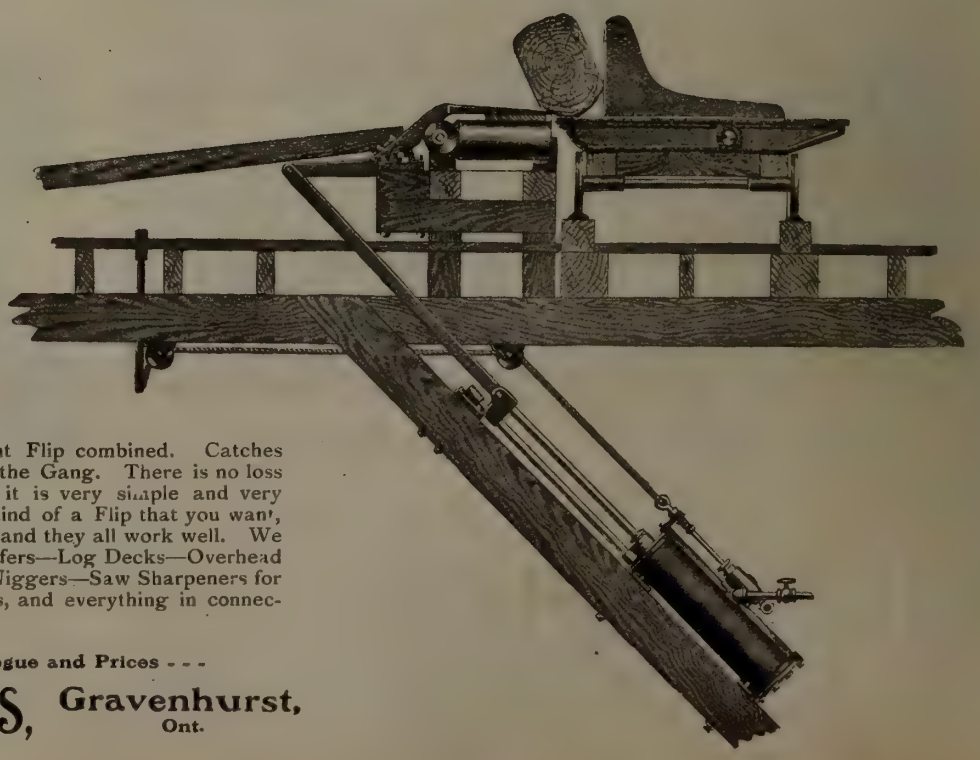
Combined



Our Board Catcher and Cant Flip combined. Catches Boards and throws the Cant to the Gang. There is no loss of time, it is a fine thing and it is very simple and very durable. We can build any kind of a Flip that you want, they all have cross head guides and they all work well. We also make Steam Edger Transfers—Log Decks—Overhead Friction Log Turners—Steam Niggers—Saw Sharpeners for all kinds of Saws, Saw Grinders, and everything in connection with a Saw or Shingle Mill.

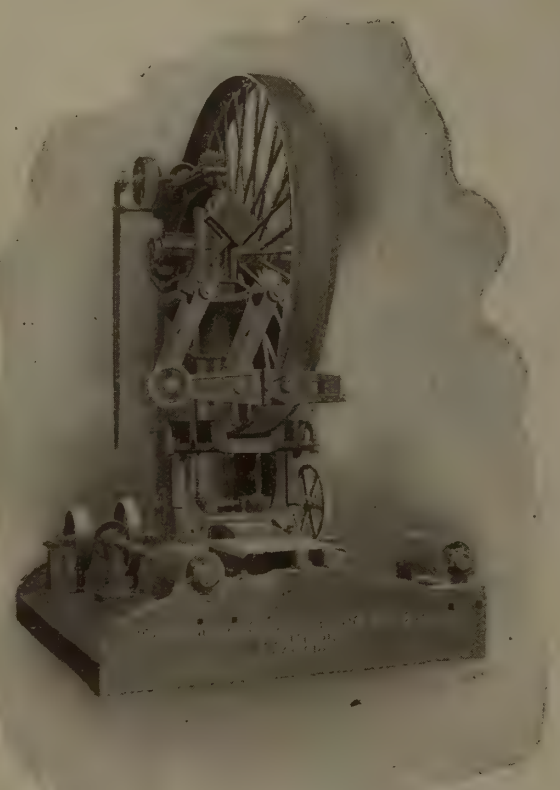
From Present Appearances

the Log Cut this Year will be Larger than in 1902

Some Lumbermen State

it will cost 15% more to manufacture their lumber this year than last year, including extra cost of cutting and delivering logs in mill.



What Are You Doing to Economize in Manufacture

to offset this 15 per cent. extra cost? If you are still running the old time Circular Saw a change to a Band Mill with its 14 gauge saw will give you 10 to 15% more lumber out of the same logs.

Thus Saving You in One Year

the entire cost of the change and the extra cost of this year's saw bill.

If You are Running one of our Band Mills Now

you can save this year's extra cost of manufacture by making your band over to a double cutting mill, using our special devices for this purpose.

You Will Increase the Output of Your Band Mill

at least 10,000 feet per day at no extra cost for labor, except the wages of one tail sawyer at log deck.

This Will Help You Out on This Year's Extra Large Log Cut and Save at Least All This Year's Extra Cost of Manutacturing.

The Change is not Expensive.

With Our Patent Devices the Lumber is Cut Perfectly True and the Boards Dropped on either side are exactly the Same Thickness.

No More Trouble to Keep Up Saws or to Run Mill than a Single Cutter.

No Difficulty is Experienced in Cutting Defective Timber to the Best Advantage with a Double Cutting Saw.

Changing the Single Cutting Band Mill inexpensively to a Double Cutter is one of the Most Progressive Changes in Lumber Making that has occurred for many years.

We shall be pleased to correspond with you on this subject, or in regard to any contemplated changes in your Mill.

WATEROUS, BRANTFORD, CANADA

McEachren Heating & Ventilating Co.

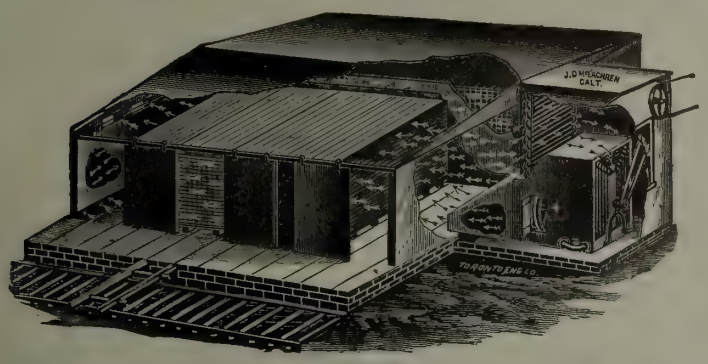
Our Dry Kiln Installations are all giving the best of satisfaction. We make both a natural draft kiln and a blower kiln. Our Steel Trucks and Transfer Cars are worth examining ; they are cheap yet strong and durable.



Durability

Efficiency

Simplicity

Economy

THE "A B C" DRY KILNS

Simplicity and Economy of Operation.
Perfection of Product.

The Fred Macey Company, Grand Rapids, Mich., write :

"We have had ample opportunity to test the six 'Moist Air' Dry Kilns which you installed in our plant, and we find them to be entirely satisfactory. Our superintendent reports that they require very little attention, are economical and easily regulated, and the lumber comes out of the kiln in perfert condition to make high grade goods. We might add that our superintendent has had at least thirty years' experience in kilning lumber and he says these are the best he has had the pleasure of operating."

R. H. SMITH CO., LIMITED

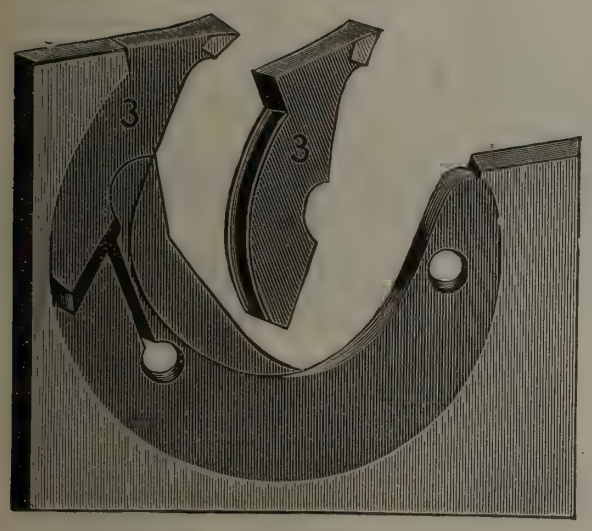
St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simond's Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

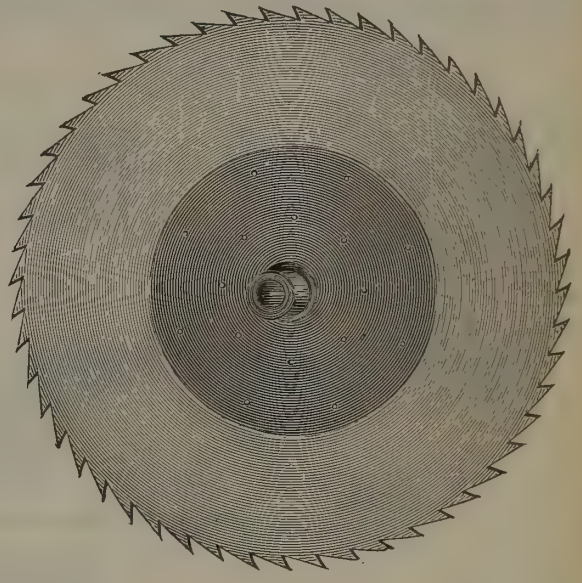
Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

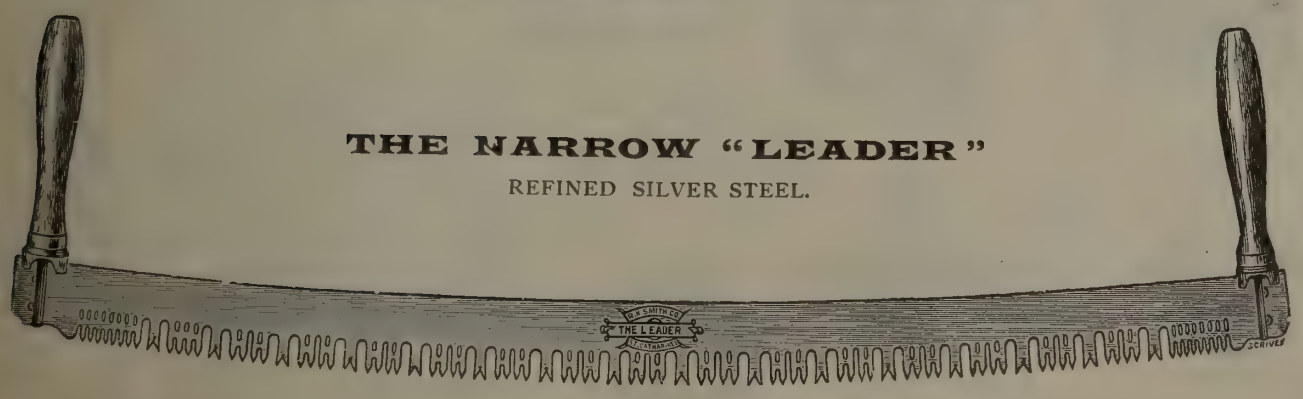
SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.



CROSS-CUT SAWS



The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Write for prices.

Perfectly Balanced

The Dodge Wood Split Pulley is perfectly balanced.

This is but one of its strong points, however—its light—about one-third the weight of an iron pulley ; it fastens to the shaft with ease and at any point along the line that you want it, without the necessity of taking any shafting down.

Then too, it fastens absolutely secure—and there are no set screws to throw your shaft out of line.

Then again the work of your boiler and engine is lightened, for equipped with Dodge Wood Split Pulleys, you carry only one-third the weight on your line as with iron pulleys.

If you are interested in reduced costs for power transmission, you'd better investigate the unnecessary outlay for coal you are now subjected to, by carrying 200 per cent. more weight on your shafting in iron pulleys than is necessary, when you use Dodge Wood Split Pulleys.

The Dodge System of Rope Transmission will solve many perplexing problems, if you have a large power used, and your plant covers an extensive area.

CANADIAN FORESTRY ASSOCIATION

Synopsis of the Proceedings of the Fourth Annual Convention at Ottawa.—Interesting Discussion on Methods of Protecting the Forests from Fire.—Deliberations on Forestry Education and Other Pertinent Subjects.

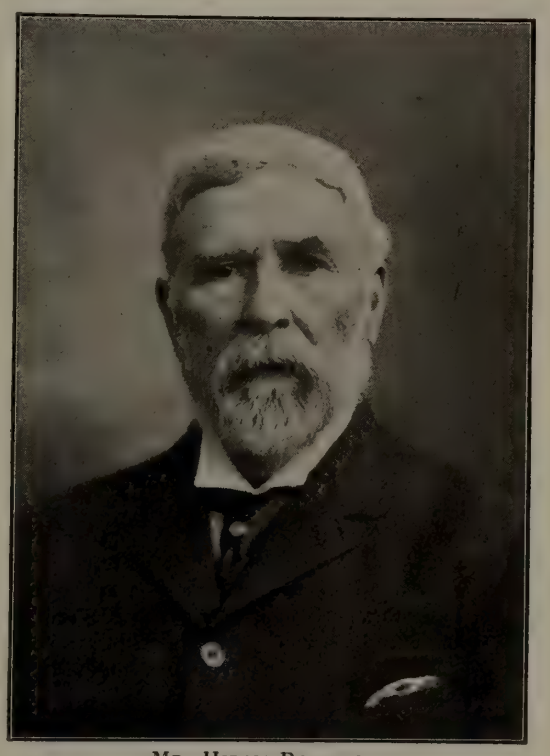
THE Canadian Forestry Association opened its fourth annual meeting in the Council Chamber of the City Hall, Ottawa, on Thursday, March 5th. Considering that Parliament was not in session, the attendance was large. Mr. William Little, of Westmount, president of the Association, occupied the chair, and among others present were the following:

Hiram Robinson, Ottawa, Vice-President; E. Stewart, Ottawa, Secretary; R. H. Campbell, Ottawa, Assistant Secretary and Treasurer; Aubrey White, Deputy Commissioner of Crown Lands, Toronto; Thos. Southworth, Ontario Director of Forestry, Toronto; Professor E. C. Jeffrey, Harvard University; Professor Macoun, Geological Survey, Ottawa; Hon. J. K. Ward, Montreal; Geo. McCuaig, Superintendent of Forest Rangers, Bryson, Que.; N. E. Cormier, Supertindent of Forest Rangers, Aylmer, Que.; Dr. Saunders, Director of Experimental Farms, Ottawa; George Johnson, Dominion Statistician, Ottawa; J. B. McWilliams, Superintendent of Ontario Forests, Peterbòro; His Worship F. C. Gendron, Mayor of Hull, Que.; Dr. Phinney, of Fish and Game Association; A. Knetchel, Forester New York State Forest, Fish and Game Commission, Albany; T. S. Young, CANADA LUMBERMAN, Toronto; Professor J. H. Faull, Toronto; Professor Goodwin, G. Y. Chown and A. P. Knight, Queen's University, Kingston, R. T. Pinkerton, Westmount; E. G. Joly de Lotbiniere, Quebec; Henry Robertson, Collingwood; C. Rankin, Mattawa; W. C. Caldwell, M.P.P., Lanark; Colonel J.A. McRae, Guelph; Sir Sandford Fleming, George Simpson, Robert Gorman, Norman M. Ross, J. R. Booth, G. B. Reid, T. King, R. B. Dowling, Sir James Grant, J. B. Frazer, R. C. Clute, A. Blue, A. M. Campbell, F. W. Cowie, Dr. A. Harold Unwin, C. Jackson Booth, E. J. Darby, A. F. McIntyre, Otto J. Klotz, Professor Shutt, and William Ide, Ottawa.

After the reading of the minutes a telegram was read from Hon. H. G. Joly de Lotbiniere, of Victoria, B.C., conveying his best wishes for the success of the meeting. Letters regretting their inability to attend were read from Rev. Father Burke, of Prince Edward Island, and Colonel Warne, of Vancouver.

PRESIDENT'S ADDRESS.

The theme of the President's address was the rapid depletion of the white pine forests of the United States and Canada. Through Mr. Charles T. Sargent, Professor of Aboriculture at Howard University, the American people obtained the first authentic information of the conditions of forests of the United States. This was in connection with the census of 1880. The president believed it would have been worth millions of dollars to the Dominion if the Canadian Government had followed the example of the United States and ascertained if we had so



MR. HIRAM ROBINSON,
President Canadian Forestry Association.

great a supply of valuable timber that we could afford to sacrifice it in the reckless manner we have. According to the United States census report of 1900, the stock of white pine then remaining did not exceed fifty billion feet, and the cut since that time has been twenty billion feet, leaving the supply only thirty billion feet, which is less than the amount of all kinds of lumber sawn in the single census year of 1900, namely, thirty-five billion feet. The present remaining supply of eastern white pine timber in the United States, therefore, would not furnish one year's stock for the existing saw-mills. The Northern States are drawing largely on the South and West for lumber, since the Southern and Pacific States, which in 1880 produced timber to the value of $50,000,000, exceeded this amount in 1900 by $200,000,000. The yellow pine of the South, in 1880 not generally known or much used in the North, produced in 1900 10,603,000,000 feet b. m., as compared with white pine 7,483,000,000 feet; hemlock, 3,420,000,000; spruce, 1,448,000,000 feet, which last was exceeded by the red fir, 1,736,000,000 feet—the Southern pine and Western fir almost exactly equalling the cut of white pine, hemlock and spruce, the former being 12,339,000,000 feet and the latter 12,351,000,000 feet. It is but reasonable, therefore, to assume that the pitch pine of the South to-day exceeds the whole output of pine, hemlock and spruce of the North.

It was a belief in the accuracy of the statements made in Professor Sargent's report that induced the Forestry Association of Quebec to memorialize the Dominion Government to grant a Parliamentary inquiry into the conditions of the forests of the country, especially the white pine. "I will not," said the President in conclusion, "attempt to say what amount of good white pine in my opinion exists in our Canadian forests, but of this I feel confident, that if the present indifference continues and the inquiry they asked for be delayed for many years more, the condition of our Canadian white pine forests may be stated in very similar terms to the school boy's essay on snakes in Ireland. He said: 'There are no snakes in Ireland.' We may be able to say, 'There are no white pine forests in Canada.'"

The manner in which the address was received indicated the strong sentiment of the meeting in favor of taking very effective measures to preserve the forests.

REPORT OF BOARD OF DIRECTORS.

Mr. Stewart submitted the report of the Board of Directors. It showed the membership to be 400, an increase of 33 over the previous year and divided as follows: Ontario, 128; Quebec, 54; Nova Scotia, 10; New Brunswick, 10; Manitoba, 78; Alberta, 61; Assinniboia, 15; Saskatchewan, 4; British Columbia, 17; Prince Edward Island, 1; Yukon, 1; United States, 17; England, 3; Germany, 1. The revenue for the year was $580.17, and the expenditure $474.02. The following abstracts are taken from the report:

If the Association is to have that expansion which will ensure its success and is to reach those whom it wishes to influence, it is clear that its work must be developed on larger and broader lines than those which up to the present time have been possible of adoption. It is desirable that meetings should be held in different parts of the Dominion and that the officers of the Association should in this and other ways have the opportunity of coming into more direct contact with those who might be induced to give their assistance so that the Association may be established on a firm and broad basis both in numbers and influence. This question is worthy the fullest consideration by the members of this Association.

Owing to the wet summer throughout the whole of Canada east of the Rocky Mountains forest fires have fortunately not been numerous or destructive. Those which did occur during the earlier and drier part of the season show that the danger is still ever present and

that no relaxation can be permitted in the efforts to maintain and increase the effectiveness of the fire preventive service. This is strongly emphasized by the loss that has occurred in the Western United States, particularly Oregon and Washington, where half a million acres were fire swept and the loss totalled up to about twelve million dollars. Contrasted with this the prevention work done in the Railway Belt in British Columbia, part of it contiguous to the burned area in Washington State, with a comparatively small staff, is a subject for congratulation.

Advance in British Columbia is marked by the adoption by the Legislature of the penalty clause of the Bush Fire Act as suggested by this Association and the setting apart of Long Lake timber reserve and Yoho Park in the Railway Belt, the latter of which with the Rocky Mountains Park of Canada on the eastern slope of the Rocky Mountains, which has been extended to include an approximate area of 2,880,000 acres, form one of the most magnificent forest parks in the world and one of which Canadians may well be proud.

The setting apart of forest reserves is a decided step forward, but the question of their administration is one that is far from being finally determined. The Province of Ontario during the past year formulated regulations for the adminstration of its reserves, but these regulations did not deal with the cutting of timber for lumber purposes, and it seems advisable that this subject should be fully discussed by this Association in order that the Government may be assisted in determining the proper policy to be pursued.

At the last session of the Legislature of Quebec a Commission was appointed to enquire into Forestry and Colonization. Unfortunately through uncontrollable causes this Commission became disorganized and it has been necessary to reconstruct it. It is sincerely to be hoped that a fair and thorough examination on the lines laid down for this Commission will be made by the Province of Quebec, for in the proper adjustment of the relations of these two interests lies one of the most important problems that the Province has to face and one which will have a far-reaching influence on its future prosperity.

In the Province of New Brunswick an Act has been passed authorizing the setting apart of a Forest Park, but its location has not as yet been determined.

In the Province of Nova Scotia information is being gathered as to the forest lands under control of the Crown, and it is altogether probable that some important advance in the adminstration of Crown Lands will be made in the near future.

The work of cooperation with the farmers in forest tree culture on the treeless prairies of Manitoba and the North-West Territories which was started a couple of years ago by the Department of the Interior is now assuming large proportions, and promises to prove very successful. Besides about 700 pounds of maple and ash seed there will be distributed this spring over 900,000 trees to 827 farmers. This gives an average of over 1400 trees to each farmer, and the applications received from those desiring to have their farms visited by the supervisors next season with a view of obtaining trees the next spring are more than double that number.

The total distribution when this spring's supply is finished will be 1,424,800 trees and 1400 pounds of maple and ash seed. The reports received from the supervisors of the condition of the trees planted in the spring of 1901 and 1902 were very satisfactory both in the Province and in the Territories.

The report of the Board of Directors was referred to the Committee on Resolutions, composed of Messrs. Hiram Robinson, Thomas Southworth, Dr. Saunders, Professor Macoun, E. Stewart, R. H. Campbell and George Johnson. The report of the treasurer, then presented, was referred to the auditors.

Mr. R. H. Campbell gave notice of motion to change the date of the annual meeting from the first to the second Thursday in March.

The following paper on the "Forests of New Brunswick" was then submitted :

The Forests of New Brunswick.

By Hon. J. B. Snowball

The subject given me to deal with is Forestry in New Brunswick. In forestry proper there is nothing whatever being done in the Province, beyond the work of a few wood rangers, whose duties it is during two or three summer months to protect the forest from fires, or rather to prevent settlers from burning their newly cleared land in these the most dangerous months for fires.

Such fires on several occasions have been very destructive. The Saxby gale (known as such), which occurred in October, 1869, swept across the province from south-west to north-east, and blew down a section of well timbered forest on the tributaries of the South-west Miramichi river forty to fifty miles long by fifteen miles wide. The following year fire got into it, and the whole district was burned over. For some reason this district has been unfortunate, as it has again been burned over since 1870 and the fire attributed to carelessness of settlers. Spots were missed by the blow-down and subsequent fires, these spots being mostly hardwood ridges. The lumber blown down consisted largely of rough pine, and was all on Crown Lands. The loss to the province and the district of this large section, over seven hundred square miles, is not less than a quarter of a million dollars annually, and the loss must continue unless some system of reforesting and better protection is adopted.

All woods natural to our soil are manufactured and utelized for export. There is very little hardwood square timber exported from this province. This wood is now mostly sawn into deals, furniture squares or spool-wood squares and shipped in contract sizes. The cedar is manufactured into shingles, and exported largely to the United States. There is very little pulp wood shipped. It is manufactured within the province and shipped as pulp. The export value of the above commodities, including spruce and pine deals, is estimated to amount to ten million dollars per annum.

There are different computations by various authorities on the area of the Province of New Brunswick, but it may be stated at 28,200 square miles ; or a little over 18,000,000 acres. About two-thirds of this, or 12,000,000 acres, is forest lands. Of this forest area about 60 per cent. is estimated as spruce land; 10 per cent. pine; 5 per cent. hemlock; 5 per cent. cedar, and 20 per cent. hardwoods, which latter consist principally of birch, beech, ash and maple.

For comparison I would repeat. New Brunswick has 12,000,000 acres of forest lands, or 18,750 square miles; Norway and Sweden 58,000,000 square acres of forest lands, or 90,625 square miles; Russia in Europe 527,427,000 acres of forest lands or 824,104 square miles ; Europe 687,000,000 acres of forest lands, or 1,073,000 square miles. 42 per cent. of Russia in Europe is under forest; 40 per cent. of Sweden in Europe is under forest; 24 per cent. of Prussia in Europe is under forest ; 22 per cent. of Norway in Europe is under forest ; 32 per cent. of Austria in Europe is under forest; 16 per cent. of France in Europe is under forest.

Every country of Europe has a large area of forest lands excepting Great Britain, which has less than 4 per cent. All these countries are seeking more or less legislation looking to the protection of their forests and the replanting of their denuded areas. Germany has taken the lead in wise forestry adminstration, and most of the other European countries have established forestry acadamies and now conservation of wood lands occupies prominent and studious attention.

The area of New Brunswick inland waters, including rivers and lakes, is about four hundred square miles, and the salmon, trout and other fishing on these waters is said to be equal to the best in the world. The forest lands of the province also cover one of the best game regions in North America, considered from the sportman's point of accessibility from railways. Trappers also find New Brunswick forests rich in fur-bearing animals.

Persons desirous of settling on the Crown Lands of the Province, whether they are immigrants or residents, may acquire grants thereof, either under the Labor Act or by cash purchase. Under the Labor Act one hundred acres may be obtained by the performance of thirty dollars' worth of work on the roads, or a payment of twenty dollars cash in lieu thereof, the clearing and cultivation of ten acres of land, the building of a habitable house 16 feet by 20 feet, and the continuous residing therein for three years. The words "continuous residing" are liberally construed, and under the law the settler may be absent from his holding for certain months in the year to enable him to engage in wage-earning occupations.

Mr. Campbell read a paper on Forestry Conditions in Nova Scotia, of which the folllowing is an abstract :

Conditions of Lumbering and Forestry in Western Nova Scotia.

By F. C. Whitman.

The writer outlined the conditions of forestry and settlement in Western Nova Scotia, and particularly in the Annapolis Valley. The forest growth in this district, discovered in 1505, was so dense that it was over 200 years before any roads were cut through it. The first trading was with the New England States, but exports of wood were very limited, then later a trading interest was developed with the West Indies and lumber was exchanged for sweets. The export to the West Indies still continues, and as the markets developed the cutting of the forests became general. To-day the forests are well nigh depleted, and within the past year Provincial operators have gone north to Newfoundland and Labrador.

When cutting first began spruce, hemlock and hardwoods were scarcely touched ; it began on the white pine until to-day it is commercially gone. The cutting of the spruce followed and is still going on at the rate of 1000,000,000 feet annualy in this district. The pulp mills are eating up the small growth, and the saw mills cut from 1 inch by 2 inch up. There has been for many years past a very large export to South America of 1 inch by 3 inch and up, 2 inch by 3 inch and up, which also takes small and young growth wood. These South American orders call for a proportion of 12 inch wide stock, and great difficulty is now found to secure the proper proportion. The character of the cut of wood, and the increasing value of spruce lumber is tending toward absolute denudation. I believe that it is opportune to undertake a movement in the study of forestry and that an appeal to the people in the interests of the country would lead to a betterment before it is too late. The foot hills and the vast interior, although no longer a forest primeval, will always be more suitable for wood growth than for any other purpose.

The standing timber in the order of commercial value would be as follows :—

White Pine—Nearly all cut, young growth scattering.

Spruce—Old growth confined to holdings of large operators, and in scattering bodies on farm lots, or remote sections. Young growth luxuriant everywhere, and will come to a size fit for commercial purposes in 30 years from breaking ground.

Hemlock—Abundant in many sections, now being cut where easily accessible, largely used for railway ties. Bark wasted.

Fir—Trees die early, much affected by insects. Used for cooperage.

Poplar—Quick growth but sound stock small in size, scattered through low lands or hillsides along stream. Used for pulp and staves.

Elm and Cedar—None.

Birch, White—Abundant.

Birch, Yellow—Abundant.

Birch, Redheart—Scarce.

Maple—Rock and softer kinds abundant, scattering bird's eye.

Beech—Abundant.

Oak—Scattering growth according to elevation, mostly red oak, coarse open grain. Used for car building.

Ash—Very scattering, kept under by basket and hoop makers.

All the hardwood grows mixed and would only pay to cut as it runs.

White pine was largely used for ship-building, the butt was often used and the top wasted, as can be seen in nearby woods to-day. Spruce and all the hardwoods are now used for shipbuilding, and the fishing fleet annualy takes a very large quantity. It will be noted

particularly that a northerly slope produces the better timber, having a brighter foliage and a heavier growth. Where the timber has been cut away on a southerly slope, and fires have occurred, the soil has lost its fertility, and the new growth is very sparse.

In many instances so unsatisfactory do the conditions appear that it might be considered waste land. As an instance of growth, in going to a favorite fishing pool in September, the writer in going along a well-trodden path had to step aside to pass a young poplar that had sprung up and had grown over eight feet in that one season. There were no signs of this tree on the same path in the spring. In 1902 a graft of Russett apple, considered to be the slowest grower of any of the fruit trees, grew from May to October 6 feet 8 inches. It was grafted on wild stock. Lumbermen who have been careful to cut spruce not less than 14 inches at the stump say that it will give them a cut every ten years, and the second cut will be better than the first. In Cumberland County, at the head of the Bay of Fundy, the growth is more vigorous, and they can cut every seven years. Two hundred to 2500 acres will produce a paying annual cut, and the value of the whole be maintained with systematic cutting. One reason for this is that the Western Nova Scotia forest area is overgrown in the number of trees, and the soil cannot support the growth unless thinned out. Both hardwood and spruce have an early maturity, and once past that point rapidly deteriorate. The soil is not rich and in many places does not retain sufficient moisture to keep the older growth.

The country named is not subject to violent wind storms, and little damage is done by winds except to hardwood on exposed hills. There is an impression that the annual fall of rain or snow is decreasing, but the lack of sufficient water for driving logs, and the disastrous spring floods, may possibly be traced to the clearing out of timber along the water courses, so that snows melt rapidly in the spring and the land does not hold the moisture that it did in early years.

Professor Macoun said that the conditions in Nova Scotia were just an epitome of the destruction that is going on in every province of the Dominion. He was in favor of timber lands passing into the hands of private individuals, because the Governments of some of the provinces did not seem disposed to properly guard them. Ontario was doing much more than any other province.

Mr. G. Y. Chown was not in favor of private ownership of the forests. Professor Fernow, he said, contends that the individual cannot properly do forestry work, the returns being too slow. A large corporation may have immense wealth, but the private individual is anxious to obtain a proper return for his investment. We must, therefore, look to the governments and force them to protect the forests and preserve them for the people.

Mr. Thomas Southworth said that the original steps towards the protection of the forests had come from the government officials.

Mr. E. G. Joly de Lotbiniere maintained that the government fire ranging system was not sufficient. Private owners should have fire rangers of their own so as to provide some system of protection in addition to the government service. Mr. Joly told of the measures adopted to protect his property in the province of Quebec. On a section of twelve miles he kept two gangs of men, each gang provided with railway velocipedes, shovels, buckets, etc. These men had extinguished a large number of fires, and the parties owning adjoining property had adopted the same policy.

Mr. Aubrey White said that in Ontario the limit holder was not taxed so much per mile for fire ranging. He was asked to state how many rangers he would require and told to select them, the government and the limit holder paying an equal share of the cost. He did not think there was any reason why fires should always follow railway construction, as Mr. Joly contended. With the construction of the Canada Atlantic Railway rangers were placed along the line and the necessary precautions taken, with the result that there were no fires.

Mr. Joly held that the danger arose after the railway was constructed.

Mr. George McCuaig said that the province of a ranger was to put out a fire in its incipient state. When a fire had obtained a good start it was almost impossible to extinguish it. The Quebec system worked satisfactorily, but he thought it might be extended by securing co-operation between the government on one hand and municipal authorities on the other. Municipal officers could do much good by looking after settlers who carelessly set out fires.

THE FIRE RANGING SYSTEM OF ONTARIO.

Following the reading of a paper on "Forest Fires," by Mr. W. A. Hendry, of Halifax, an address on the fire ranging system of Ontario was given by Mr. Aubrey White. Mr. White outlined the first steps that were taken to provide for the preservation of forests from destruction by fire. He then took up the appointment of the fire rangers and the manner in which they were chosen. The department had always impressed upon the rangers the necessity of not antagonizing the settler. The results of the fire ranging system in Ontario were detailed as follows:

In 1885 37 rangers were employed, at a cost of $7,911. A number of fires were extinguished and the general effect of the system was good.

In 1886 45 rangers were employed, at a cost $9,847. There was no trouble or friction with settlers. A large fire occurred on the Bonnechere river, although the quantity of timber damaged was not so large as supposed.

In 1887 55 rangers were employed, at a cost of $15,000. This was the dryest season on record. Day and night rangers fought with fire and called out assistance. As many as one hundred men, in addition to the regular staff, were employed. Settlers co-operated with rangers. The licensees were supplied with information as to the burned timber, which was taken out before the borers got into it. The number of fires reported was 110, and the timber damaged 200,000,000 feet, the loss being $70,000. The licensees asked that limit holders be compelled to place rangers on their property. The causes of fires were settlers clearing land and setting out fires in dry season and high winds; river drivers making fires and not extinguishing them before leaving; locomotive sparks; hunters and fishermen using fire carelessly. In this year the system of having ranging on Crown lands was first adopted.

In 1888 70 rangers were employed, at a cost of $17,854. Seventy fires were reported and 160,000,000 feet of timber damaged, 15,000,000 feet of which was a total loss. The main cause was carelessness of settlers.

There were 75 rangers employed in 1889 at a cost of $15,468. Few fires occurred and all timber damaged was cut.

In 1890 there were 83 rangers, which cost $17,525, and no fires.

In 1891 98 rangers cost $20,053. This was a dry season and several fires occurred on Crown and licensed lands. Of 100,000,000 feet of timber destroyed, 95,000,000 was on Crown lands. The damage was $60,000.

There were 86 rangers employed in 1892, at a cost of $18,362. Being a wet season, there were no fires.

In 1893 there was a staff of 106 rangers, which cost $19,831. There were several fires but no serious loss.

In 1894 108 rangers were employed, at a cost of $26,276. There were no fires in the east, but in the west where no rangers were employed and there were extensive explorations for minerals, etc., several fires caused considerable damage. Owing to the slackness of demand the timber was not cut.

The season of 1895 was very dry; 117 rangers were employed, at a cost of $26,253. The timber damaged was 46½ million feet, including some pine on Crown lands in the township of Grant.

In 1896 there was a staff of 160 rangers, which cost $47,719. Fires on licensed lands were mostly suppressed, but there were three fires on Crown lands near Wahnapitae and Biscotasing, 65,000,000 feet of timber being damaged, all of which was sold.

A staff of 179 rangers was employed in 1897, costing $49,926. No fires occurred.

In 1898 195 rangers were employed on licensed territory and 11 on Crown lands, the former costing $53,498. There were a few unimportant fires.

In 1899 190 rangers on licensed territory cost $46,150. On Crown lands there were twelve rangers. A fire occurred in the townships of Bowell, Foy and Harty, all the destroyed timber being sold.

On licensed territory 185 rangers were employed in 1900, at a cost of $53,970. There were twelve rangers employed on Crown lands. Ninety fires were extinguished, including one in Dana township.

In 1901 there were 236 rangers employed on licensed territory, at a cost of $60,132, and 10 men on Crown lands. In the Rainy River and Thunder Bay districts the rainfall was heavy, but in the east the season was dry. Early in July there was a serious fire in the Temiscaming district, said to have been caused by smouldering brush heaps left by settlers. Not much pine was damaged, but a quantity of spruce and other soft woods.

In 1902 234 rangers on licensed territory cost $68,400. There were forty fires and 10,000,000 feet of timber damaged.

Mr. White said that in no case had the Government received a complaint from a licensee as to the fire-ranging system.

Mr. J. R. Booth said that the Ontario Government measures had saved millions of dollars' worth of timber. He urged that the Government enforce the regulations in every possible way and keep settlers out of districts where there is only a small tract of agricultural land. He thought some of the officers had been too lenient in this respect in the past.

Mr. Stewart thought that the government should take up the exploration of the country with a view to ascertaining what land should

be opened for settlement and what kept as forest reserves.

Mr. A. Knetchel, forester to the Forest, Fish and Game Commission of New York State, complimented the Government and the Association on the success in reducing the fire loss and told of the system in vogue in New York State.

Mr. Joly again referred to the number of fires started by locomotives. In a stretch of six miles he had proven that the Intercolonial Railway engine had set fire in five places. Four of these fires, according to the evidence submitted at an investigation granted by the Government, were extinguished by Mr. Joly's own men, but the fifth was too far advanced to be conquered. He maintained that the engines are not properly inspected and contended that it should not be left to the railway authorities to say whether their engines were provided with proper apparatus to protect the forest from fire. If precautionary measures were taken nearly all the fires caused by railways would be prevented.

Mr. Chown thought the Government should put on more fire rangers on Crown lands and that there should be a still more effective manner of controlling the fire system.

This brought up the question of the competency of fire rangers. Mr. McCuaig stated that in the province of Quebec a ranger was compelled to show that he was qualified for the position from every point of view. As to settlement, he contended that no man should be allowed to locate in a section where there were only one or two farms.

THE FOREST FIRES OF 1902.

A report on the forest fires which occurred throughout the Dominion in the year 1902 was submitted on behalf of the Association by Mr. R. H. Campbell. In Nova Scotia the area burned over was greater than in 1901, but a considerable portion was not at the time good timber land. The area probably exceeded 25,000 acres, and the loss was between $100,000 and $200,000.

In New Brunswick the summer of 1902 was wet and comparatively little damage to the forests was done. The only fire of any account occurred in the county of Kent.

The Province of Quebec escaped without serious loss owing mainly to the wetness of the season, as many fires were started. In the Upper Ottawa district there were eight fires that were sufficiently serious to require an expenditure of about $900 for extinguishment. Three of these fires were caused by locomotive engines, three by carelessness on the part of river drivers, and others by settlers and lightning. The rangers employed in this district were 29 regular and 21 special. The holders of timber licenses urge an addition to the number of fire rangers and the Superintendent suggests an increase of five. In Fire District No. 2 there were 79 fires reported, 47 of which occurred in May, 15 in June, one in July, 10 in August and 6 in September.

Six specific instances were reported by one ranger in which fires were set out by settlers in contravention of the Statute. The number of fire rangers in this district was twenty-two, and they had to patrol and safeguard a tract of 17,824 square miles. In the Gatineau District the average area for each ranger was 360 square miles, on the Lower Ottawa 585 square miles, and in the St. Maurice Agency 1316 square miles. The total amount expended in the province for the protection of the forests from fire was $17,000 but the fire tax brought in the sum of $7,306, leaving the net expenditure $9,694.

Most of the particulars regarding the fires in Ontario have already been given, and no serious fires occurred in Manitoba and the Northwest Territories.

Several fires occurred in British Columbia, where the season was exceptionally dry. One of these started on Mr. Well's timber berth on the Beaverfoot river, where about 1,000,000 feet of timber was destroyed. The fire was confined to the worked-over portion of the limits. In the Boundary district several fires are said to have started from prospectors' smudges.

In the evening an illustrated lecture was given in the Normal School by Professor E. C. Jeffrey, of Harvard University, on "Forest Trees and Their Uses." Hon. Clifford Sifton presided, and in introducing the lecturer dwelt upon the manner in which the forestry subject had been neglected in proportion to its importance to Canadian people. Professor Jeffrey, who is a Canadian by birth and education, advocated that none but scientific experts be placed in charge of forestry work. The Canadian pine, he said, was one of the most valuable timbers in the world, as it was of the greatest practical utility for general purposes. He outlined the characteristics of different woods, giving reasons why some are strong and some are weak. The lecture was illustrated by stereoptican views.

SECOND DAY.

Resuming on Friday morning, the first business was a paper on "Tree Planting in Manitoba," by Mr. A. P. Stevenson, of Nelson, Man. This was followed by a paper on "The Growth of Forest Trees in the Forest Belts and Arboretum of the Experimental Farm," by Mr. W. T. Macoun, horticulturist. An abstract of this paper will appear in a later issue.

The paper brought up a discussion as to the methods of planting trees. Mr. Norman M. Ross explained the system adopted in Manitoba and the Territories, and Mr. Knechtel gave some particulars of the reserves in New York state. He had ascertained that two men could plant 1,600 trees per day. With an appropriation of $4,000 a nursery had been made in the Catskills for half a million seedlings and some money was left. The average cost was about half a cent a tree. Replying to a question as to the percentage of the trees still living, he said that last spring, in a plantation of 5,000 trees, 97 per cent. of spruce, 80 per cent. of white pine, and 95 per cent. of Scotch pine were found in good condition. Scotch pine showed most rapid growth, namely, nine inches in about nine months.

Colonel McRae, of Guelph, said he, too, had found the Scotch pine to make the most rapid progress. He asked Mr. Knechtel whether it was advisable in a plantation to remove the dead branches, to which the latter replied in the affirmative, adding that with pine trees he would apply a coating of lead paint.

Mr. Hiram Robinson brought up the question whether by removing a dead branch it would be possible to obtain more clear lumber than if the branch were permitted to remain in the tree.

Mr. Joly thought that as long as the branch remained, the tree would continue to develop the knot. Coniferous trees should be carefully trimmed, but with hardwoods he would let Nature do her own trimming.

Mr. Ross said that in the Scotch pine forests of Germany it was the custom to go through them when about twenty years old and prune such trees as had made the most satisfactory progress.

At the afternoon session the secretary read a paper on "Forest Protection in the Railway Belt of British Columbia", by James Leamy, Crown Timber Agent, New Westminster. An address on "Forestry Education" was given by Professor W. L. Goodwin, Queen's University, Kingston. Prefacing his remarks by reference to the gradually declining timber supply and the increase in the value of timber lands, Professor Goodwin reached the question "Will Forestry Pay?" That it paid in the long run there could, in his opinion, be no question. The 35,000,000 acres of German State forests produced a net revenue of $1.80 an acre, equal to a net annual income of $63,000,000; and both capital and income are increasing. This is after some 150 years of forestry management, but the records show that the State forests have yielded a fair income from the start. When in Kingston recently, Dr. Fernow told of German municipalities which paid all taxes and even declared a dividend from the profits of their carefully managed forests. The large profits of the present Canadian system represented for the most part capital being eaten up, as our forests are rapidly decreasing. Forestry education was very essential in order that we might work into a system of forestry suitable to Canadian people and Canadian conditions. Professor Goodwin then reviewed what had already been done in Canada along the line of forestry education. Recent steps included the engagement of Dr. Fernow to lecture to the students of Queen's University in January, 1901, followed by a course of lectures in January and February of this year. One result of these lectures, the speaker said, had been to determine several students to make forestry their profession; and the Board of Governors of Queen's University had decided to go forward next session as far as circumstances will permit to make provision for a forestry course.

Dr. Unwin spoke of forestry education in Europe, where he graduated. In Germany the forestry course was seven years, but he would not advocate such a lengthy term in this country.

An interesting address was given by Professor A. P. Knight, of Kingston, on "The Effect on Fish Life of Sawdust in Rivers." His observations and experiments, he said, had been confined to the Ottawa and Bonnechere rivers. He believed that no healthy fish had ever been killed by the discharge of sawdust into these streams. His view was supported by Professor Prince, of the Dominion Fisheries, but refuted by Dr. Bastedo, of the Ontario Fisheries. Personally conducted experiments showed that from fifty to eighty per cent. of the different kinds of sawdust thrown into streams sank in from three to five minutes. Owing to the late hour there was very little discussion on the paper, which was pronounced a most valuable one.

A motion was then introduced by Mr. Campbell changing the date of the annual meeting to the second Thursday in March, which was carried unanimously. This will avoid a clash with the annual meeting of the Canadian Mining Institute.

It was decided to hold the next annual meeting in Toronto.

Mr. Joly submitted a resolution calling upon the Government to increase the number of fire rangers throughout the provinces and to explore the unsettled portions of the country more fully and to prepare maps showing those portions of the country fitted for settlement and those entirely unsuited for this purpose yet good for timber growing. The resolution referred to the advanced steps that had been taken towards forestry protection by the Ontario Government and was carried unanimously.

ELECTION OF OFFICERS.

The election of officers for the ensuing year resulted as follows:

Patron, His Excellency the Governor General; Hon. President, W. Little, Westmount; President, Hiram Robinson, Ottawa; Vice-President, Aubrey White, Toronto; Board of Directors, Dr. Saunders, Prof. Macoun, J. R. Booth, C. Jackson Booth, Ottawa; E. G. Joly de Lotbiniere, Quebec; Thos. Southworth and John Bertram, Toronto; Secretary, E. Stewart, Ottawa; Assistant Secretary and Treasurer, R. H. Campbell, Ottawa. Vice-Presidents of the provinces: Ontario, J. B. McWilliams, Peterborough; Quebec, Hon. E. F. Caron: New Brunswick, The Lt.-Governor; Nova Scotia, A. H. McKay; Prince Edward Island, Rev. Father Burke, Alberton; Manitoba, Major Stewart, Winnipeg; Assiniboia, J. F. Dennis; Saskatchewan, P. L. Laurie; Alberta, Wm. Pierce; Arthabaska, F. B. Wilson, Fort Vermillion; British Columbia, Hewit Bostock; Yukon, The Commissioner; Keewatin, The Lieut. Governor of Manitoba.

The passing of votes of thanks to the railway companies, the City Council, the Secretary and Treasurer of the Association, and the Press, concluded the business of the convention.

INCORPORATION OF JOHN FENDERSON & COMPANY.

A few months ago a Quebec charter was granted to John Fenderson & Company, who have for a number of years been among the foremost manufacturers of New Brunswick cedar shingles. Their product, manufacted by three mills owned by the company along the line of the Intercolonial Railroad in Quebec, is largely marketed in the Eastern States, where their well-known brand commands the top figure.

The business of John Fenderson & Company has been in operation eight years, having been started in 1895. The stock is principally owned by Mr. John Fenderson, formerly of Oswego, N. Y., and Mr. Arthur C. Dutton, president of the A. C. Dutton Lumber Company, of Springfield, Mass. The president of the new corporation is Mr. John Fenderson, a gentleman who has devoted the last forty-five years of his life to the operating of lumbering plants. His son, Mr. Chas. Fenderson, is vice-president and manager of the company's mills at Sayabec, P. Q. The secretary and treasurer of the company is Mr. Arthur C. Dutton, of Springfield, who handles the finances and the sales department of the business. Mr. Mase Fenderson, a brother of the president, is superintendent of the mill at Red River, which is operated only during the winter months, and of the Salmon Lake mill, which is exclusively a summer plant.

Saw and Shingle Mills of John Fenderson & Company, Sayabec, P. Q.

Illustrations of the mill and yard at Sayabec are presented on this page, and will give the reader a fairly clear idea of the extent of the company's plant at that point. It is located on the Intercolonial Railway and on the St. Pierre River, and is a model plant in every respect, having been constructed in 1897. It includes a circular saw-mill of 30,000 feet per day capacity and eight shingle mills, capable of turning out 35,000,000 shingles per year. Included in the equipment is a lath mill and a heavy planer and matcher for dressing the spruce boards and scantling. The company also operates a general store at this point.

The saw-mill is operated days only, while day and night crews handle the shingle mill. A siding from the railroad runs directly to the sheds and shingle piles in the mill yard, and the Intercolonial road furnishes an excellent outlet for the product to all points in New England. The company owns a tract of 55,000 acres of cedar and spruce timber, all of which can be brought down the St. Pierre to the mill, the farthest point from the mill to the extreme edge of the timber tract being less than fifteen miles. At a point twent-five miles east of Sayabec the company recently completed a new mill at Salmon Lake. This plant is in practically every respect a duplicate of the one at Sayabec, the single exception being that six shingle machines are operated at this point instead of eight, as at Sayabec. Its capacity is about 25,000,000 shingles per year and 30,000 feet of lumber per day. A third mill is operated by the company during the winter months at Red River, twelve miles west of Sayabec, where four machines are operated night and day.

All of these mills are equipped with modern appliances for turning out a perfect product, and are lighted throughout by electricity. The company makes a leading specialty of its ability to furnish shingles at all times for immediate shipment, care being taken not to sell ahead of the saws, and during the past year when the lumber business in many sections of the country was practically paralyzed by the car shortage, this company at all times found it possible to secure cars enough to move its product as fast as wanted, and they are prepared at the present time to load shingles and ship them from the mill within forty-eight hours from the receipt of the order, a feature which is appreciated by many buyers.

The entire product of these mills is marketed by the A. C. Dutton Lumber Company, of Springfield, Mass., and includes shingles, spruce boards, scantling, plank and one and one-half-inch lath. The A. C. Dutton Lumber Company is one of the strong wholesale houses in Western New England, of which Arthur C. Dutton is the president and T. D. Potter treasurer.

Shipping Yard of John Fenderson & Company, Sayabec, P. Q.

TRADE NOTES.

The M. Garland Company, manufacturers of general saw mill machinery at Bay City, Mich., have just shipped a second car of saw mill machinery to Revelstoke, British Columbia, including a special gang edger. One side of this machine is a regular Garland three saw edger, and the other side is a gang of ten saws, set 1-inch apart with separate feed rolls so that a cant 6"x12" can be run through the machine and made into 6" strips at one operation. By special collars this gang can be changed to a five saw gang to make 2x4 and 2x6 from the cant.

The M. Garland Company, of Bay City, Mich., are bui ding an 8-inch spring tension band mill with special guide which is raised and lowered by friction, the lever being conveniently located and operated with the greatest ease. This band mill has many other features of merit, notable among which is the spring tension, which is a system of cushions and weights so arranged that a hard ball of sawdust may be thrown between the saw and wheel without injury to the saw or parts. This band mill will be installed in the Sprague mill at Kingman, Maine. This mill will have a large capacity, as it is strongly built and perfectly balanced. The band wheel shafts are extra large, this being a notable feature with all the band mills built by the M. Garland Company.

The Lumber Underwriters, of 66 Broadway, New York, have gradually extended and increased the lines which they are able to accept on lumber risks. As will be seen by their advertisement on another page of this issue, they are now able to accept a line of $40,000 on a single detached unexposed lumber yard. This large line is only made possible by the large amount of reinsurance which the Lumber Underwriters are able to obtain from strong stock companies. Thus by securing a policy from the Lumber Underwriters the reduced rate at which they are able to accept insurance may be secured not alone for the net line which the Lumber Underwriters can carry but also on the large amount of insurance which could otherwise only be secured at the tariff rate. The Lumber Underwriters anticipate that the time is not far distant when practically all of the lumber yards in the country will be insured in the companies which limit themselves to lumber risks. It is estimated that there are now more than four thousand yards which are partially or fully insured by the various lumber insuring companies.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:

IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance .. $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

LUMBERING IN BRITISH COLUMBIA.

The activity in lumbering operations in British Columbia this year far surpasses anything heretofore known. During the months of January and February 195 applications for timber licenses were received and 81 licenses granted. Owing to the difficulty of prospecting claims in the winter, the demand for licenses does not usually commence before April. Although in every section of the province operations are on an enlarged scale, the greatest degree of activity prevails in the Kootenay district, where mining has to a large extent given place to lumbering.

Speculation in timber lands has accompanied the increased lumbering operations. The wholesale staking out of limits that has taken place has caused considerable excitement and it is said that in too many cases limits were purchased without having been properly cruised. For this reason it is feared that some of the investments may prove unprofitable.

There is likewise reason to believe that the production of lumber may be overdone. The prospective demand from Manitoba and the Territories has been magnified by enthusiastic individuals, and while it is true that the lumber consumption is likely to increase each year, and that there are bright prospects ahead for our western country, it should not be forgotten that the process of settlement must be gradual. It is a question whether the capacity of the saw mills now built and under construction is is sufficient to supply the demand at least for the next year or two. If such is the case, it would seem advisable for persons with money to invest in lumbering enterprises to seek new fields as far as is expedient, not overlooking the possibilities of export trade. British Columbia is well situated geographically to supply the markets of Australia, China, Japan, and South Africa, all large importers of lumber.

THE ALLEGED LUMBER COMBINE.

A few newspapers have recently devoted much space to the doings, or rather alleged misdoings, of the Western Retail Lumbermen's Association, of Winnipeg, and by sensational headings have endeavored to work up public feeling in opposition to a so-called trust. The laymen in the east must surely be of the opinion that there has suddenly been discovered some carefully devised plot to wreck the fortunes of the farmers of the west and to extract from their pockets their hard earnings in order to enrich the "lumber kings." Not for a moment would it be supposed that this same Western Retail Lumbermen's Association had been in existence for twelve years, that it had held annual meetings which were regularly reported by the press, and that its constitution and by laws are to-day essentially the same as when the association was originally organized.

If an official of the Canadian Pacific Railway Company has been correctly reported, that corporation has turned philanthropist, a change of front which will be greatly appreciated by the people of Canada, who, we regret to say, have not in the past been able to detect evidences of this commendable quality in their business dealings with that company. To facilitate the shipment of lumber into the Northwest, we are told that the company reduced frieght rates and offered financial assistance to dealers to enable them to obtain a supply early in the season. They have even considered it necessary in their new capacity as guardians of the rights of the people to acquaint the local Government of the exorbitant prices which were being asked for lumber by manufacturers and dealers. All of which is in striking contrast to what has in the past been considered the policy of the Canadian Pacific corporation.

If there exist a combine which is responsible for extorting from the consumer fabulous prices for lumber, such combine should be abolished. The history of the association, however, proves that its object has not been to boost lumber prices at every opportunity, but rather by means of co-operation to bring about harmony and promote good feeling in the trade. It seems that the association has been attacked on the phraseology of its constitution and by-laws, perhaps none too carefully compiled, rather than on evidence of injury or hardship inflicted upon the buyer of lumber as the result of the workings of the association. The contention that the price of lumber has been advanced unreasonably cannot be substantiated. Indeed, lumber is to-day selling at a correspondingly lower figure in the Northwest than in Ontario and other parts of the Dominion.

It is only reasonable to suppose that inflated prices would encourage the importation of foreign lumber, yet each succeeding year for the past three years has shown a decrease in the quantity imported into Manitoba from the United States. This in the face of an increased consumption. Here are the figures:

1900	24,000,000 feet.
1901	15,835,000 "
1902	13,228,000 "

Of the 1902 import sawed boards and dimension timber represented 11,039,000 feet and tongued and grooved pine boards 1,285,000 feet. The import of shingles shows a still greater falling off, declining from ten million in 1900 to less than two million last year. As the Minnesota manufacturers are not associated in any way with the organization which has been made the subject of attack, they might naturally be expected to more vigorously exploit the North-West lumber market in search of the handsome profits accruing through the operation of the trust. An explanation of the decreased import is furnished by Mr. E. F Stephenson, Crown Timber Agent at Winnipeg, who in his last report to the Department of the Interior, says: "The low rate of dues charged by the Government enables manufacturers to undersell the imported article, to the advantage of the purchasing settler. Comparing prices for lumber and building material in Manitoba at the present time with those for the same kind and quality in the bordering states, they are considerably lower." This statement, from an impartial source, is also a refutation of the charge of exorbitant prices.

EDITORIAL NOTES.

Winter sawing is becoming more popular. The Pigeon River Lumber Company, of Port Arthur, and the Algoma Commercial Company, of Sault Ste Marie, operated their mills last winter for the first time. Their method is to dump the logs into a pond of water which is prevented from freezing by a system of steam pipes. It will be interesting to learn whether the additional expense thus entailed is warranted by results.

In the diligent search that is being made for a more profitable means of utilizing sawdust, some peculiar theories have been advanced, one of which, of German origin, is to produce a food for horses by a mixture of sawdust and other materials. The most recent invention, if it may be so termed, will probably be received with greater credence than were many others. It is the discovery of Alexander Glassen, of Aachen, Germany, and, according to the United States patent dated December, 1902, is for "the conversion of cellulose of wood or the like into sugar." The material is subjected in a closed vessel to a heat of 120 to 145 degrees centigrade, and is acted upon by a mixture of sulphurous and sulphuric acid, the variation in the heat required being dependent upon the quality of the wood used. The temperature also very greatly affects the yield of sugar, any lower temperature than that stated giving a much smaller return. Birch is said to require a temperature of about 130 degrees, and western fir 144 degrees. It is claimed that a yield of 300 grams of sugar per kilo of dry wood or sawdust can be obtained, and of the sugar thus produced from 80 to 90 per cent. is fermentable glucose. Should this discovery prove to be practically and commercially feasible, it would mean much to the lumber industry of this country.

THE DOUBLE CIRCULAR SAW MILL.

Liscomb Mills, February 28, 1903.

Editor Canada Lumberman:

Dear Sir:—In your February issue I note in your column on "Views and Interviews" an article discussing the double circular saw mills and raising a few points that I am glad have been brought up in print and I trust that you can spare space in your valuable publication for a reply from me and an explanation as to why the Killam double circular mill does not possess the weak points discussed in the article under mention. Let me quote from your article: "I think Mr. Killiam's circular mill would be likely to increase the quantity of waste and produce more thick and thin lumber than in the ordinary single cutting saws. I know that some trouble in this direction has been experienced by the double cutting band, and while it may be possible to turn out the lumber equally as good as by the single saw, this I believe can only be done by giving extra care and attention to the saws and having men to operate them who are expert sawyers of the first order."

I think the above quotation covers all the important points raised in the article, and in answering I shall start as the Yankee does and ask a question myself. Why will the double circular mills make more thick and thin lumber and more waste than the single circular mills? There are no reasons why they would, and many reasons why they will not do the things spoken of, and actual tests in the manufacture of lumber using the double circular have shown that they do not possess the faults we are discussing.

I am well aware that double cutting band saws do make a lot of trouble and any saw cutting both ways of the grain of the log (one cut from butt to top and the next cut from top to butt) will make thick and thin lumber for this reason: sawing from top to butt, cutting against the growth-grain of the log, will always incline the saw from the log, while the other cut from butt to top will have the opposite effect. I might make the point now that no saw fitter, no matter how expert, can so fit saw teeth as to overcome this law of grain of wood, and so it follows that any saw cutting both ways of the grain of log will make a lot of thick and thin lumber.

It is assumed by the writer that no manufacture of lumber will employ a sawyer who cannot make good lumber with a circular saw, and as there are no mechanical difficulties to overcome in operating two saws cutting on one side of a log at the same time there is no reason why the sawyer competent to operate an ordinary circular mill cannot as easily operate the double circular mill. As an illustration of this I will state that the sawyer who made the first tests with the double circular was a young man who had sawed with a single circular but a few months and he had no trouble in sawing a big average and handling the double circular without a hitch, making extra good lumber. The sawyer has the same view of the log as in sawing with a single circular and the same opportunity to use his judgment as to how to cut same.

I might observe here that in the final cuts on the last half of the log the double circular taking two deals and leaving the slab finds the log more rigid and will cut more even lumber than the single circular mill when cutting the last deal and leaving the slab, as in the latter case the remains of the log is in a very springy condition.

The writer uses a first saw of from 50 to 60 inches and a second saw of from 60 to 72 inches. In extra heavy cuts both saws are set in line; the smaller saw cuts through the greater part of the log and the larger saw finishes the cut. This arrangement permits full feed being carried in cutting large logs and insures the cut being complete. Attention can here be called to the fact that no time is lost in cutting through unfinished cuts with an axe and the lumber is better and cleaner cut with no loss of time or lumber.

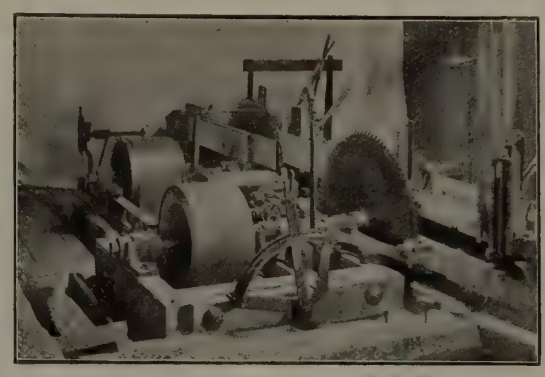
Keeping the above facts in mind, let me call your attention to the reasons why the double cutting circular mill will cut less thick and thin lumber, and make less waste than a single circular mill.

The distance between the original and the additional saws is a fixed distance (no matter if you are sawing boards, plank, battens or deals), the additional saw being set and firmly held at the required distance from the original saw, and as the saws are cutting on both sides of the piece of lumber under cut at the same time, it follows that saws being properly fitted, a perfect cut of the piece of lumber sawn between the two saws occurs. The second piece is produced outside the additional saw, which is assisted in resisting any spring pressure or other deflecting influence by the original saw and the piece of lumber being sawn between the two saws, thus producing an evenly sawn piece on the outside saw.

The whole operation of this double circular mill is such that advantage is taken in cutting the log of all of its rigidity, and as all cuts are made one way of the grain of the log and the tendency of the log to spring overcome to a much greater extent than with single circulars, hence it follows that lumber is sawn more evenly and more smoothly thanby any other method.

The subject of making more waste will need but a brief reference. Emphatically the double circular does not make as much waste as the single circular, and more than that it does away with the necessity for a re-saw and saves the expense of men to operate the same.

In closing let me say that the Killam double circular mills will cut 75 per cent. more lumber than a single circular mill, cut the same more evenly for the above given reasons, make less waste and save the expense



The Killam Double Cutting Circular.

of a re-saw, require no more skilled men to handle than any well equipped circular mill, can be installed at a small cost and operated at small expense compared with any other double cutting mill, and requires a floor space of only six feet square.

Respectfully yours,

M. L. Killam.

RAILWAY CAR SERVICE.

Orillia, March 20th, 1903.

Editor Canada Lumberman:

Dear Sirs,—You are no doubt aware that at the present time there is a great amount of dissatisfaction among shippers generally, and among lumbermen particularly, with the way the Car Service Association is making its charges.

We all recognize the justice there is on the part of the railway companies in making some charge for undue detention of cars under load or waiting load, but they should not make charges and try to enforce payment of that charge in the arbitrary manner which they usually adopt.

There are several things which should be very carefully considered by the railway people before they try to collect car rentals, one of the principal ones being storms, both rain and snow, and in dealing with allowances to be made on that score the agent should be given quite a lot of discretionary power, or, in the absence of that the claim should be passed upon by the manager of the Car Service Association before payment is made, and thus overcome the necessity of asking the return of money which should not have been paid, and which the Association as a rule is slow to give up. If the agent were given the necessary power it appears that better results would be effected, for the reason that storms may be quite severe in a certain locality and yet be quite local.

There is yet another cause why there should be more reason used in levying demurrage charges, and which is almost entirely overlooked, and that cause arises out of the shortage of the car supply. A receiver of lumber, we will assume, has handling capacity for say five cars per day, naturally he places his order so that about that many cars would reach him in every twenty-four hours, but owing to scarcity of cars he receives only (on an average, say two cars per day, for perhaps three, four or more weeks. This would result in quite a few of that man's orders being held at the mill or mills unfilled. All at once cars become plentiful, all shippers are supplied and all ship at the same time. The inevitable results is that instead of that receiver of lumber getting five cars per day, he is apt to get many more than he can handle through no fault of his whatever, but because of the fact that he had his orders placed and was in all probability being urged by the shipper to take delivery of the goods, the reason for which being that on account of the scarcity of cars the shipper was short of bottoms in his yard and was accordingly forced to make shipment in order to make room for new lumber. Now, I have said that the Railway people, or the Car Service Association, overlook these conditions. Well, not only do they overlook them but they often refuse to consider them even when they are pointed out and proof furnished as to their existence.

By the columns of the American Lumberman of 6th of December, I see that a contract has been entered into by and between the manager of the Michigan Car Service Association and the customers of the roads in that state by which they get two days or forty-eight hours in which to load and unload all commodities excepting coal, coke, lumber, logs at Grand Rapids, tanbark, bones, glue stock, and hide trimmings, all of which will be allowed three days or seventy-two hours, and cargo and lightered lumber is to receive six days, and the average time is to rule, which is to say, that should two cars arrive on the same day and be placed for unloading or loading by noon of that day and one car is loaded or unloaded, as the case might be, before the expiration of that day, the other car might remain untouched for five days without creating any cause for car rental, as the two days' credit due on the first car would take care of the two days' overtime on the second car. We do not suppose that the railway people make money out of their cars when they are standing under load, and we know that they cannot use these same cars to supply other customers, and we believe that they would much prefer the use of the car to the $1.00 per day which is collected as car rental, for which reasons they should receive very careful consideration, but the railway people should at the same time see the matter from the position of the owner of the goods, who may have several cars under load worth anywhere from $200 to $600 per car and yet through some cause beyond his control be unable to release them. This same lumber may have been ordered weeks before to take care of certain orders. The Railway Company were short of cars, goods did not arrive, orders were cancelled which might have caused him serious loss and all through no fault of his, and it may trouble him greatly to take care of the lumber, but on top of all this if he happens to be a few days behind on one or two cars, the Association steps in and levies a charge for car rental, and thus increases a trouble which is many times of their own making.

Summing up the whole situation and giving both sides due consideration, I am sure that I voice the feeling of many, if not quite all the shippers in this district, when I say that, if an agreement could be reached between the Car Service Association and the shippers of Ontario on the same general lines which form the agreement between the manager of the Michigan Car Service Association and the patrons of the different roads in that State, it would accomplish a great amount of good and go a long way towards creating a better feeling between the Railway people and many of their customers. I would like very much to have the views of other readers who may be interested in this question. Thanking you for your space, I remain,

Yours truly,

J. H. Lavallee.

GOOD OPENING FOR A SAW MILL.

New Liskeard, Temiscaming District,
New Ontario, February 11th, 1903.

Editor Canada Lumberman:

Dear Sir, — If you know of anyone desiring to change their place of saw mill business, we have a good location here for a man having some capital to start on and a good knowledge of the business. A portable mill of thirty or thirty-five horse power with planer and shingle machine would be most suitable.

The site is six and a half miles from New Liskeard, on the corner of two main government graded roads, and it is now expected that the new railway is likely to come close to it. There is plenty of timber close by, including spruce, pine, cedar, tamarac, whitewood, etc. We have a school there and the government is going to open up a post office on 1st April and a store is to be started. There is a good demand for lumber, beside a large amount of custom work. It is really a good opening for a good man.

Yours respectfully,

E. Sackrider.

MICHIGAN'S LUMBER INDUSTRY.

(By Our Travelling Representative.)

While in Bay City and West Bay City many of the dealers were calculating upon the probable cut, this season, of Canadian pine, and whether a heavy crop of logs would have a tendency to lower prices. One dealer told me that if prices went any higher he would quit and go south for his pine. In a large number of the yards I saw plenty of hemlock and southern pine in stock, but very little Canada pine.

The firm of Mershon, Schuette, Parker & Company are at present the largest holders of Canada pine lumber in Michigan. This company is composed of W. B. Mershon, Wm. Schuette, F. E. Parker, Selwyn Eddy, S. L. Eastman and E. C. Mershon, and they are wholesale dealers in and manufacturers of white pine lumber, sash, doors and blinds, box shooks, etc., with mills and yards at Saginaw and Bay City.

Many of the members of the Michigan Retail Lumbermen's Association, after their convention in Detroit, took advantage of the invitation of Henry A. Stephens & Company to be the latter's guests in a four days' trip through northeastern Michigan lumber districts. Before the meeting adjourned the Secretary, Arthur L. Holmes, was unanimously endorsed by the association for the position of U. S. Internal Revenue Collector.

I had intended to be initiated into the mysterious lumbermen's order of Hoo-Hoo, but not having been notified, I failed to connect, much to my dissappointment. The Hoo-Hoos held their concatenation rites at 9.09 p. m. on the 9th day of the new moon, with a wealth of ceremony. Nineteen new members paid the initiation fee of $9.99 and were taxed 99 cents per year for dues. Several times, I hear, nine blind kittens were sacrificed in the ceremony, which took 99 minutes. Those who had no "middle" name were given one—a choice selection being always on hand, such as Culls, Ripsaw, Rollway, Resaw, Filer, Knots, Millrun, Shaky, Clear, etc., etc.

Long before the white man set foot in the Saginaw valley it was known to the Indians as the "land of milk and honey," and many a war was waged between the tribes for its possession. Here the red man lived and roamed the then dense forest, without care and without want. The first house was built in Bay City in 1835. The lumber industries of the Saginaw Valley had a world-wide reputation and the amount of logs, timber and lumber that has been cut there in the past runs up into billions of feet.

I saw an enormous lot of basswood and poplar bolts on the Pere Marquette Railway, which had been shipped from Graham Station to Port Huron and Saginaw firms.

From Bay City I went direct to Lansing, the capital of the state. It did not impress me as a very keen competitor of the other Michigan cities, in fact it is slow-going. However, it needs quietness for legislation, I suppose. A number of corporations have filed articles of association with the State at Lansing, among which I noticed the Grand Rapids Cabinet Company, with a capital of $100,000; the Churchill Lumber Company, of Alpena, $50,000; the Cadillac Cabinet Company, of Detroit, $100,000; and others of more or less interest to the lumbering industry.

I found Battle Creek thriving and hustling. Although this city is called "Food-town" because of its world-wide renown in the patent food line, it has other and growing industries, among which are the American Column Company and the Stenhouse Mfg. Company, both of whom are contemplating an invasion of the Canadian market. The three leading lumber firms in this city are North & Strong, L. B. Clapp and H. K. Haak, all doing a good business. A great many business men whom I conversed with were visibly impressed by the fact that over forty thousand American citizens last year crossed the Canadian frontier to permanently settle there.

I left Battle Creek in a raging storm and ran into a regular blizzard at Kalamazoo—so named from the Ke-Kenamazoo river, or "Boiling Pot," as it was called by the Indians; street cars were stalled, electricity staggered and the schools closed. The oldest inhabitant had on his "thinking cap." In the midst of it I received a hearty welcome at the offices of the Wm. E. Hill Company. This firm are extensive manufacturers of a regular and improved line of saw-mill machinery. Mr. Anthony S. Hill is the manager, and Mr. Dumont A. Shepardson the secretary, assisted by a gentlemanly and efficient staff. I predict for this company a good business in Canada in the near future. North & Coon and the Van Bochove Sons Mfg. Company, both large lumber dealers, said business was on the increase and by the appearance of their mills the fact was self-evident.

At Grand Rapids they say they are turning out as much furniture as ever, with a steady demand for all kinds of hardwood. Basswood is particularly scarce in these parts. Many pine and hardwood dealers are now getting car lots shipped direct from Canada by the smaller mill owners, and the lumbermen here say it is profitable to advertise for offers in the CANADA LUMBERMAN want columns.

Whilst in the office of Mr. Walter Clark, 535 Michigan Trust Building, I met Mr. A. H. Clemmer, of Toronto, also there on business. The former is building up a fine veneer, mahogany and oak business. Munson & Company, of Mill street, are talking of entering the Canadian field with a device for balancing planer knives. Messrs. A. H., David and Geo. Engel, whom I saw, stated that the lumbering industry was flourishing, and they were experiencing the effect of the wave of prosperity.

From Grand Rapids to Muskegon is an easy run. At the latter place I saw the enterprising firm of Mann, Watson & Company, the leading lumber dealers in the district. They will likely enter the Canadian field, and their advertisement in this issue will be of interest to our lumbermen. I also had pleasure in securing the picture of the company's planing mill, presented herewith.

At Muskegon is situated the Rogers Iron Works, whose combination edgers and siding machines are known all over the continent. In order to get through to the north I returned to Grand Rapids. Whilst there I learned that J. P. Underwood, of Chicago, and E. Mariner, of Milwaukee, had purchased two thousand acres of Louisiana timber land from Major Watson, who died many years ago in Grand Rapids. It has been discovered that the titles are defective and the estate is being sued for the purchase price, $20,000 and $6,000 expenses.

The J. F. Quigley Company, at Grand Rapids, who are large specialists in hardwood lumber, have already entered the Canadian field. Mr. Quigley is one of the best known lumbermen on this side of the line. This company's advertisement will be found in another column.

Whilst talking to one of the F. & F. Company, I learned that they would wind up their Michigan and Wisconsin business this year. The last of their limits was to be cut down this season. They held land in the upper peninsula which had cost 50 cents an acre. It is stated that Thomas Friant, of this company, at Thompson, Schoolcraft county, is one of the wealthiest men in Michigan. He was recently offered four millions of dollars for a tract of southern pine, which would have yielded him a handsome profit. When asked why he did not sell, he answered, "What would I do with that amount of money?"

Planing Mill, Lumber Yard and Dock of Mann, Watson & Company, Muskegon, Michigan.

I visited Perkins & Company, who are manufacturers of gas engines and yachts, as well as a line of wood-working machinery. Their large works on River street present a busy scene. They have built and designed specially for shallow waters a gasoline boat, which is a marvel of neatness. It is for the use of a lumbering firm near Corpus Christi, Texas, and has a draught of 16 inches. The length of this boat is 50 feet and width 11 feet. The Perkins Company are also manufacturing two towing tugs for the Central America banana trade, both using gasoline, one of 24 h. p. and one of 18 h. p. This company intend to build these launches suitable for lumbering on our Canadian streams. The framework of these boats is oak, the planking of cypress. See their advertisement in this issue.

Grand Rapids is a great center for river, logging, swamping and cruising shoes. The two largest dealers in the state are the Herold-Bertsch Shoe Company, of 507 Pearl street, and Rindge, Kalmbach, Logie & Company, of 11 Ionia street. Both these companies do an enormous business in supplying the great demands of the lumber camps. Large experience in meeting the wants of the woodsmen has brought their product to a high state of perfection, adequate to the severe requirements of the camp.

The Crane Lumber Company, of Grand Rapids and Frankfort, has been adjudged bankrupt. They were active participants in the Northern Michigan lumbering industry.

The first logging road in the United States is said to have been built in Ottawa county, Michigan, in 1856, by the Blendon Lumber Company. The engine used was one of the first that ran on the old Michigan Central and said to be the fourth ever used in the United States on a railway. This road was eight miles long and had wood rails at first. Later, the discarded strap iron once used on the wooden rails of the Michigan Southern R. R. were placed on this logging track.

The late Winfield Scott Gerrish is also credited with being the pioneer in logging railways and logging cars. He built the first one from Lake George to the Muskegon river—about two miles in length.

At Reed City I did not find much of interest, so I moved on to Evart, the headquarters of one of the largest lumber tool and handle works in the world—the Champion Tool & Handle Works. This company do an immense business and I was shown tens of thousands of handles in the process of air drying and seasoning. They have been thirty years at the business and their equipment is completely modern. In no business is a more critical test required of a working implement than in that of handling logs. The extensive works of this company are well worth a visit of inspection, and if at any time any of our lumbermen are near Evart, Mich., I would suggest a visit to this mammoth plant, where they will be well received by the courteous

First Building Erected where the City of Cadillac, Mich., now Stands.

gentlemen composing the Champion Tool & Handle Works. They are already doing a big trade in Canada, "following the lumber industry" closely.

At Evart Wm. R. Shore is the leading wholesale and retail dealer in lumber. He makes a specialty of kiln dried maple flooring, and is certainly wide-awake and up-to-date.

Cadillac used to be situated in the pine belt of Michigan, now it is really in the hardwood belt. The town, by a judicious system of bonuses or bonding, has increased wonderfully. Situated on the banks of the Little Clam Lake, it presents a beautiful appearance at all times. In 1871 this was an unbroken wilderness of pine and hardwood timber. We give herewith a cut of the first building erected where the city of Cadillac now stands.

This old historic house has held within its walls all the lumber pioneers. Cadillac was and is to-day the center of the lumber interests of Northern Michigan. Among the enterprising firms in the lumber industry are Wilcox Bros., Smith & Staples, Cummer Manufacturing Company, J. Goldie, and others who were unfortunately away when I called. Cadillac is a live town and its progressive citizens seem to be on the alert to give the place the standing it deserves. To the editor and publisher of the Cadillac News I am indebted for much information respecting the remarkable growth of this city and its brilliant future. No place that I know of has brighter prospects ahead.

The pine in this region, as elsewhere, is rapidly going, but there is considerable hemlock and hardwoods. A farmer near Traverse City cut a single elm tree which scaled 5,976 feet, for which he was paid $83.24 or $14 per thousand. Fifteen years ago $20.00 would have been a fabulous price for the same tree.

Over at Manistee on the lake shore I found the Manistee Iron Works, who are manufacturing Geo. R. Ray's patent twin engine steam feeds for operating saw-mill carriages. In this issue will be seen a cut of this wonderful machine. This company is one of the most progressive I have ever met. The testimonials they have received from the Atlantic to the Pacific testify in words of high praise the excellence of their machines.

The J. O. Batey Saw & Supply Company and the S. C. Overpack Company may enter the Canada field very shortly. They recognize the fact that the lumber industry is shifting across the border to stay.

I also had the pleasure of meeting Mr. Patrick Noud, Sr., a veteran lumberman of Manistee and a born Canuck. Mr. G. E. Anthony, who is an extensive dealer in railway supplies, intends to cater to the logging railway trade in Canada.

To get to Northern Michigan I decided to go to Ludington and crossed Lake Michigan on the fine new steel steamship "Pere Marquette No. 18." It was a winter trip and I shared it with one other passenger, a traveller for a Chicago belting firm. I took the train at Manitowoc, Wisconsin, for Menominee, Northern Michigan. At the latter place I met among others a former Canadian, Mr. J. M. Thompson, of the Wolverine Cedar & Lumber Company, and the C. J. Huebel Company, both of which are very large concerns. Here the indications were plainly evident that the pine industry had gone never to return. The deserted piling grounds, the rotting beams, told the same old tale that I had seen in the Saginaw Valley, and as in the latter district, so in Menominee, they are turning to new industries. A beet root sugar company is building a plant to cost $800,000, one of the largest in the west.

At Menominee a new scheme for the insurance rating of lumber has been introduced. Hereafter all lumber owners agreeing to insure their lumber up to 80 per cent. of its cash value, will receive a reduction of 10 per cent. from the new rate. If they make an agreement to insure up to 80 per cent. of the cash value and do not do so and then have a loss by fire they can only recover such per cent. of their loss as their insurance bears to the cash value of the property.

In one of the northern lumber camps the record for big loads of logs has again been broke, a load of pine logs containing 20,000 feet having been hauled by a single team at one of the Peshtigo Lumber Company's camps, about eighteen miles west of Wausaukee. "Dunc" Taylor is the woodsman who beat the record. The previous record had been held by "Sherin" Bush, of Crivitz, who loaded 16,098 feet of pine logs on a sleigh and with a single team hauled it a distance of over two miles without a stop.

I noticed that in the hotel where I stopped petitions were being circulated asking the State Senate and House of Representatives to pass a bill changing the railway fare on the upper peninsula roads from four to three cents a mile. This section is sparsely settled and four cents a mile seems rather excessive.

Speaking of the rapidly diminishing pine an official said: "The future of this country depends on agriculture. The iron and the copper will go the way of the forests. There are still thousands of acres of hardwood, maple, birch and hemlock, and the manufacture of flooring, etc., has got a good start." The factories at Hermansville and Crystal Falls are doing a good business. On the hardwood lands the soil is rich enough for grain growing.

Senator Moriarity, of Crystal Falls, said there was little grain growing so far in the upper peninsula. Dickson County is still putting out some spruce, pulpwood and cedar.

At Calumet, John S. Morrison, one of the heaviest operators, said the weather had been ideal for a good cut during the past winter. The contractors were skidding their logs as rapidly as possible in January and February, getting out also a large amount of sqnare timber.

In the Lake Superior copper district there has been great changes. Not long ago the mines used hardwood for fuel, cutting it right back of their boiler houses. Now the available timber is all gone and they are all using coal. North of Portage Lake the timber is pretty thoroughly cut off.

At Houghton men were so scarce there last winter that loggers had to pay the highest wages ever paid and to furnish a table that many a hotel could not furnish in order to hold the men after they had got them. As it is there has been a good deal of shifting in the camps, and various devices to hold the men resorted to. Around Cadillac and Menominee I was told there had been a floating "tramp" element amongst all the camps. Every man presenting himself was given a pass to the camps.

From Northern Michigan I went west into Wisconsin.

At the old Mason House at Clam Lake gathered the pioneer lumbermen who voted themselves into a municipality. At the first election of officers one hundred votes were cast; to reach this round number some negroes employed as laborers were permitted to put in their ballots. This was the beginning of Cadillac. The grand forest which then existed has nearly all disappeared—

"Where then grew tall the mighty pines
Is now marked off by city lines."

Logging camps on a small scale are, however, operating near Cadillac at Bunyea and Harrietta, which I personally inspected. Speaking to an old lumberman he said that when he came into the country twenty-five years ago there were no clearings north of Reed City, just the railway track through a wilderness of tall pines. The first religious meeting he attended was held over a saloon. During the summer these gatherings, when the weather permitted, were held on a scow, which was decorated with pine boughs, lighted with lanterns and towed out into the lake by a little rafting tug.

Fifteen years ago lumbermen said at Cadillac: "In five years more the pine will be gone and then your town will be dead." But still the hum of the saw mill goes merrily on, for the last of the great pine forests is being moved down the iron ways to the city.

In the hardwoods of Northern Michigan the sugar maple predominates, with soft, grey and rock elm next in quantity, then follow birch, black ash and some basswood. Red oak, white ash, cherry and bird's eye maple are scarce. The grey and soft elm is considerably sought by the stave and heading factories, whilst the rock elm is used for hames. The rock elm has taken the place of hickory somewhat in the making of cutters, buggies, etc., because it has been found to be nearly if not quite as good. In New York and points east it is known as hickory elm.

At Cadillac one of the largest mills in Northern Michigan is located, cutting timber which comes forty to seventy miles away. The pines have led the way and the hardwoods are following.

"What was the song of the dark plumed pines,
When thro' their densely glades
The bright warm smile of the morning shines,
And her fairies chased the shades?
Keep the bright blade ringing
Keep the keen axe swinging!"

Another old logger told me of the lively days gone by when the big hardy Canadian woodsman came over by the hundreds. Money flowed like water. A minstrel show came up and gave two performances to crowds of lumbermen. The show was held in an ice-house, the ice being piled up at one end to form the stage.

Cadillac has what is known locally as the "Lakeside Boulevard," being nothing less than a beautiful gravelled roadway clear around Little Clam Lake, over seven miles. The city can well support industries or manufactories which are progressive enough to reach out for the world's trade and not remain solely of local importance.

"If you have read
These pages through
And haven't read
What ads. say too,
You've missed a lot
Of business views,
Which you cannot
Afford to lose."

VIEWS AND INTERVIEWS

Much money is this spring being spent on the sawmills of Ontario to properly equip them for what is expected to be the busiest season yet experienced. Foundries are working day and night on rush orders, and everything not required immediately is laid aside in the hope of a let-up after the mills resume. A "man of the road" who recently returned from the Algoma district tells of a universal complaint by mill-men of inability to obtain machinery when wanted. They have placed orders with United States concerns, he says, and are willing to pay the duty in order to secure early delivery.

* * *

One engaged in the business took occasion to express his approval of the remarks in the February LUMBERMAN concerning the low prices obtaining for manufactured wood-work. They were especially applicable to sashes and doors. "I cannot understand," he remarked, "why some concerns continue to sell their output at such a small margin of profit. Of course prices are better than they were some time ago, but there was great need for improvement. Our policy has been to curtail production whenever we find that there is not a reasonable profit, and if other manufacturers would do likewise the trade would be in a healthier condition." Touching on this point is a letter which appears in the Liverpool Timber News. The writer, signing himself "English-American," estimates the cost of producing an ordinary house door as follows: Timber, 30 cents; Labor in work-shop, 9 cents; plant, office and incidental expenses, 25 cents, a total of 64 cents. The market price of the door he places at one dollar, leaving a margin of 36 cents as the manufacturer's profit. It strikes me that the above cost of production is underestimated, as it is extremely doubtful that, even with our improved machinery, a finished door of average quality can be turned out for much less than one doller.

* * *

The writer was lately accorded the privilege of meeting a gentleman who for nearly half a century has been connected with the lumbering industry. This gentleman was Mr. Isaac N. Kendall, millwright, of Ottawa known in all parts of the Dominion as a peer among the builders of saw mills. Recently he has been associated with Louis Miller & Company, a Scotch concern which has located limits and erected mills in Newfoundland. As a millwright Mr. Kendall has been afforded ample opportunity to witness the saving in timber that can often be effected by economical sawing. He is a strong advocate of the use of thin saws and contends that in this respect the Swedes have distanced us very noticeably. Some Swedish machines have been introduced in this country and have been found to give good results. "Within ten years," said Mr. Kendall, "twice as much lumber will be manufactured from small logs with a given number of men as is produced to-day, and this result will be brought about by the introduction of new machines and the employment of thinner saws for slabbing and other purposes. I look for wonderful changes in the sawmilling business in the next few years." Mr. Kendall then drew my attention to the reference to the Rodgers' log siding machine which appeared in the February LUMBERMAN. He pointed out that the William Hamilton Company, of Peterborough, Ont., have been manufacturing a similar machine for twenty years, and with splendid success. It has on different occasions sided 2,200 sixteen-foot logs in eleven hours, many of the logs passing through the machine a second time to take off a siding. He believes it to be equal to anything of the kind on the market.

Mr. John Layton, of Shubenacadie, N. S., has recently sold out his lumber business at that place to Messrs. Holman & Johnson. Mr. Layton intends removing to California.

The Dodge Manufacturing Company, of Toronto, have issued the third edition of their B6 catalogue. It is a most complete work. Besides illustrating and describing their general line of power transmission machinery, many useful rules and tables are given, such as table of circumference and area of circles, weight table of round and square iron, etc. In the front of the book is shown a view of their new works at Toronto Junction, the largest plant in Canada devoted exclusively to the manufacture of power transmission machinery.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 28 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. IX. TORONTO, CANADA, APRIL 1, 1903 No. 9

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING MONTREAL
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Month'y Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED.—FIFTEEN LUMBER LORRIES, standard guage, also lath mill and bolter. THE DICKSON CO., Peterborough.

WANTED—A BURNER FOR SAW-MILL, about 24 ft. in diameter, by 40 ft. high, must be in good condition. Apply P. O. Box 23, Hamilton.

FOR SALE — LARGE QUANTITY BIRCH and Hemlock; can be cut to order at short notice. CLARIDGE & HILLOCK, South River, Ont.

WANTED—150,000 FEET OF 1 IN. SOFT Elm, log run, mill culls out, any lengths and any widths; would buy it either green or dry. Quote f. o. b. nearest station. Address, H. BOURGOUIN, 71a St. James Street, Montreal, Quebec.

WANTED—A POSITION AS MANAGER OR Superintendent, with a Lumber Company. Have a thorough knowledge of the lumber business, logging, sawing and shipping; speaking English and French. Address, 480 Temple Building, Montreal.

FOR SALE

TIMBER LIMITS, SAW MILL, SHINGLE Mill, Lath Butter and Edger, in perfect order, one and a quarter million feet of sawed lumber, one hundred thousand shingles, 1,000 ties 30,000 lath, logs and other timber, 10 horses, waggons, sleighs, residence, shanties, shanty supplies. Everything for a perfect run Mill, close to railway, lots of timber. Price $45,000 for the whole. T. W. MCDERMOTT, Room 16, Trust Building, Ottawa, Ont.

HARDWOOD LUMBER WANTED.

3-inch Common and Better Soft Elm.
2-inch 1's and 2's Soft Elm.
Also all grades Ash, Basswood, Birch and Elm. Send us list of any hardwood lumber you have for sale.

BRIGGS & COOPER CO., LIMITED,
Saginaw, Mich.

FOR SALE

VENEERS—SINGLE PLY OR GLUED UP stock. INTERNATIONAL LUMBER CO., LIMITED, Sault Ste. Marie, Ontario, Canada.

WANTED, GOOD CIRCULAR SAWYER, one that can take care of his own saw. State wages, age, and how soon you could come. M. BRENNAN & SONS MFG. CO., Hamilton, Ont.

LUMBER WANTED

FOR EXPORT DURING THE SEASON OF 1903, 40 to 50 carloads of 1" Soft Elm Lumber suitable for coffin boards stock. Will pay spot cash at any station in Canada. For prices and specifications address J. S. FINDLAY, Owen Sound.

WANTED—WE ARE ALWAYS OPEN TO contract for all kinds of hardwood lumber. Please state price F. O. B. your nearest station, quantity and quality of the different kinds you will have to sell during 1903. We also require a large amount of Dimension stuff, particulars of which will be furnished, on application, by the KNECHTEL FURNITURE CO., of Hanover, Ont.

LIMIT FOR SALE

A TOWNSHIP WITH GOOD RED AND White Pine. About 50,000 Logs now cut and a portion hauled. Mill on the ground. Best shipping facilities. Location on C. P. R. main line. PINE LUMBER COMPANY, Cartier, Ont.

TELEPHONE POLES FOR SALE

WE HAVE IN STOCK AND READY FOR shipment a large number of Cedar Poles in all lengths from 25 to 60 feet. Prices quoted on car lots f. o. b. here, or delivered at points required. GEORGE MCGREGOR, Killaloe Station, Ont.

FOR SALE

15,000,000 feet White Pine Lumber. 5,000,000 White Pine Lath.
A large portion of same is Cork Pine.
About 5,000,000 feet lumber already sawn and on sticks.
About 500,000 Laths already manufactured.
Mill now running. Location Sault Ste. Marie, Ontario.
22 feet water at loading dock.
For full information apply to the

Address HOLLAND & GRAVES, Buffalo, N.Y.

CURRENT TRADE CONDITIONS.

ONTARIO.

For some time it has been freely predicted that lumber prices would experience no recession before midsummer at the earliest, and that the strength of the market might continue throughout the year. Recently natural conditions have combined to strengthen this view. The most important of these conditions, perhaps, is the early break-up of winter and the consequent cessation of logging operations. In the Georgian Bay district large quantities of logs have been left on the skids, one firm alone having five million feet thus hung up. It is estimated that there will be an average shortage from this cause of 10 per cent. from the output calculated on for the season, while the possibility of a further shortage through low water for driving purposes has still to be reckoned with. The early spring created a larger demand than usual for lumber during March, and stocks are now running low, some grades and sizes of white pine being almost out of the market. A few mills which carried logs over are already resuming operations, but the product will not be in shipping condition for at least two months. In the meantime dealers are finding difficulty in filling orders, which are daily increasing. As might be expected under such conditions, prices are irregular. Where a buyer finds a quantity of a certain grade of lumber which he is actually in need of to supply a customer, he usually accedes to the demands of the seller, even if his price is above the market quotation. There is, however, no desire on the part of the lumber trade to advance prices to an abnormal basis, although conditions alone may bring this about.

Several orders have recently been placed for box lumber, which is scarce in the Eastern States. Manufacturers are asking $13 at the mill for 1x10 box and mill culls, $14.50 for 14 inch, and $13.50 for 1½x12 inch. An improvement in the demand for Norway lumber is reported. Common and dressing, 2x6 and 7 inch, brings $13.50 at the mill, and 2x8 inch $15 for 12 to 16 foot lengths. For 10 and 12-inch $16.50 is asked.

The hardwood market has been a repetition of past weeks. There is good buying wherever dry stock can be located and no small amount of contracting for the future cut. Mill run maple and birch are held around $16. There are no signs of weakness on account of the approach of the sawing season.

QUEBEC AND NEW BRUNSWICK.

A noticeable improvement in the spruce lumber market is reported. Manufacturers are receiving numerous inquiries for stock. A heavy demand from South America has offset the slight falling off in British trade. Deals have brought as much as $14 alongside ship for a specification of fifty per cent. 7 and 8 inch and fifty per cent. 9 inch and up. There has been an advance of about $2 per thousand in the price of spruce clapboards for shipment to the Eastern States. Local trade is also picking up. It is said that the yards have not been so bare of stock in twenty years. Box shooks find a market as readily as manufactured. Shingles are exhibiting more activity, and with this activity has come a slightly better tone to the market. While sales of extras for Boston delivery are still reported as low as $3.35, all the large manufacturers are refusing to contract below $3.40, and some sales are said

to have been made at $3.45. The conditions would seem to be in favor of higher prices for shingles.

MANITOBA AND BRITISH COLUMBIA.

Lumber manufacturers and dealers catering to the North-West market are experiencing some difficulty in meeting the demand for lumber. Not that there is an inadequate supply, but with the early spring has come a rush of orders for immediate shipment which is taxing the capacity of the yards to handle. Car shortage is still a serious drawback. Manufacturers have many orders on their books for lumber and shingles, and if it had been possible to secure cars for making shipments, they would now be in much better position to cope with the spring trade. From the standpoint of orders and prices no complaint can be made. Business is good, with indications of the best year yet experienced. The pending labor difficulties at Winnipeg and Vancouver will, it is believed, be satisfactorily settled at an early date, and there will then be removed almost the only obstacle to an active building season.

UNITED STATES.

The tone of the lumber market has seldom, if ever, been stronger than at the present time. From all sections of the country come reports of increasing business, from which it is concluded that the high price of lumber is not affecting building operations. Stocks in the east are very light, but promise to be augmented in the near future upon the opening of navigation. Box lumber and mill culls lead in point of demand throughout the Eastern States, and some dealers have recently marked up prices to a still higher basis. In the Lake Superior district No. 3 and better lumber is being sold at from $18 to $18.50, which would make this class of stock $21 for Chicago delivery. There is no dry piece stuff and much of that to be cut the coming season has been contracted for. The opening price by cargo is based on $16.50 for No. 1 short dry pine piece stuff, Chicago delivery. Hemlock continues strong, the Wisconsin manufacturers having adopted a new list making a material advance on several items. Similiar action was taken by the Wisconsin manufacturers of hardwood lumber. The new list will be found in another column. The conditions of trade are such that there is no price cutting but a very general disposition to adhere to the list. The quantity of hardwood logs taken out the past winter has not been large and it is estimated that more than one-half of the production has already been placed under contract. Thick maple and basswood are scarcer than other lines.

GREAT BRITAIN.

The British market is exhibiting a more cheerful tone and representatives of Canadian shippers have succeeded recently in placing considerable stock. There is an increasing inquiry from the East Coast for spruce deals. This is owing to the high prices asked for Baltic whitewood. An ordinary specification of 60 to 65 per cent. of 7 and 8-inch spruce is selling at £7 10s c.i.f. West Coast ports, and for small cargoes of the same specification £7 15s has been paid. Consumption is more active, which is regarded as a favorable indication on account of the probability of an early opening of navigation. Holders of stock are seizing every opportunity to reduce their supply so as to be in a position to receive new shipments, but notwithstanding this fact prices have been maintained and in some cases advanced. A quantity of first quality Quebec pine, 2 x 8 inch, brought £22 10s at a recent public sale. Waney pine is exceedingly firm. Belfast importers have contracted on the basis of 3s 9d per foot c.i.f. for 18-inch. This, so far as can be learned, is the maximum figure that has yet been paid.

STOCKS AND PRICES.

Carnweth's steam mill has finished sawing 250,000 feet of lumber at Memel, N.B.

The barque Avonia is loading deals at Hopewell Cape, N. B., for the United Kingdom.

J. L. Scott & Son, of Chatham, Ont., recently purchased 20,000 cedar posts for the spring trade.

The Moyie Lumber Company, of Moyie, B. C., expect to have 10,000,000 feet of logs to supply their mills during the coming season.

The lumber clearances from St. John, N.B., for the United States for the week ending March 21st included 1,168,000 feet of long lumber, 4,000,000 lath, and 425,000 shingles.

It is understood that Harold Kennedy, of Quebec, who has recently been in England, has placed his season's output of birch timber with Joseph Owen & Sons, Limited, of Liverpool.

Revelstoke citizens are staking out 90 miles of timber locations under special licenses in the Big Bend country. This is the largest tract of timber land ever taken up under special license.

The Alex. Gibson Railway & Manufacturing Company, of Marysville, N.B., have finished logging operations on the Nashwaak river. The cut has been in the vicinity of 30,000,000 feet. As the ice is already out of most of the tributaries of the Nashwaak, stream driving will be commenced in a short time.

Under date of March 14th Messrs. Clairmonte, Man & Company say of the Barbadoes market: "We have had no arrival with lumber during the fortnight. Our yards are still barely supplied, and during our reaping season, now going on, there is always a good demand. Prices are as follows: White pine, $26 for first quality and $21 for second quality; spruce, $22.50 for first and $19.50 for second quality. Last sales of Gaspe long cedar shingles were made at $4.89 to $5.04, but they are now worth more. Cedar laying shingles are worth $1.82 and spruce laying $1.65 to $1.70."

It is estimated that the cut of logs on the south branch of the Oromocto river, in New Brunswick, this winter was in the neighborhood of 6,000,000 feet. Smith Bros. have got about three and one-half millions, which they will manufacture at their own mill, and about 1,500,000 has been cut for John E. Moore, of St. John. Hilyard Bros. have about 1,500,000 at French Lake, which will likely be manufactured at St. John. W. J. Scott, who operates for Murchie & Sons, at Deer Lake, has finished his season's work in that locality. The recent soft weather ruined the hauling and he was obliged to leave 1,700 pieces in the woods.

The Northwestern Hemlock Manufacturers Association of Wisconsin have adopted a new price list effective March 30th, by which the price of hemlock lumber has been advanced. For No. 1 hemlock boards the prices are: 3x8 in., 10 feet, $14; 12 and 14 feet, $13; 16 feet, $13.50; 18 and 20 feet, $14; 22 and 24 feet, $15.50; 3x10 in., 10 feet, $14.50, 12 and 14 feet, $13.50; 16 feet, $14; 18 and 20 feet, $14.50; 22 and 24 feet, $16; 3x12 in., 10 feet, $15.50; 12 and 14 feet, $14.50; 16 and 18 feet, $15; 20 feet, $15.50; 22 feet, $17; 24 feet, $17.50; 4x4 to 8x8 in., 10 feet, $14; 12 and 14 feet, $13; 16 feet, $13.50; 18 and 20 feet, $15.50; 22 and 24 feet, $16.50.

NEW HARDWOOD PRICE LIST.

The following prices of hardwood lumber have been fixed by the Wisconsin Hardwood Lumbermen's Association, f. o. b. Wausau and effective March 25th:

Ash.—1st and 2nd: 1-in., $32; 1¼ and 1½ in., $34; 2-in., $35; 2½ in. and thicker, $40. No. 1 Common: 1-in., $22; 1¼ and 1½ in., $23; 2-in., $24; 2½ in. and thicker, $26. No. 2 Common: 1-in., $11; 1¼ and 1½ in., $12; 2 in. and thicker, $12. No. 3 Common, all grades, $6; 1-in. log run, No. 3 Common out, $20.

Basswood.—1st and 2nd: 1, 5 and 11 in., 8 to 16 feet, $30; 12-in., $35; 13-in. and wider, $36; 1¼ and 1½ in., $32; 2-in., $34. No. 1 Common: 1-in., $22; 1¼ and 1½ in., $24; 2-in., $25. No. 2 Common: 1-in., $14; 1¼ to 2 in., $15. No. 3 Common, all sizes, $10; 1-in. box Common (No. 2 and 3 mixed,) $13.

Birch.—1st and 2nd: 1-in., $28; 1¼ and 1½ in., $30; 2-in., $32; 1-in. red, $38; 1¼ to 2-in. red, $40; 2½ in. and thicker, red, $42. No. 1 Common: 1-in., $18; 1¼ and 1½ in., $20; 2-in., $22; 1-in. red, $28; 1-¼ to 2-in.; red, $30. No. 2 Common: 1, 1¼, and 1½ in., $10; 2 in., $12; red, all sizes, $14; 1-in. log run, No. 3 Common out, $18.

Soft Elm.—1st and 2nd: 1-in., $26; 1¼ to 2-in., $28; 2½ in. and thicker, $30. No. 1 Common: 1 in., $16; 1¼ to 2-in., $18; 2½ in. and thicker, $20. No. 2 Common, $10. No. 3 Common, $8. Inch log run, No. 3 Common out, $16.

Rock Elm.—1st and 2nd: 1 to 2-in., $30; 2½ in. and thicker, $34. No. 1 Common: 1 to 2-in., $18; 2½ in. and thicker, $24. No. 2 Common, $12. No. 3 Common, $6.; 1 to 2-in. log run, No. 3 Common out, $18.

Hard Maple.—1st and 2nd: 1-in., $23; 1¼ and 1½ in., $25; 2-in., $25; 2½ in. and thicker $27. No. 1 Common: 1-in., $13; 1¼ to 2-in., $15; 2½ in. and thicker, $16 No. 2 Common: 1 to 2 in., $8; 2½ in. and thicker, $12. No 3 Common, $5; 1 to 2 in. log run, No. 3 Common out, $13.

Soft Maple—1 in. to 2 in. log run, No. 3 Common out, $14.

Red Oak.—1st and 2nd: 1-in., $39; 1¼ to 2-in., $42; 2½ in. and thicker, $48. No. 1 Common: 1-in. $29; 1¼ to 2-in., $32; 2½ in. and thicker, $38. No. 2 Common: 1-in., $19; 1¼ to 2 in., $22; 2½ in. and thicker, $28. No. 3 Common, $9.

White Oak.—1st and 2nd: 1-in., $37; 1¼ to 2-in., $40; 2½ in. and thicker, $46. No. 1 Common: 1-in., $27; 1¼ to 2 in., $30; 2½ in. and thicker, $36. No. 2 Common: 1-in., $17; 1¼ to 2 in., $20; 2½ in. and thicker, $26. No. 3 Common, $8.

SHIPPING MATTERS.

The steamer Brooklyn has been chartered by Clarke Bros. to load lumber at Digby and Bear River, N. S., for the West Indies.

The following charters are reported: Steamer Carman, Pugwash, N. S., to w. c. England, deals, 36s, May-June loading; Barque Globus, Yarmouth, N. S., to Buenos Ayres, lumber, $8; Robert Scrofton, Bridgetown, N. B., to Buenos Ayres, lumber, $8; Valuta, Campbellton, N. B., to Buenos Ayres, lumber, $8; Leviathan, Tusket, N. S., to Buenos Ayres, lumber, $7.75; Phyllis, St. John, N. B., to Buenos Ayres, lumber, $7.75.

The Board of Managers of the Lumber Carriers, in executive session at Detroit on March 24th, fixed its season carrying charges and decided upon the policy of the organization during the coming season. On the main, the lumber carrying rate will be about the same as it was last season, with the exception of hemlock. This was increased materially.

For the purpose of facilitating the work of making differential rates between the various points, the lakes were divided into eight sections and the carrying charges fixed as follows:—

Section No. 1—From the head of the lakes to Keweenaw Point, to Chicago and Lake Erie ports, pine, $2.50 per 1000 feet.

Section No. 2—From Keweenaw Point to Whitefish Point, to Chicago and Lake Erie ports, pine, $2.25 per 1000 feet.

Section No. 3—Whitefish Point to Detour, to Chicago and Lake Erie ports, pine $2 per 1000 feet.

Section No. 3—From Straits of Mackinaw, including Lake Huron and Georgian Bay, to Chicago and Lake Erie ports, pine, $1.75 per 1000 feet; hemlock 25 cents extra.

Section No. 5—North end of Lake Michigan to a line drawn from Green Bay to Traverse City, to Lake Erie, $2 per 1000 feet.

Section No. 6—Including the balance of Lake Michigan to Chicago, to Lake Erie, $2.12½ per 1000 feet; hemlock, 25 cents additional to above rates; hardwood, 75 cents per 1000 additional.

Section No. 7—To Oswego, 75 cents additional over Tonawanda rates.

Section No. 8—Including Ogdensburg, $1 over Tonawanda rates.

From district No. 1 to Bay City, pine, $2.25. Timber 6 x 6 to 8 x 10 to pay 25 cents per 1000 over pine rates; 10 x 10 and larger timber, 50 cents per 1000 feet extra over board rates.

Separate rates were made from St. Ignace and Cheboygan to Chicago. They were $1.75 on dry white pine; $1.87½ on green and 12½ cents additional over above rates on hemlock. Basswood same as hardwood, 50 cents over pine rate.

No action was taken in regard to the time of starting out, although all members present favoured a late start. But few of the owners of lumber tonnage have started to fit out, and it will probably be the middle of April before they get under way in full swing.

AUSTRALIAN TARIFF ON LUMBER.

The customs tariff of the Commonwealth of Australia, assented to September 16th, 1902, specifies the following duties on timber and wood-work:

Furniture n. e. i. (except metal) in parts or finished, including billiard and bagatelle tables and boards and accessories, photograph frames and stands for pictures, picture frames (on pictures or otherwise), and picture mouldings, cabinets, brackets, trays, verandah blinds, screens, show figures for draping or other purposes, writing and stationary cases, writing desks and mirrors, framed or set, ad val. 20 p.c.

Timber, viz: — Architraves, mouldings and skirtings of any material, per 100 lineal feet, 5s.; Timber, dressed, n. e. i., per 100 super. feet, 3s.; Timber, undressed, n. e. i., in sizes of 12 in. x 6 in. (or its equivalent), and over per 100 super. feet, 1s.; Timber, undressed, being Oregon, in sizes of 12 in. x 6 in. (or its equivalent) and over, per 100 super. feet, 6d.; Timber, undressed, n. e. i., in sizes of 7 in. x 2½ in. (or its equivalent) and upwards, and less than 12 in. x 6 in. (or its equivalent) per 100 super. feet, 1s. 6d.; Timber, undressed, n. e. i., of sizes less than 7 in. x 2½ in. (or its equivalent) per 100 super. feet, 1s. 6d.; Laths, per 1,000, 5s.; Palings, per 1,000, 15s.; Pickets, dressed, per 100, 4s.; Pickets, undressed, per 100, 1s.; Shingles, per 1,000, 3s.; Doors of wood—1¾ in. and over, each 7s. 6d.; over 1½ in. and under 1¾ in., each 5s.; 1½ in. and under, each 3s. 6d.

Wicker, bamboo, cane, or wood—all articles, n.e.i., made of, whether partly or wholly finished, including bellows, casks, shooks, sashes, and frames, timber, bent, n.e.i., wood cut into shape and dressed or partly dressed for making boxes or doors, walking sticks and canes, ad val. 20 p. c.

Axe and other unattached tool handles, ad val. 15 p.c.

GILMOUR & COMPANY, LIMITED

TRENTON, CANADA

THE BOSTON MARKET.

Spruce lumber is firm at Boston, with an improved demand. There is some call for lumber for prompt delivery. The situation in the East is somewhat mixed, but high prices seem likely for lumber even if the cut of logs proves to be larger than at first reported. The quotations in this market are firm and unchanged at : Ten and 12-inch dimensions,$21; 9-inch and under, $18.50 to $19 ; 10 and 12-inch random lengths, 10 feet and up, $20.50 ; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50 ; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50 ; 5-inch and up, merchantable boards, $17 ; matched boards, $18 to $20 ; out spruce boards, $13 to $14 ; bundle furring, $17.

There is no change to note in hemlock lumber, the market being firm with a quiet demand : Boards, 12, 14 and 16 feet stock, $14.50 to $15 for good eastern ; Pennsylvania, No. 1, $18.50 to $19.50 ; No. 2, $15 to $16.50.

Western pine continues very firm, with only a small supply offering and a good demand: Uppers, 1 to 2 inch $84 to $87; 2½ to 3 in. $92 to $97 ; 4-in. $96 to $100 ; selects, 1 in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78 ; 2½ to 3 in. $84 ; 4 in. $86 ; fine common, 1-in. $67 ; 1¼ to 1½ in. $69 ; 2-in. $72 ; 2½ to 3 in. $80; 4-in. $82 ; barn boards, $23 to $33 ; coffin boards, $28 to $32.

Whitewood holds very firm, though no further advance is noted ; quartered oak is also firm with an active demand : Quartered oak, $75 to $83 ; plain oak, $45.00 to $47.00 ; common and rejects, $20 to $25 ; red oak, plain, $43 ; whitewood, $54 to $60; sap, $43 to $48 ; common, $38 to $45 ; brown ash, $41 to $44 ; white ash, $43 to $46 ; maple, $33 to $37 ; end-dried white maple, $46 ; birch, $27 to $30 ; birch, 75 per cent. red, $45 to $50 ; elm, $34 to $37.

Shingles are slightly firmer with a good demand : Extra cedar at $3.40 to $3.45; clear, $2.90 to $3.00 ; second clear, $2.30 to $2.40 ; extra No. 1, $1.75 to $1.80 ; British Columbia red cedar, 16-inch, five butts to 2 inches, $3.50 to $3.60 ; 18-inch, five butts to 2 inches, $4.25 ; five butts to 2¼ inches, $4.50.

Spruce clapboards are firm, with prices advanced. The demand is good, but the supply is still light : Extra, $45 ; clear, $43 ; second clear, $40 ; extra No. 1, $30 to $33.

Laths are firm and higher: One and five-eighths inch, $3.25 to $3.45 ; 1½-inch, $3.10 to $3.25.

WANTED

LUCAS, STEELE & BRISTOL,

HAMILTON, ONT.

PERSONAL.

THE LUMBERMAN regrets to record the death, from Bright's disease, of Mr. James T. Barnard, of Hamilton, secretary-treasurer of the Hart Emery Wheel Co.

The death occurred recently at Fredericton, N. B., of Mr. William R. Turner, who had been a lumber surveyor for a number ot years.

Mr. L. Kennedy, travelling representative of Warnock & Company, Galt, Ont., has been appointed manager of the Dowsley Spring and Axle Works, of Chatham.

Mr. E. Letherby, of Midland, Ont., left early in March on a trip to British Columbia, where he will inspect the operations of the Ontario-Slocan Lumber Company.

Mr. Frank Early, formerly contractor to the Pembroke Lumber Company, has been engaged to represent the Waterous Engine Works Company, of Brantford, in South Australia.

Mr. E. H. Lemay, the well-known lumber merchant of Montreal, sailed from New York for Great Britain early in March. He expects to be absent about four months and will visit Southern Italy, Germany and France.

Official notification has been given of the appointment of Mr. W. L. Griffith, Canadian government agent at Cardiff, Wales, to succeed Mr. J. G. Colmer as Secretary of the High Commissioner's office in London, Eng.

Dr. A. H. Unwin, of London, Eng., has been appointed scientist to the Forestry Branch of the Department of Interior. Dr. Unwin is an Englishman by birth, but was for many years on the Continent studying forestry.

Mr. W. C. Edwards, M. P. for Russell and head of the large lumber concern of W. C. Edwards & Company, with mills at Rockland and New Edinburgh, Ont., has been appointed to the Dominion Senate in succession to the late Senator Clemow, of Ottawa. Mr. Edwards has been in the Commons since 1897.

As previously announced, Mr. Fred Robinson, of Revelstoke, B. C., has disposed of his lumber interests at that place. It is learned that Mr. Robinson will visit the Southern States for a short time and afterwards settle down at his old home in Keswick, Ont., where he still has considerable interests. In recognition of the esteem in which he was held, the fellow-citizens of Revelstoke and his employees presented him with a handsome diamond ring.

The late Mr. J. A. Duff, whose death took place at Cookstown on February 13th, was greatly interested in the investigation of Canadian timber from the standpoint of the engineer. He graduated from the School of Practical Science in 1890, and was devising a systematic course of research and instruction in timber physics along similar lines to those successfully carried out by the late Professor J. B. Johnson, of Wisconsin University. He spent the summer of 1900 in Algonquin Park examining the conditions of growth of the pine timber and selecting trees for examination in the School of Science. Unfortunately, owing to the state of his health, he was obliged to discontinue this work.

Have YOU seen or are YOU using the

SLEEPER PATENT ENGINES for Steam Feeds for Saw Carriages?

THEY { Reverse instantly, at any point, without special gear.
Are always under instant control.
Run without noise or vibration, and at very high speeds.
Are strong, rigid, and extraordinarily light, compact and portable.
Can be installed in almost any conceivable position.
Require no adjustment and very little attention.
Are the very latest, the very best, and by long odds the most economical engine on the market.

We also manufacture engines for every description of service, and of all powers. Direct-connected electrical units and small engines for general lumber and agricultural service are specialties of ours. Catalogs and prices upon application.

The **SLEEPER ENGINE COMPANY,** Limited, **Montreal.**

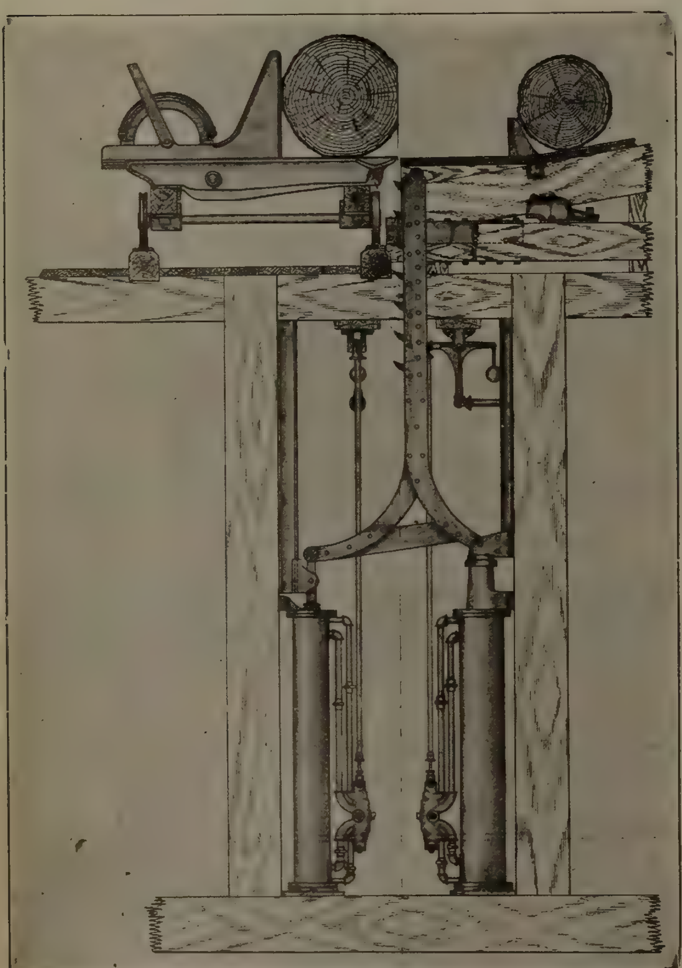
THE HILL STEAM NIGGER.

On another page of this issue will be found the advertisement of Wm. E. Hill & Company, the famous manufacturers of heavy saw mill machinery, of Kalamazoo, Michigan. They have most fittingly chosen for the subject of their initial advertisement their steam nigger or log turner.

This machine is undoubtedly one of the greatest money makers and money savers ever put into a mill, and it has done much to facilitate the handling of lumber in the mill. Wm. E. Hill, the founder of this company, was the inventor of the machine and lived to see it in seventy-five per cent. of the mills of the United States as well as in a goodly number of Canadian mills.

As the bulk of Canadian mill men are, however, but little acquainted with the merits of the truly wonderful machine, we have deemed it advisable to print a short description of the steam nigger for their benefit.

As may be seen from the cut, the machine consists, roughly speaking, of a toothed bar which is raised and lowered by two steam rollers. Its functions are not only to turn logs but to act as a log loader, hand spiker and straightener of long timber as well. A competent sawyer can handle a log or even a board exactly as he wants to, and with ease and rapidity place the log or board in any desired position. All this is accomplished by means of one lever, which is so arranged that by giving it a circular movement steam can be given to either cylinder or both at once if desired. If you wish to roll a log from deck to carriage you move the lever in the direction you wish tooth bar to go until the bar is back of the log, then by reversing the lever and admitting steam into the bottom of the large one and top of small one, the bar is moved forward and upwards, forcing the log before it and placing it on the carriage. Then by admitting more steam to both cylinders the log can be turned to any desired position. The teeth in bar are of a peculiar shape and, it is claimed, will not mar the lumber. They are hinged and, as the bar comes down, recede between the sides, or if they hit the cant or board their shape causes them to recede without marring the face of the stick.



THE HILL STEAM NIGGER.

One of these machines will, it is claimed, increase the cut of any mill from 3,000 to 5,000 feet per day and do away with two or three men now required to load and turn logs, and the sawyer can do all that work easier and quicker without additional expense.

These machines are not some new experiment, but a machine that has stood the test of years and one of established reputation.

Wm. C. Hill & Company have the best equipped works for turning out heavy band mills complete, and are prepared to furnish complete plans and estimates for any who contemplate going into the saw mill business. Persons interested in saw, shingle, lath or pulp mill machinery should write for catalog B, whih contains full description of their entire line. Their address is 415 North Rose street, Kalamazoo. When writing kindly mention CANADA LUMBERMAN.

WELL PLEASED WITH "AD."

The Hanchett Swage Works, of Grand Rapids, Mich., who recently inserted an advertisement in the CANADA LUMBERMAN, write: "So far we are well pleased with the "ad." in your paper, having had quite a number of enquiries and several orders which we credit you for."

TWIN ENGINE STEAM FEEDS.

There has been considerable talk about Geo. R. Ray's patent twin engine steam feeds, manufactured by the Manistee Iron Works Company, of Manistee, Mich. This enterprising company are now building these feed engines in two styles, the parallel style and the angular style. The parallel style is designed to be placed directly under the carriage, and is a very simple, compact and durable machine. Its two main valves are worked by lever connection from the crosshead of opposite engine, after the manner of a duplex pump, thus doing away with the necessity for eccentrics. This enables them to bring the two cylinders near together, making a narrow engine that goes in between the track timbers, besides shortening the steam passages between the central reverse valve and the main valves.

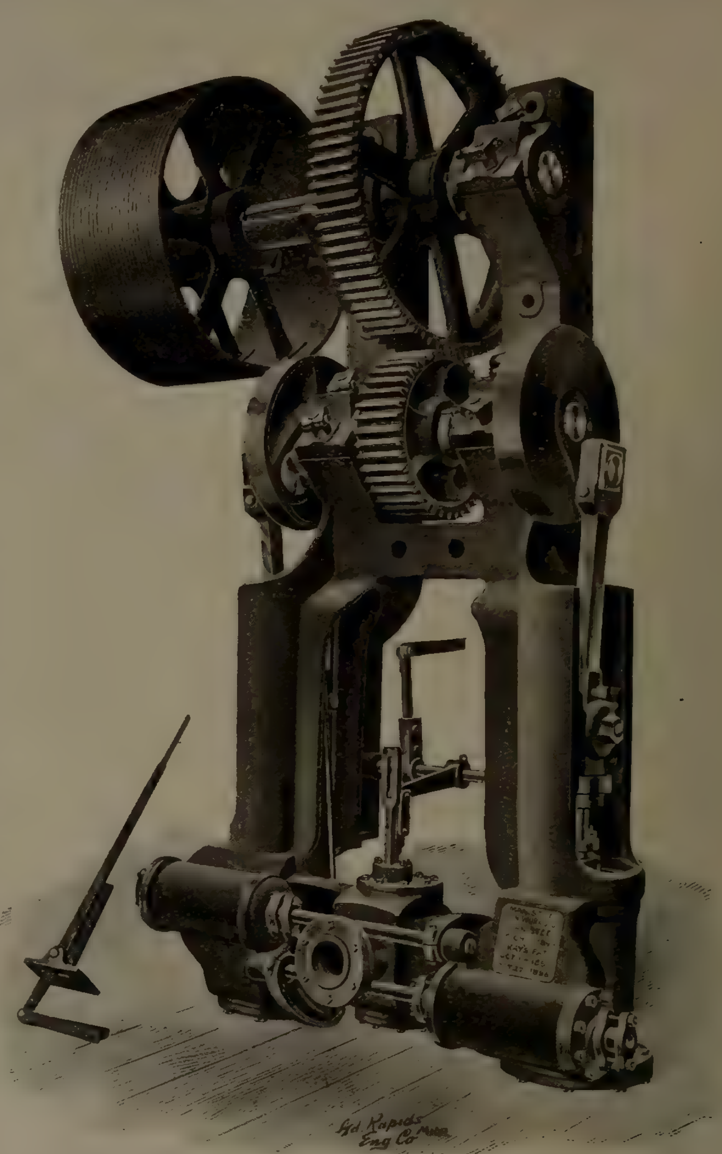
The angular style is designed to be set out from under the carriage, leaving that space clear for main refuse conveyor from log deck. It can be placed either between the side of the mill and the carriage, or if space is limited it can be placed outside the mill frame, the crank shaft being made of any length desired to suit the position. The tail end of crank shaft is carried in two heavy bracket boxes which rest on top of the floor timbers, the engine frame being bolted up to the underside of these timbers. Preventer rollers are carried on these tail boxes, one on each side of the pinion, in mesh.

The cylinder, steam chest, slides, and boxes are cast all in one piece so there are no parts to get out of line and no main joints to blow out.

The main valves are plain rolling valves, held to their seats by flat springs between valve stem and back of valve, to prevent leakage of steam. The central reverse valve is a simple plunger valve, one end being serrated so the admission of steam while feeding can be regulated as desired, and the other end straight so as to let in full steam quickly for gigging. When this valve is pushed down by the sawyer's lever the engines run one way, and when it is pulled up they reverse instantly.

Louis Sands' mill at Lake City with a 14 x 16 feed has cut as high as twenty-four sixteen foet boards per minute.

The company guarantee that theirs is the quickest feed in the market. The largest day's cut yet made with a band mill, they claim, was made with one of their feeds, and we give below the result of time taken carefully on a few logs cut at the Buckley & Douglas circular mill, while doing regular sawing, and on a comparatively slow day; they use one 12 x 12 feed. The time is given in seconds:



GEO. R. RAY'S TWIN ENGINE STEAM FEED.

Speed gigging 650 ft. per minute.			12 x 12 timber left. 900 ft. travel in 1¾ minutes. 600 ft. board measure in 2 minutes. Speed sawing 400 ft. per minute. Speed gigging 675 ft. per minute.		

The total cut in ten hours, two days before the above was taken, was 138,000 feet for the two sides together.

The Victoria Foundry Company, of Ottawa, are supplying the large pulley wheels for the Fraser Lumber Company's new saw mill at Deschenes, Que. They have secured the contract for shafting for J. R. Booth's new pulp mill at the Chaudiere.

THE NEWS

—Cushing Bros. have opened a lumber yard at Fort Saskatchewan, N.W.T.

—S. C. Smith has removed his sash and door factory from Vernon to Enerby, B. C.

—Blackadar Bros., of Meteghan Station, N. S., are building a new saw mill.

—A British Columbia charter has been granted to the McNab Lumber Company, Limited.

—McLaren's saw mill at Frank, N.W.T., is being increased to a daily capacity of 40,000 feet.

—The East Kootenay Lumber Company have just completed a new saw mill at Meadow Creek, B. C.

—Fusee & McFeetors have purchased the planing mill of Wakefield & Kellington at Neepawa, Man.

—James Babstowle, of Ferndale, B.C., is considering the erection of a saw and shingle mill at Vancouver.

—The Rat Portage Lumber Company have decided to open a sash and door warehouse at Regina, N.W.T.

—Holland, Graves, Manbert & George, of Buffalo, are building a planing mill on Hertel avenue in that city.

—J. T. Scanlan, of Nelson, B. C., is building a new shingle and lath mill at Salmo, to cut for the North-West trade.

—The Royal City Mills Company, of New Westminster, B.C., will erect a shingle mill on the old Mud Clay claim.

—The Pearce Company, of Marmora, Ont., are making improvements to their saw mill and installing a new water wheel.

—The Yale-Columbia Lumber Company are building a saw mill at Cascade, B. C. They have mills also at Nakusp and Robson.

—Mr. Boulanger, of Levis, Que., recently superintended the construction of two saw mills in the Portneuf and Saguenay districts.

—Sheriff Armstrong, of Parry Sound, Ont., is promoting a joint stock company to engage in the manufacture of hardwood flooring.

—The Northern Logging Company, Limited, has been incorporated by the Government of British Columbia, with a capital of $10,000.

—A planing mill and a dry kiln will be constructed in connection with a saw mill at Sidney, B.C., of which Mr. Matteson is superintendent.

—Irons & Winnacott have decided to enlarge their planing mill at Huntsville, Ont. They will install a complete sash and door equipment.

—Clarence O. Anthony, of Kennetcook Corner, N. S., has patented a water wheel. A recent test showed it to be powerful and economical.

—Incorporation has been granted to the Sandford Furniture & Woodenware Company, of Fenelon Falls, Ont., with a capital of $100,000. Francis Sandford is interested.

—Buckman Bros. are building a saw and shingle mill about three miles west of Whitney, Ont., to comprise two band saws, a band re-saw, four shingle saws and a lath mill.

—E. R. McDonald will likely build a new saw mill at Abbottsford, B.C. Mr. McDonald and his associates control a large timber tract near that place, where they are getting out piles.

—Cushing Bros. have been succeeded by the Cushing Bros. Company, Limited, with lumber yards and sash and door factories at Calgary, Edmonton, Strathcona and Fort Saskatchewan, N.W.T.

—The Dalhousie Lumber Company, of Dalhousie, N. B., have elected the following directors: James Manchester, George McKean, Henry Hilyard, Joseph T. Knight and A. H. Hilyard.

—The Victoria Lumber & Manufacturing Company intend building a logging railway from Ladysmith, B. C., into the timber limits owned by the company west of the Esquimalt & Nanimo Railway.

—The British Columbia Manufacturing Company, of New Westminster, B. C., have decided to establish a saw mill to prepare the raw material for their box factory. Henry Eckertt is manager of the company.

—H. R. Whitworth, a lumber dealer of Manitoba, is said to have purchased a site at Vancouver, B. C., on which to build a saw and shingle mill. He is at present inspecting some timber limits with a view to purchase.

—R.J. Shinner, timber inspector at Vancouver, B.C., has recently heard several disputes regarding timber limits. It is claimed that the law should be amended so as to obviate the difficulties arising from the overlapping of timber claims.

—A pine tree was recently cut by A. F. Stewart, of Carleton Place, Ont., which weighed twelve 13-foot logs. The second cut from the butt of the tree measured 46 inches in diameter, and the logs produced 3,540 superficial feet of lumber.

—The Canadian Elevator & Lumber Company have acquired the interests at Regina and at several other points of the Waddle Lumber Company and the yard at two Prince Albert branch stations of the Regina Lumber & Supply Company.

—The St. Croix Lumber Company, which recently purchased the timber limits and saw mill of T. G. McMullen at Truro, N. S., intend to operate the property energetically. Hon. David McPherson is president of the company and J. M. Davidson secretary.

—In last issue reference was made to the large saw mill under construction at Wardner, B. C., by the Crow's Nest Pass Lumber Company. It is learned that the machinery for this mill is being supplied by the Waterous Engine Works Company, of Brantford, Ont.

—A meeting of the British Columbia Lumber & Shingle Manufacturers' Association was held recently, at which the chief business discussed was the shortage of cars. It was stated that lumber shipments to the United States were almost at a stand-still on account of this drawback.

—The largest load of saw logs loaded on the Vermillion River this season contained 107 logs, averaging 9-inches in diameter, loaded on 10-foot bunks. The load was put on in fifty-five minutes by the three Houston brothers and was hauled 2½ miles with one team of horses.

—It has been decided to again put into operation the Ross-McLaren saw mill at Barnet, B.C. This mill was recently purchased by Minneapolis capitalists. It is intended to make extensive improvements, including the installation of a planer and dry kilns. It is probable that the bulk of the output will be exported.

—The Vermillion River Boom Company has been granted permission to construct timber slides, dams, piers, etc., on the north shore of the river. An amicable arrangement has been made with the Sable & Spanish River Boom & Slide Company, which holds a charter for the construction of improvements on the river. Members of the Vermillion River Boom Company own timber limits along the river representing about 800,000,000 feet.

—A special meeting of the St. John River Log Driving Company was held at St. John, N.B., recently. A proposal from John A. Morrison, who has a contract for log driving for four years, that he be relieved from further responsibility in connection with the contract, was considered. It was decided not to accede to Mr. Morrison's proposal and he will accordingly have to carry out his contract. A resolution in condemnation of the scheme to dam the St. John River at Fort Kent was unanimously passed.

—On the Great Northern Railway it has been decided to use triangular ties, each of which contains about 10 feet less timber than the ordinary tie. The broad surface of the ties on which the rail rests is twelve inches wide. The apex of the triangle is seven inches below the surface of the tie. There is thus a gain of four inches in width over the old eight-inch ties, which means that fewer are needed to a mile of the road. The shape of the new ties produces constant tamping into place, with resulting gain in rigidity.

—Recently a deputation, headed by John Charlton, M.P., president of the Reading Camp Association, asked the Ontario Government that grants of $100 be given to instructors in camps. The Public Libraries Act of Ontario provides a grant of $100 for evening classes in towns and villages. This is practically a dead letter. There are at present only three cases where it is taken advantage of, there being so many other educational facilities in the older parts of the Province, and the deputation urges that as one-half of the revenue of the Province comes from the forest and mines, such a grant should be available for the camps.

The Manitoba Iron Works, of Winnipeg, have had plans prepared for a new foundry to be built this spring. It is their intention to manufacture a line of mill machinery.

Emery Wheels, Corundum Wheels

and Grinding Machinery

All our wheels are first-class in every respect. All special shapes supplied without extra charge.

Are you using our **Improved Corundum Saw Grinding Wheels?** We guarantee them to cut faster and cooler than any other wheels on the market. Will not burn saws and are just what your **filer wants.**

Send **sample order** to be supplied on approval.

Canadian Corundum Wheel Co.

Hamilton, Canada

WOOD PULP DEPARTMENT

THE EXPORTATION OF PULP WOOD.

Touching the memorials that have been present to the Quebec Government asking for a greater rebate in favor of home manufacture of pulp wood, the views of Hon. S. N. Parent, Minister of Lands and Fisheries, are set forth in the last report of his Department, from which we quote:

The question of duties to be imposed on lumber exported in the raw state to be manufactured into paper abroad, continues to agitate commercial circles. A good many merchants, chiefly those who have embarked capital in pulp mills, are not satisfied with the differential duties imposed on this raw material from our province destined to supply American factories.

According to these gentlemen, the duties are not sufficiently prohibitive to enable American capitalists to make a profit by manufacturing that product on the spot, in this country; while they also think them altogether insufficient to compete to advantage with foreign competitors in the sale of their products.

I have been called upon, on two or three occasions, to decide as to the weight of these representations and I may say that it has been impossible for me to accept them.

The chief obstacles to the increase asked for arise, in the first place, from the fact that three-fourths of the material for these operations comes from private property over which the local government has no control; in the second place from lots sold to settlers who are clearing land for farms and to whom the imposition of an excessive duty would be odious. In the former case these differential duties, which cannot apply to lumber belonging to private individuals, would depreciate to the same extent the value of that cut under license which would be affected thereby. In the latter case, such an import would be considered unjust, and, even if it were possible to have it admitted, it would be impossible to collect it under such conditions.

To be acceptable and equitable such a measure must reach all producers equally and without distinction.

DUTY ON WOOD PULP.

The Board of Classification of the United States General Appraisers have given their decision in respect to the duty on pulp imported from Canada. The ruling is against the province of Quebec and in favor of the province of Ontario.

There were two protestants in the case, F. W. Meyers & Company, acting for Hollingsworth, Whitney & Company, of Boston, and the Sault Ste. Marie Pulp & Paper Company, of Sault Ste Marie, Ont. Two distinct questions were presented to the board. One related to pulp imported from Quebec, and the other to pulp from Ontario. In each case the pulp is made from wood cut on what are called "Crown lands." Under the law of Quebec, the Commissioner of Crown Lands is authorized to grant licenses to cut timber on the ungranted lands of the Crown, subjected to the "stumpage tariff," which provides that licensees shall pay a tax of 65 cents per cord for pulp wood cut, but a rebate is allowed of 25 cents per cord on "timber manufactured into paper pulp in the Dominion of Canada." The United States Customs authorities levied an additional duty on pulp equal to the 25 cents rebate allowed under a provision of the tariff for an additional duty equal to the export duty which any country or dependency may impose. The Board of Classification has overruled the protest relating to the pulp from Quebec, and the action of the collector in that particular is sustained.

The same additional duty has been imposed upon the pulp from Ontario. Under the law of that Province, however, no one is permitted to cut pulp wood on Crown lands unless it is to be manufactured in Canada. As regards importations from Ontario, the board held that the Province of Ontario "levies no export duty upon wood pulp exported from its limits, and, therefore, the additional duty imposed by the collector upon the merchandise from the Province was improperly assessed, his decision on that point is reversed, and he is instructed to reliquidate the entry so as to assess no such additional duty."

It is expected that the case will be appealed to the Federal courts.

NEW MANAGER FOR A PULP MILL.

MONTREAL, March 12th, 1903.

EDITOR CANADA LUMBERMAN:

Dear Sir,—I noticed an item in your paper that Mr. F. M. Steadman had succeeded Mr. Joseph S. Hughes as manager of the Sissiboo Pulp & Paper Company. This is not so, as Mr. Joseph A. Fessidle has been appointed manager. Please make the correction.

Yours truly,

"SHAREHOLDER."

PULP NOTES.

The pulp mill of the St. George Pulp & Paper Cempany at St. George, N. B., is expected to be in operation by May 1st.

The Brompton Pulp & Paper Company, of Brompton Falls, Que., have decided to proceed at once with the construction of a paper mill.

The United Lumber Company have decided to build a large pulp mill on the Clyde river, in Shelburne county, Nova Scotia. It is estimated that the water power will furnish 3,000 horse power.

The substructure has been completed for J. R. Booth's new pulp mill at the Chaudiere. The hydraulic installation for this mill is in the hands of the Jenckes Machine Company, of Sherbrooke, Que.

James L. Newton, of Watertown, N. Y., has purchased from the Quebec government two water powers on the Pentecost river in Lower St. Lawrence. It is Mr. Newton's intention to form a company to manufacture lumber and pulp.

The mechanical pulp mill and the paper mill of the Imperial Paper Mills Company at Sturgeon Falls, Ont., will be running this month, when 45 tons of paper will be produced daily. The output is shortly to be increased to 120 tons per day and it is intended to erect a sulphite mill in the near future.

A representative of Harmsworth Bros., proprietors of the London Daily Mail and other British periodicals, recently interviewed the New Brunswick government in respect to securing a location for a large pulp mill. The location of the proposed mill is at Grand Falls, on the Nepisiguit river, in Gloucester county, where an engineer is now surveying the water power. Messrs. Harmsworth require about 1,000 tons of paper a week for their various publications. It is reported that they will invest $2,500,000 in building a sulphite pulp mill of a capacity of 350 tons per week and a mechanical pulp mill of 600 tons per week.

Charles B. Campbell sums up the cost of making a ton of mechanical pulp as follows: The cost of getting timber from the pulp areas will average 4 dollars. per cord; much of it will cost more if the government insists

on the literal enforcement of the contracts. A cord of spruce will make 1,850 pounds of air-dry pulp, and sufficient timber to make a ton of pulp will, therefore, cost $4.30. The labour to manufacture it will cost $2 per ton, and supplies, maintenance and fixed charges, at a low estimate, $2.20 per ton ; total cost of a ton, $8.50 f. o. b. mill. This is the actual cost of putting a ton of pulp on the car at a well-appointed mill in Canada.

The chemical pulp industry of Austro-Hungary is reported to be in anything but a flourishing condition. Over-production is complained of, and importations appear to be on the increase. Producers complain that local paper mills show a disposition to manufacture their own chemical pulp, and frequently the surplus is put upon the market. There are some thirty pulp factories with a daily production of 600 tons, and one-third must be exported, which is a difficult matter owing to the geographical position of the Empire. Manufacturers look to Belgium, Great Britain, France and Italy, but find it a hard task to meet Scandinavian competition.

At a recent meeting of the American Sulphite Manufacturers Association, held in New York, the question of price cutting was discussed. The total daily production of unbleached sulphite for the market is estimated at 1,000 tons of pulp made by the mills in the United States and 200 tons imported. For this quantity there is a good demand, so the manufacturers say, and they add that there is no reason why any maker of sulphite should cut the price of the association. The agreed upon minimum asking price of the Association is 2 cents. This price, from all accounts, has not been insisted on for a number of months. The range seems to be from 1.85 to 2 cents. To sell for less than 1.85 is evidently considered an offence by most of the sulphite manufacturers. That there have been some such sales is common report. But since the week the manufacturers have confidence that price cutting will end.

Mark W. Marsden, of Philadelphia, Pa., has been granted a patent covering a machine for pulping or disintegrating fibrous materials, wherin the pulping operation shall be practically continuous and shall be accomplished in a speedy and efficient manner, the machine being also available as a pulp washer. The machine comprises a vat or tank and duplicate sets or pairs of compression rolls arranged within the tank at opposite sides thereof. The rolls of each set are superposed one above the other and are arranged to be driven at different speeds through the intervention of suitable gearing. The rolls are formed with smooth cylindrical faces and the upper roll of each set is movable with respect to its mate, so that an adjustment can be effected to accommodate the rolls to coarse or fine cut material. The action of the rolls upon the fibrous material is a peculiar rubbing action, as contradistuingished from that of a beating machine, so that the fibres are obtained in a long, good, strong condition. The movement is practically a synchronous one, motion being imparted from one set of wheels to the other, so that an even and continuous circulation of the material is obtained, thereby insuring a uniform product. The head blocks in which the rolls are journaled may be tongued and grooved or otherwise fitted directly in the sides of the vat, and are provided with flat inner faces against which the ends of the rolls snugly fit. The midfeather or partition which encases the intermediate gearing is likewise provided with flat faces flush with the abutting ends of the rolls, so that the fibrous material must of necessity pass through and be acted upon by the rolls. The machine is equipped with suitable inlet and discharge passages, and also with a sieve or strainer, with its complemental outlet to adapt it to pulp washing purposes.

The CANADA LUMBERMAN regrets to learn of the illness of Mr. W. R. Thompson, lumber merchant, of Teeswater. Mr. Thompson was recently in Toronto for medical treatment.

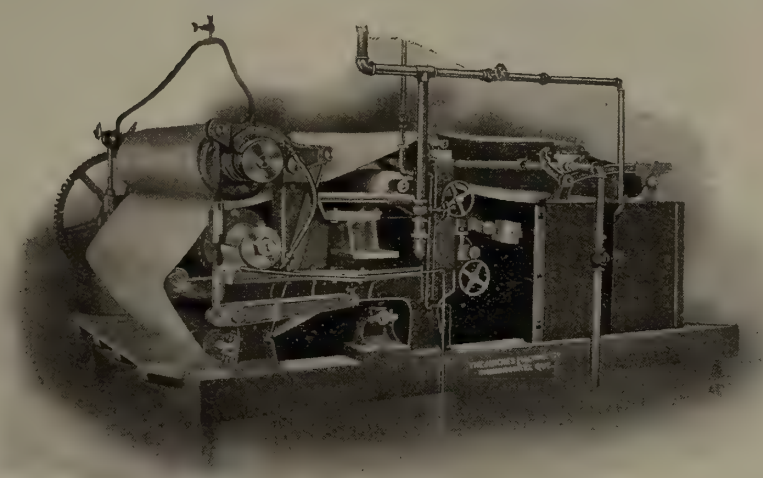
Improved Wet Machine Pattern
With Hydraulically Loaded Press Rolls.



In this type of machine even pressure on felt is secured by means of hydraulic pressure cylinders on each side of machine, acting through their pistons on compound levers, which increase pressure on rolls to 1000 times that on pistons

Pressure varied at will by operator.

We also build an improved pattern Wet Machine identical with this type save that the rolls are spring loaded, instead of hydraulically loaded.

This type has given good satisfaction, and we have installed it in many mills.

Our new 1903 Catalogue of Pulp Mill Machinery, Catalogue E, is now in preparation, and by applying now, you will be sure of a copy when issued.

QUEBEC FORESTS.

The report of the Minister of Lands, Mines and Fisheries for the province of Quebec for the year ending June 30th, 1902, shows that the receipts from forests were $1,055,037.48, which included $201,002.91, the proceeds of a timber limit sale. The following statement shows the area ot timber land under license and the quantity of timber cut during the year under review :

Area under license	82,952⅛ sq. miles
Square timber, pine	635,621 cubic feet
" " hardwood	129,004 " "
Spruce, hemlock, balsam, cypress, cedar, white birch and poplar saw logs and boom timber	319,866,256 feet b.m.
White pine saw logs	51,363,526 "
Red pine	38,076,043 "
White pine saw logs under 11 inches in diameter	17,867,311 "
Pulp wood	260,194 cords
Poles	128,042 lineal feet
Railway ties	629,270 pieces
Pickets	6,886 "
Shingles	18,043,000 "
Rails	6,635 "
Hemlock bark	12,364 cords
White birch for spool wood	4,424 "

The timber dues realized $664,552.44, ground rent $163,983, timber limit sales $201,483.39, and transfer fees $11,871.74.

Concerning the relations existing between the settlers and lumbermen the report says :

In this country the settlement and opening up of our vacant lands and the consequent increase of our population constitute our chief aim. All our energies are directed to that end, for from it is derived the political influence we now have and which we are to possess in the future. On the other hand, we have immense wealth to develop by the exploitation of our vast forests. They constitute our greatest source of revenue, and from those forests, with the aid of our innumerable water powers, we shall obtain what our province needs to become a great manufacturing country, and thereby retain that section of our population that is always ready to emigrate.

True settlers and timber license-holders, when they remain within their respective spheres, do not hinder but, on the contrary, assist one another. In regions remote from the large centres colononization progresses in proportion to the extent and prosperity of lumbering operations, for the latter create markets for the former.

But the unheard of, almost abnormal prosperity we are now enjoying, gives rise to another state of affairs. It invites a great many persons to employ every means in their power to take advantage of the benefits it promises. Thus merchants, both great and small, manufacturers of all kinds associate with the settlers and with the heads of families of twelve children, and make use of them to attain the desired end.

The very great value that wood suitable for the manufacture of pulp gives to lots, even to those with the smallest quantity of timber, causes the demand therefor to become more and more pressing. So much is this the case that it would be very easy for me to dispose, in this manner, in a very short time and at apparently remunerative prices, of the whole of that portion of the province now divided into farm lots.

To this end it would be necessary to set aside a great many limits, duly acquired at high prices, and retained for many years by the payment of the regular ground rent and stumpage dues, with the view of favouring other lumbermen disguised under a false name. Such a measure, apart from its charcter of injustice, would ruin our credit, and would finally result in our seeing vast areas of our public lands taken possession of and every opening closed to colonization.

In this connection I cannot do better than cite the example of our neighbors in the State of Maine. As everybody knows, only a limited portion of the territory of that State is under cultivation, the greater part being still in forest. These forest lands were sold long ago and passed into the hands of large landowners, who now refuse to sell any farming lands because the lumber production, properly managed, yeilds them ample revenues year by year.

The J. S. Henderson Company, Limited, manufacturers of oil-tanned larrigans, Parrsboro, N.S., expect to have their new factory completed at an early date. It is equipped with modern machinery and the latest labor-saving appliances.

James W. Woods, manufacturer of lumbermen's supplies, Ottawa, has again found his accommodation inadequate, and is now building a seven-storey warehouse on the south side of Slater street. The building will be first-class in every respect.

The new factory of the Compensating Pipe Organ Co., of Battle Creek, Mich., will be outfitted with American Blower Company heating and drying apparatus. The same company are also furnishing dry kilns for the Boake Mfg. Co., Toronto, Ont.; Detroit (Mich) Table Mfg. Co.; Wm. E. Uptegrove & Bro., Johnson City, Tenn.; Kelley Island Lime & Transport Co., Duluth, Minn.; Barber Bros. Chair Co., Hastings, Mich.; Cadillac Cabinet Co., Detroit, Mich.; D. M. Rose & Co., Knoxville, Tenn., and the Duane Chair Co., Dalton, Ga.

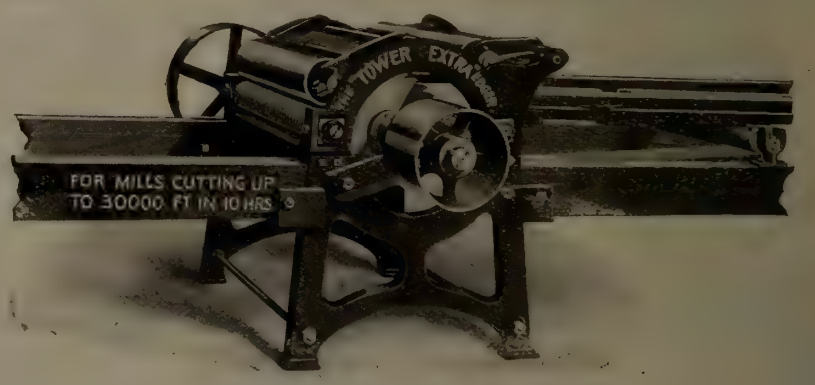
A SPLENDID EDGER FOR SMALL MILLS AT LOW PRICES.

The "TOWER" 2 and 3-Saw Edgers, Improved.

For mills cutting not to exceed 20,000 ft. in ten hours.

The "TOWER EXTRA" 3-Saw Edger

A larger f the "TOWER," for mills cutting up to 30,000 in ten hours.



1,000 in Daily Use!

Among the many reasons for the wonderful popularity of these celebrated edgers are the following :

1. They take up little room.
2. They require little power.
3. The feed rolls are adjustable in FOUR directions, which means extreme accuracy.
4. The saws may be removed easily and quickly, without disturbing the arbor.
5. The mechanism for shifting the saws is up-to-date, convenient and positive.
6. The vital parts are carried by a substantial iron husk resting solidly on the floor.
7. They are pre-eminently practical.
8. There is no edger made approaching them in cheapness.

The "TOWER" One-Man 2-Saw Trimmer.

With this trimmer one man can easily trim the output of a mill cutting up to 30,000 ft. in ten hours. SEND FOR CATALOGUE D.

Improved Gang Lath Machine

This machine is entirely self contained—does not require a counter-shaft and pulley to drive the feed from.

It has a solid iron frame. The feed rolls are milled from solid steel bar and case hardened. In fact the machine is constructed of the best material throughout. Carries four 12 inch saws and will do fully as much work as any other machine made for the same purpose.

I manufacture other lath machines much heavier than this cut shows, and lath bolters of various capacities.

I also have a full line of saw mill and shingle mill machinery, and can quote low figures, especially to cash customers.

CATALOGUE FREE.

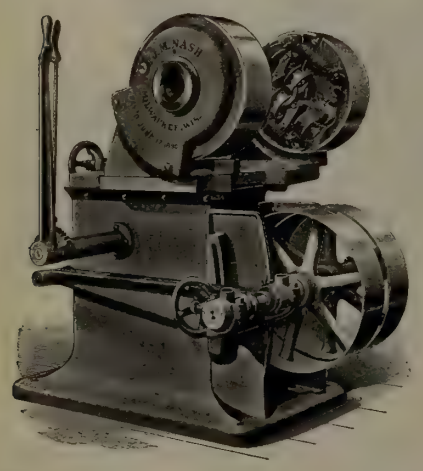
ONE BOY AGAINST FIVE MEN



The boy with a Nash Sander will do as much work, and do it far better than five expert men can do with the old fashioned sand belt. You can

Figure the Saving Yourself.

It is simply the difference between what you will pay one boy and what the five men will cost. If you make any kind of round work, such as chair legs, spindles, dowel rods, curtain poles, shade rollers, handles etc.,

You Can't Afford Not to Use it.

The machine will save its own cost in three months, besides making an improvement in the quality of your work that is a profit in itself.

Costs Nothing to Investigate.

INMAN POULSEN & Co.
Oregon Pine Lumber.
Annual Output 75 million feet.

PORTLAND, OREGON, January 8th. 1903.

ZIMMERMAN - WELLS MACHINERY Co.,
Portland, Oregon.

GENTLEMEN, In reference to your inquiry regarding the workings of the Ray Patent Steam Feed purchased from you about eighteen months ago, we have this to say regarding the feed, that it certainly is not only the best feed that we have ever used, but undoubtedly has no equal to-day on the Pacific Coast.

We have dropped as high as twelve 24-ft. 1" boards in one minute. In doing this, the carriage would have to travel about 650 feet and stop and start twenty-four times in one minute. The weight of the carriage, head blocks and log would be about ten tons. This would give you a pretty good idea of the Power exerted by the feed in handling a load of that size at such a velocity.

We have run this feed night and day since we have had it, continually, and the same ropes are still in service that were put on when the feed was mounted. Everything about the feed seems to be in as good condition to-day as the day we got it. We would not take it out and put back our old feed for ten times the cost of the new one. You will see that we are more than pleased with it.

Yours truly,
INMAN POULSEN & Co

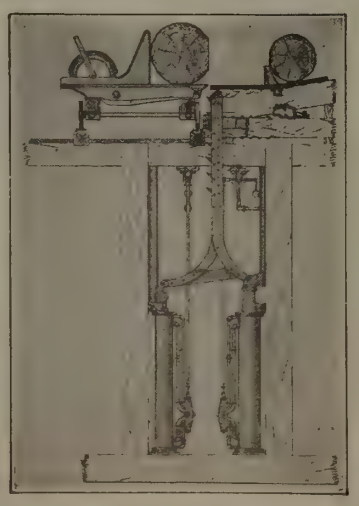
Plain Tales from the Hills

(NOT BY KIPLING)



Here is a machine. It is called a Hill Steam Nigger. With it you can increase the cut of your mill three to five thousand feet per day. It can also make the two or three men now ornamenting your log deck superfluous luxuries. Now, stop and figure out how much more money you will be worth in a year if you can increase your cut and decrease your pay roll as we have said, then you'll order a Nigger.

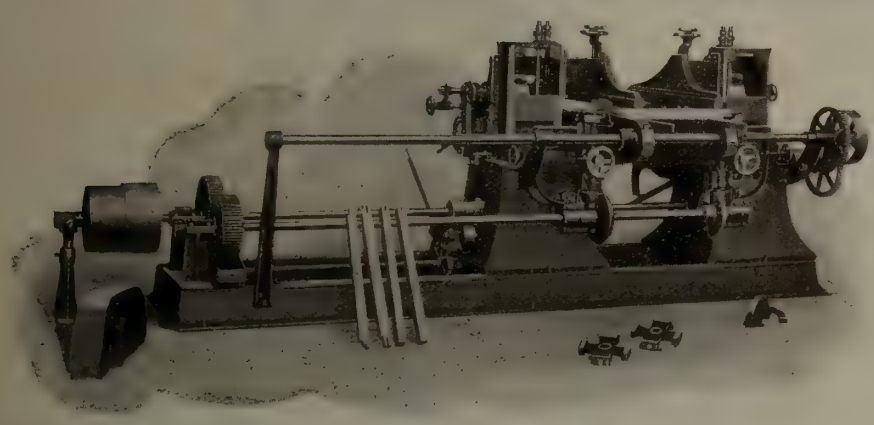
CONVEYING MACHINERY

William R. Perrin & Company

TORONTO, CANADA.

The first of its kind on the market. New and original and first introduced by us

E. B. HAYES MACHINE CO., Oshkosh, Wis.



When a new and improved machine that has great merit in it like this one, is put onto the market, often times other machinery manufacturers will recognize the fact that it will be a good seller and they will try and start in to copy, of course providing they can do it. We expect it may be the case with this machine, but we know that all the mill men purchasing machines will want the Original, for many mill men in the past have met with great disappointment in buying copied machines. Write for full information.

OVER 35,000 IN USE IN EVERY KIND OF TIMBER

THE ONLY SUCCESSFUL INSERTED-TOOTH SAW.

THE TWENTIETH CENTURY SAW

Our Chisel-Tooth Saw is adapted to all kinds and conditions of sawing, and does equally well in hard or soft woods, winter or summer, large or small mills.

It increases the output of the mill, requires less power and makes better lumber at less cost than any other saw.

BEWARE OF IMITATIONS.

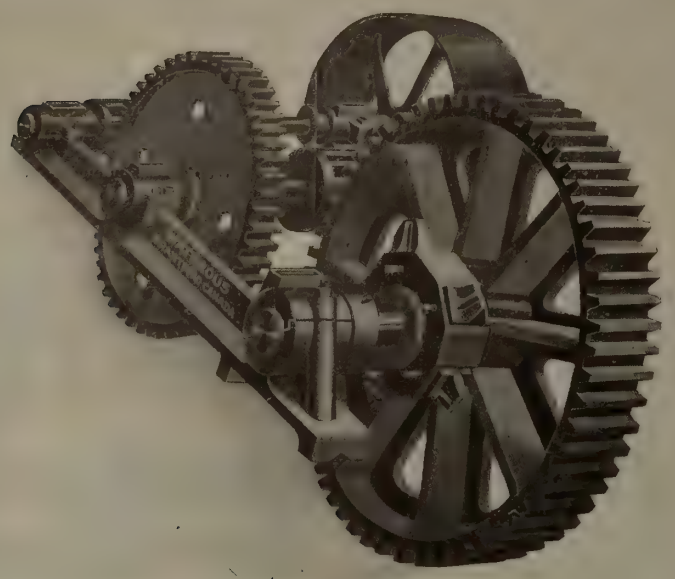
R. HOE & CO.

504 to 520 Grand Street, NEW YORK, U. S. A.

Catalogues with Prices and Further Particulars Sent on Application.

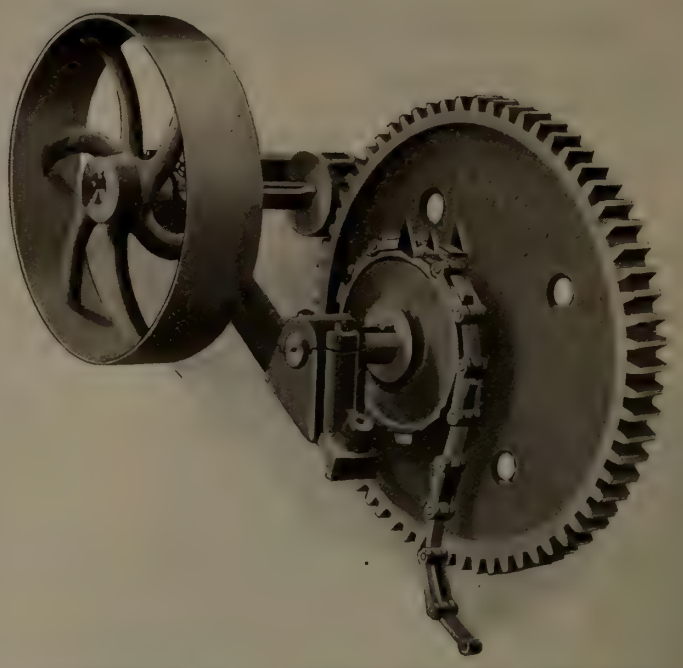
ENDLESS CHAIN BULL-WHEELS OR LOG JACKS



WATEROUS NO. 0 DOUBLE-GEARED LOG JACK

With spur gear to drive from shaft running across mill.

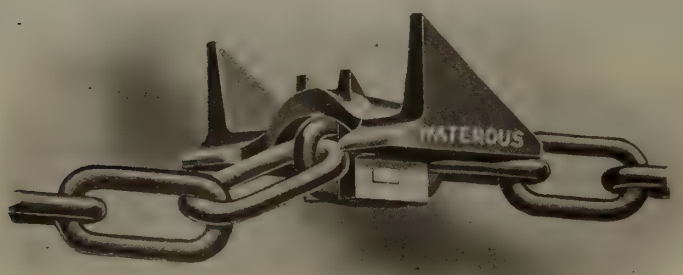
When needed to drive from shaft running lengthwise of mill, we replace smaller spur gears with bevel gears or frictions placed outside of iron frame.



WATEROUS NO. 1 SINGLE-GEARED LOG JACK

With No. 86 log chain. Cast steel spurs and centre links, steel side links, 6″ pitch. No. 80 log chain is the same style but heavier with drop forged center links, 8″ pitch.

PULLEYS CAN BE READILY REPLACED BY STRAIGHT FACE FRICTIONS.



Cable Chain with Cast Iron Log Spurs

Chilled wearing shoes 4x12″ on each side round link. Made 10″, 12″, 14″ wide for 1″, 1¼″ and 1½″ chain. Can't turn on chain.

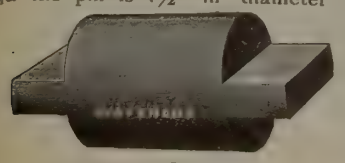
No. 86 Steel Chain (Cast Steel Log Spurs).

Rivets ¾″, side bars 1¾x⅝″, 8″ pitch, center (cast steel) 2¼x6″ pitch. Spurs 9″ point to point.

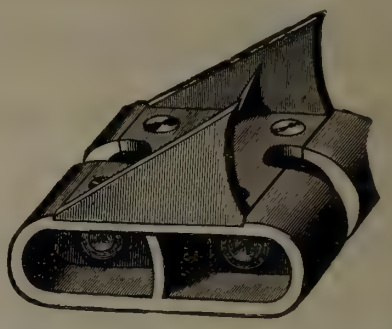
No. 80 Steel Chain

Is 8″ pitch similar to above, except that solid link is a drop steel forging and the pin is 1½″ in diameter (like illustration) and is fixed in position connecting side bars, presenting a large wearing surface for solid link. Side bars 2x1½′

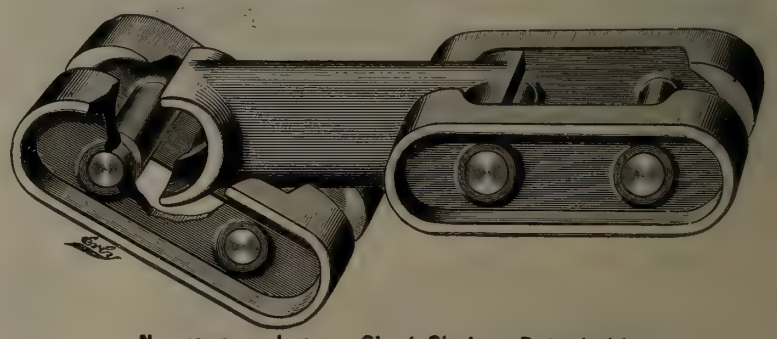
Taking a safety of 4½″ this chain gives a 10,000 lbs. working strain. Log spurs same as No. 86 or of heavy forged steel, any spread desired.



PIN OF NO. 80 CHAIN.



Malleable Log Chains—Detachable, readily applied.



No. 1050 and 1075—Giant Chains, Detachable.

Not recommended for salt water—but there is no better chain for fresh water.

Forged Refuse Chains

R. Double.

Outside width 12½ in.—Made of 1½x⅜ in.

The 10 to 15 Tons of Ewart Detachable Link Belting we carry in stock insures prompt shipments.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

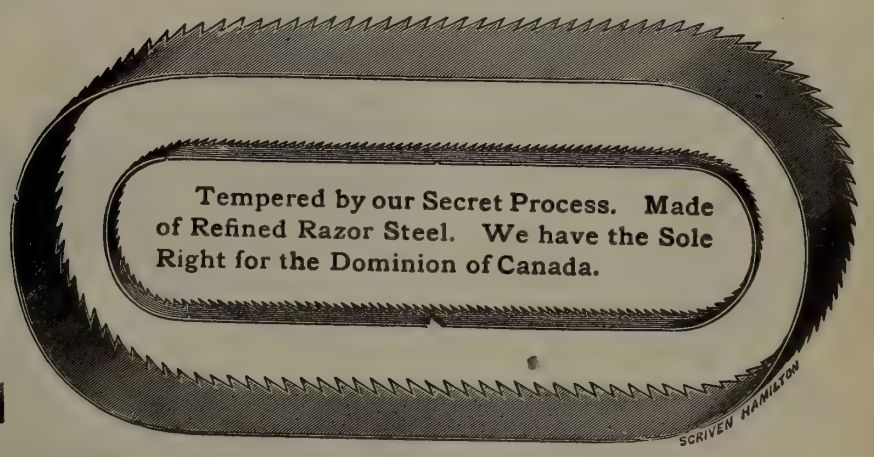
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

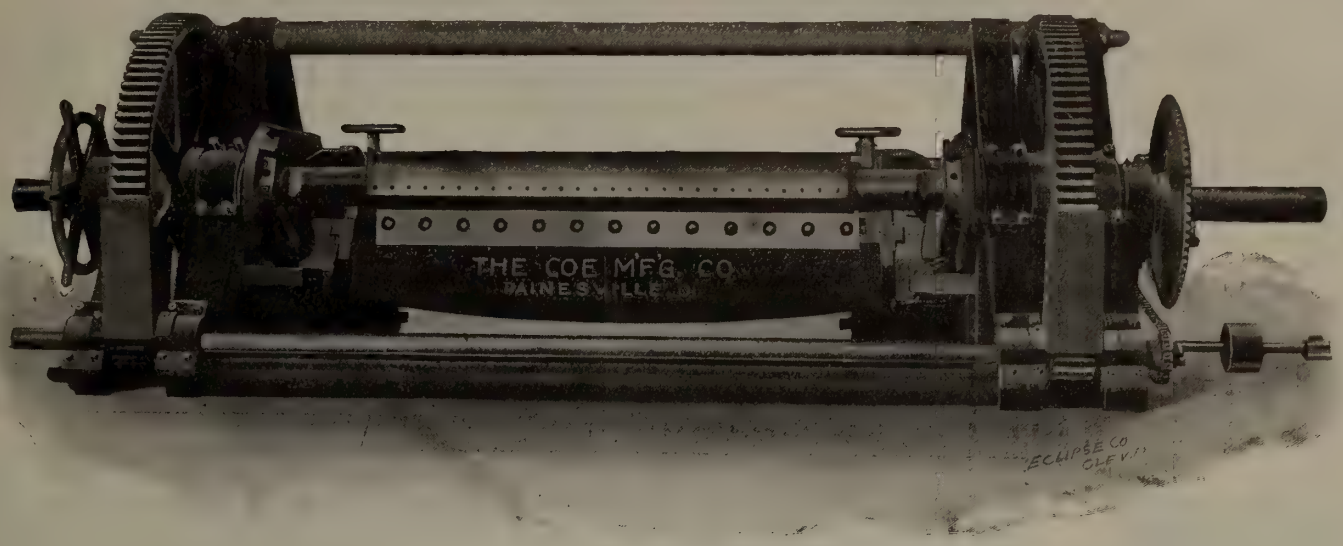
Our Celebrated

Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition to reduce logs into thin lumber and veneers.



The product is high grade.
The output is great.
The cost of operating and maintenance is reduced to a minimum.
Quite a combination, is it not ?

Timber and mill owners should get in early.

Buy a Coe Veneer Cutting and Drying outfit and prepare to supply thin lumber and veneers which have a healthy growing demand. More money in it than sawing your logs into lumber.

Annual Output 75 million feet.

PORTLAND, OREGON, January 8th, 1903.

ZIMMERMAN - WELLS MACHINERY Co.,
Portland, Oregon.

GENTLEMEN, In reference to your inquiry regarding the workings of the Ray Patent Steam Feed purchased from you about eighteen months ago, we have this to say regarding the feed, that it certainly is not only the best feed that we have ever used, but undoubtedly has no equal to-day on the Pacific Coast.

We have dropped as high as twelve 24-ft. 1" boards in one minute. In doing this, the carriage would have to travel about 650 feet and stop and start twenty-four times in one minute. The weight of the carriage, head blocks and log would be about ten tons. This would give you a pretty good idea of the Power exerted by the feed in handling a load of that size at such a velocity.

We have run this feed night and day since we have had it, continually, and the same ropes are still in service that were put on when the feed was mounted. Everything about the feed seems to be in as good condition to-day as the day we got it. We would not take it out and put back our old feed for ten times the cost of the new one. You will see that we are more than pleased with it.

Yours truly,
INMAN POULSEN & Co.

Why Not Cut Down the Expenses of Your Power Transmission?

It can be done by the installation of the Dodge Rope System.

The Dodge Rope drive is cheaper in its first cost of installation than other systems

It is more positive as to power delivery.

It delivers power with practically no diminution, as slippage and friction are minimized.

It is flexible in operation, distributing power to any desired point at small cost of installation and maintenance.

It combines with the Dodge Split Friction Clutch to make each drive distinct and separate so that a break never delays but the affected drive.

It delivers power positively and without loss, lessening fuel bills.

It is simple, durable and easy to keep in order, always ready for action and never causing complete shut downs from breaks.

We make Dodge Rope Drives to fit every individual case.

Let us submit plans and prices to you and demonstrate that the Dodge system will cut down your expenses.

THE CANADIAN LUMBER CAMP

By P. H. BRYCE, M.A., M.D.

THE stories of voyageur and lumberman have echoed down the years of a century, and the public have, through Parker's "Romany of the Snows," and Gordon's "Man from Glengarry," been given pictures which cause the aroma of a primitive, almost savage civilization to cling to the occupation which for more than one hundred years has been the back-bone of Canadian industry and a means of wealth to her largest capitalists. Whatever of truth there has been in these romances of the lumber woods, there is to-day another history growing by gradual accretion, which, when written, will show that the Canadian lumberwoods is but the rear farm of thousands of lusty frontier Canadians, who having completed the summer's work in their homes, take their surplus energies to one of the best paying labour markets in Canada to-day.

These well-to-do young farmers are not likely to be very different in the camp from what they are at home ; neither are they, without protest, likely to endure living conditions which in the ruder days, with smaller and less permanent camps, and fewer transportation facilities, naturally resulted.

HIGGINS' LUMBER CAMP IN THE SUDBURY DISTRICT OF ONTARIO.

A very brief summary of modern conditions, by one who has viewed the camps from neither the employer or employee's standpoint, may perhaps be of interest to the readers of THE LUMBERMAN.

With the enormous extent of lumbering operations in Ontario, extending some 1,200 miles from east to west and hundreds of miles north and south, with the greatly increased investment of capital and the yearly enlarging market for the products of the forest, it is apparent, with railways and steamships constantly increasing transportation facilities, that it has become possible to introduce into lumbering every element of a systematized business which is continuously in operation throughout the year. Within recent years the season's cutting operations have begun much earlier than formerly, and in September and even in August the axemen move toward the woods, erect new camps, take in necessary temporary supplies and begin the season's cut. Overseers or foremen have already gone over the area of the winter's prospective cut and fixed the number and location of camps with a view to easy access to one another and to the base of operations on some railway or navigable lake or stream, so that the construction of camps and the connecting roads is rapidly completed.

It is at this point where one of the chief differences between past and present may be seen. In former days the limits operated were those nearest the largest streams, and operations were distributed along these ; but to-day, the interior townships have to be worked and a comprehensive plan of campaign, with its central base a permanent camp, and its outlying posts or temporary camps, is necessary to economy of operations. This naturally means better buildings, and as may be seen in the accompanying cut a central lumber camp means a small village in the forest. It consists usually of (1). The main dwelling or dwellings of the men. (2). Cookhouse and eating room in separate compartments. (3). Wash-house and a tub-room. (4). Stables. (5). Store-room and offices.

Such are the common equipments of the head-quarters camp, to which the sanitary regulations of 1901 have added a separate building or tent equipped for the reception of any person suffering from an accident, or if a contagious disease they are housed in a separate tent.

In past years complaint was frequently made that a disregard was frequently shown by foremen while locating a camp in the matter of securing a water supply free from danger of pollution by the drainage from the stables and camp, and instances were not lacking of outbreaks of typhoid resulting from such neglect. More frequent than this, perhaps, was the complaint that the disposition of the household wastes from the kitchen as well as the location of stables and latrines were wholly at variance with the first principles of sanitation; but when it is remembered how in the permanent homes in many of our villages a similar neglect exists, we do not wonder that these temporary homes in the woods were not infrequently found lacking in this regard.

It was with a view to remedying some of these evils incident to usually some of the smaller camps and enforcing the definite care of the men through hospital and medical attention, that in 1901 the Ontario Legislature passed an Act providing for definite regulations being made, whereby the camps were required to be constructed on well drained locations, to have a minimum air space per man of 300 cubic feet, that a regular ventilation be supplied by fresh air being brought to a space beneath the stove, while an equal area of exits for foul air was supplied by ducts carried from near the floor to the heated spaces around the stove pipes ; that the cookhouse be in a separate building, and that buckets for the kitchen refuse be regularly used for a daily removal to such a distance as would prevent a nuisance, and that latrines or earth-closets be located and cared for in such a manner as to be approved of by the medical officer of the company or by a provincial health officer.

The manner in which the large number of operators have endeavored to carry out the regulations has been most gratifying, and in the monthly reports received from their medical officers, the almost complete absence during the past winter of contagious disease, as smallpox or diptheria, in the 30,000 men of the camps, and in the absence of complaints whether from employers or employees, it may be said with truth that nowhere within the Province has any similiar population for the same period probably maintained so high a state of general health.

Such, then, are the conditions under which the many thousands of our shantymen now spend their winter evenings ; for during the days their labors in the pineries are so absolutely free from the polluting touch of human habita-

tion that, except for the occasional accident, such life in the evergreens is the surest health tonic, and the certain guarantee of an appetite and zest for the slumbers of the night and the camp-fire stories. Formerly the occupations of the men in the shanties during the evenings were not elevating; but to-day in well ordered camps the library and the night-school, through the sacrifice of missionary workers and the liberality of the employers assisted by the government, are supplying not only occupation and entertainment but are being made an increasing source of instruction for many. Nor are legitimate amusements wanting. A visit made by an officer recently to the camps found the graphophone agent plying his trade. A price was set on an instrument and a camp raffle organized. The phone became the property of the fortunate one; but so charmed were the others that not one but many were purchased to be taken home to delight less enfaus "bien aimés."

Equally great are the changes in the drinking habits of the shantymen with those in the older settlements. More than one of the counties whence go the largest number of shantymen voted in the recent plebiscite for prohibition, while the curé and the clergyman are welcome visitors in the many widely distributed camps.

It would not be pardonable in a health officer, in such a general article, to omit a reference to a phase of this life in the northern forests too often overlooked. This is its value as a health asset to our population of young men. The life possesses in the highest degree the three elements of a strenuous life, viz., vigorous exercise in the most glorious atmosphere possible, crisp and balsam scented, an adequate diet of the best nitrogenous and heat-making foods necessary for such labours, and a long night of refreshing slumber. Many have been the dyspeptic young men who have come from the woods at the end of the season strong and well, who elsewhere would by spring have been marked with the hectic of the consumptive.

What the training yearly of so large a number of young men in woodcraft means to a province or country with its millions of acres of untrodden forests with their uncalculated wealth, is not often thought of in the way it deserves. But it is to such, rather than to those drifting to our cities, that we are to look in the future, as in the past, for those captains of industry who build railways, navigate seas, and snatch from the flinty bosoms of the rocks the hidden wealth of a nation. Be it Aleck Lachance or Pierre Delorme, Sandy Macdonald or Duncan Cameron, the echo of the woodman's axe is ever the same. The halloo and chains-rattling of the galloping teams through the bush road stir the blood of the teamster to deeds of skill, and the rafting of the logs in the rivers still calls for the same daring of the river-drivers as of old.

"Dere's a beeg jam up the reever, w'ere rapids is runnin' fas',
An de log we cut las' winter is takin' up all de room:
So boss of de gang is swearin', for not'ing at all can pass,
An' float away down the current till somebody break de boom."

"Dere was de job for a feller, handy an' young an' smart,
Willin' to tak' hees chances, willin' to risk hees life.
Cos many a t'ing is safer, than tryin' de boom to start,
For if de log wance ketches you, dey're cuttin' you lak a knife."

THE GREAT NORTHERN RAILWAY.

It may interest the readers of the CANADA LUMBERMAN to know that the Great Northern Railway of Canada has just taken over the Montfort & Gatineau Colonization Railway extending from Montfort Junction on the C.P.R. Labelle branch northwesterly to Arundel, on the Rouge River, a distance of 33 miles. A survey has already been made from Montfort Junction to connect with the Great Northern main line at St. Jerome, (12 miles), and it is expected the road will be continued through to the new bridge under construction at Bout de l'Isle, making a through line from what is now the Montfort Division to Montreal.

RAFT OF TIMBER ON THE UPPER OTTAWA RIVER.

Reports from this section show that there are about 1000 cars of lumber and slabs on hand from last year and this year's cut is estimated at 16 million feet, principally spruce, and the lakes are fairly black with logs. There is also quite a large quantity of square birch being taken out, as this seems to be the best hardwood country in the Province of Quebec. The principal operators in this vicinity are the Laurentian Lumber Company (Williamson & Morrison), W. D. Graham, who also represents the Ottawa Lumber Company, and Rinaldo McConnell, of Ottawa. Mill owners on this road have experienced a great deal of trouble in the past in getting their freight shipped, but now that the road has been taken over by a more powerful corporation, it is expected this will be a thing of the past and already quite a number of cars have been loaded out, principally to Montreal. The country itself is most picturesque, the car window giving one a continuous view of mountain, lake and river. Sixteen Island lake is the gem of the Laurentides. This new deal will give lumbermen of that section the opportunity of exporting via Quebec, as well as Montreal so far the Great Northern has arranged for a weekly service of the Leyland Line, Quebec to London, of which the first vessel will be the "Iberian", April 25th, every 12 days to Manchester, first sailing "Austriana" May 6th, and fortnightly sailings to Liverpool and Rotterdam are now being arranged.

SAW MILLS AND LUMBER IN CUBA.

Mr. Max J. Baehr, United States Consul at Cienfuegos, Cuba, writes as follows:

Many complaints have been made here relative to the lack of milling facilities for dressed lumber. A lumber dealer of this city, Mr. Hunter, states that there are only two saw mills here, neither of much utility, and they charge exorbitant prices for dressing lumber—$9 per 1,000 feet. He has leased for four years, with the privilege of buying at the expiration of that time, the best milling site in Cienfuegos, and he offers this site free of rent to any enterprising American who will establish a modern saw mill here. He will promise the American all of his own sawing, and no doubt he would receive the work of the many large plantations in this province and that of the new Cuban Central Railroad. Mr. Hunter says that there is a great local demand for doors, window frames and mouldings at very profitable prices, these articles being now imported from the United States under heavy rates of duty.

The fact that an American firm has established a good saw mill in Habana and is now buying logs in this port and shipping them to the mill, paying freight rates equal to a shipment to the United States, makes it apparent that the establishment of a mill in this city under the conditions mentioned would be very profitable. My own investigations along this line substantiate Mr. Hunter's conclusions.

In connection herewith I would mention that the two principal export woods of Cuba—mahogany and cedar—are steadily enhancing in value, and the holders of the choicest timber lands on the north coast, as well as those holding lands adjacent to the new Central Railroad, are advancing their prices. Nevertheless, there are good mahogany lands on the south coast of Cuba that may yet be bought at a low figure.

GOOD LUMBER MARKET IN EGYPT.

Dr. Cartwright, son of Sir Richard Cartwright, Canadian Minister of Trade and Commerce, is on his way from Egypt, where he was officiating as surgeon to an English regiment. He says Egypt has a greatfuture and offers goods prospects for business men.

Dr. Cartwright further said that there was a splendid opening there for Canadian pine. Egypt was timberless, and there was a lumber monopoly. Most of the timber used now came from Norway. He had written to Sir Richard Cartwright urging the Canadian Government to make known the Egyptian market to Canadian shippers.

The Food Supply for Lumber Camps

A Comparison of the Provisions Furnished To-Day with Those of Earlier Years.

IN the twentieth century lumber camp the commissariat is as important a feature as it is in the modern army. The shrewd operator figures out the problem of food supply a long ways ahead, seven or eight months in fact. Though the work on the limits does not commence till August, the movement of supplies is generally attended to in the preceding months of December, January and February. Thus by taking advantage of the snow and ice roads, tranportation is facilitated and cost of same reduced.

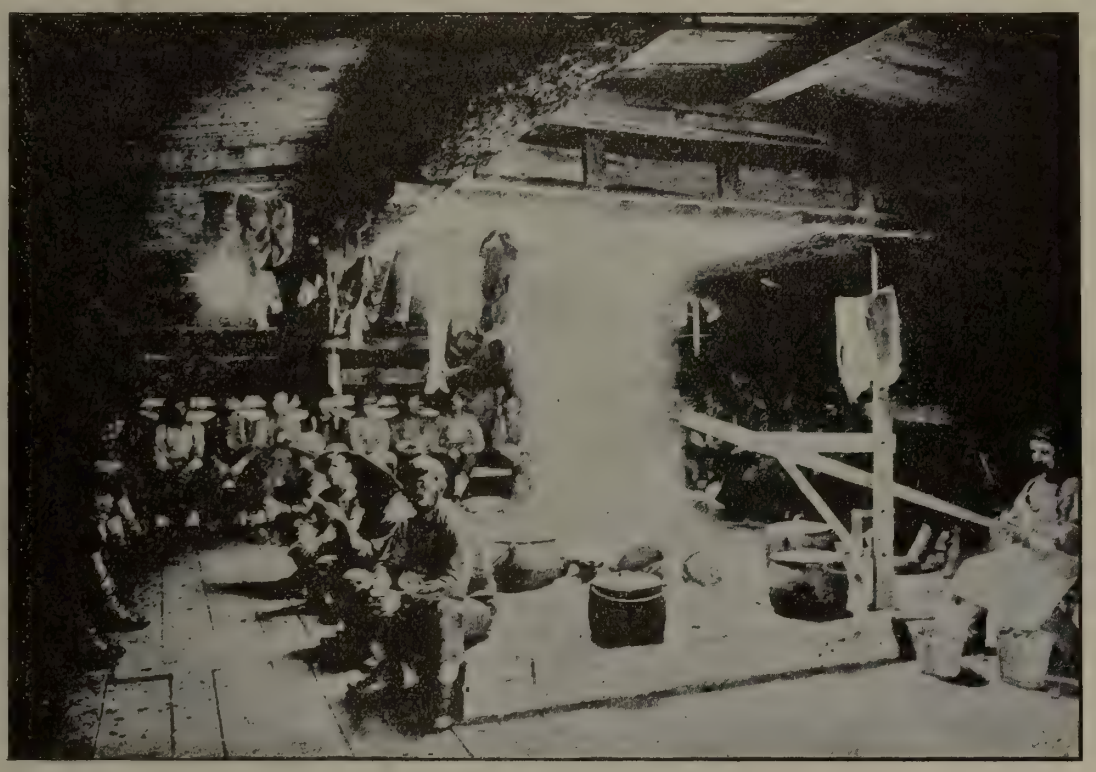
The supplies for the camps are purchased nowadays much in the same manner as they were ten or twenty years back. The buying is generally attended to by the head of the lumbering firm. While tenders are not called for, the advantage of such a procedure is secured through the enterprise of the wholesale firms themselves, who are all eager to supply the expansive invoice of goods. Prices are quoted on the different lines of stuff, and the lumberman, buying in quantities, secures the reduced or wholesale rate granted the retail merchant.

There is one difference that the years have brought about, formerly the goods were delivered at the railway station most convenient to the limit, now the purchaser has to pay freight from the city of first shipment. Few of the lumber firms employ a purchasing agent, as do railways and other large corporations.

The stock that can now be found in a well appointed "keep-over," as a food depot is called in lumbering parlance, would do justice to the best general store. It was not always thus. Fifteen years ago the sturdy shanty-man who partook of his humble dish of pork and beans, offered a striking contrast to the axeman of the present day who finds on the limits a table that equals, in quality and variety of food offered, the country hotels and many of the city houses for that matter.

It is generally supposed that the pioneer shantymen waxed strong on pork and beans. This is not historically correct. The pork preceded the beans, the latter being introduced at a later date on the Canadian limits by the American firms. In the early days the bill of fare in the shanty was a "lean" one, the principal items being pork and hard tack.

An aristocracy was established in the camp-community years ago by this same question of food. The man who could afford the luxury of a cup of green tea was considered a notch higher than his fellow less fortunate. The men had to provide their own tea pots, knives and forks. Sometimes they had to secure their own tea, and where it was furnished by the firms, the men in many camps had to pay for it out of their wages, so that tea was considered a great luxury. The years passed by and beans, peas, rice, dried apples, fish, and molasses, or "blackstrap", found their way into the camps, and bread replaced the hard tack.



THE "CAMBOOSE" SHANTY.

The "Camboose" Shanty is still in evidence on the Coulonge River. This old style has been abandoned on almost all other streams for the American style—the cooking range and the box stove, which is considered more up-to-date and economical, but there are concerns who prefer to keep up the old style on account of its being more cheerful for the men and because they think it more cleanly and healthful. The cooking is all done over the open log fire. The bread and beans are baked in the hot sand.

It may be asked, why were beans, peas and dried apples selected for camp fare? There are several reasons. In the first place, they were generally moderate in price, readily handled in transit, and easily prepared for the table on the open fire of the "camboose".

In the early days the meal was prepared and partaken of under the roof that sheltered the bunks of the shantymen. Thus the one room served all purposes--eating, cooking, and sleeping apartment. The cook had to bake his bread in the open fire place and the hot sand and ashes furnished him with his primitive oven. Everything baked and boiled had to be so treated in covered pots. The sponge for the bread was placed in one of these receptacles and buried in the hot sand and ashes, the pork, beans or peas were placed in other pots suspended from a crane, and the dinner was "on."

When the men were assembled for the meal, each took his seat on his bunk, plate in hand. From the pots the men all helped themselves, the result being a waste of food, as liberal "leavings" were thrown back into the open fire. This meant a big expense item. It was an uncommon thing in the days of the early eighties to find vegetables in the camps.

How are things now? Vastly different and greatly improved. An invoice of supplies for the limits will contain mention of pork, beef, corned and fresh, salt and fresh fish, flour, beans, peas, rice, butter and lard, jam, evaporated apples and other dried fruits, such as apricots, peaches, dates, prunes, figs, raisins and currants, tea, sugar, yellow and granulated, syrup and molasses, rolled oats, and sometimes even toilet soap, meals and tobacco. Where the firms cannot secure vegetables from the farmers or transport them in bulk, the table is supplied with vegetables in the evaporated form. Some firms substitute jam in a great measure for the more expensive butter. One Ottawa firm alone supplied four tons of the best butter to its camps this season.

A comparison of the following invoices, one dated 1890 and the other 1902, will give an idea of the change in supplies and prices wrought in the last 12 years alone. The 1902 prices are for goods delivered at the lumberman's nearest station, while the 1890 prices are f.o.b. at the city of shipment, the lumberman paying his own freight.

A run-over the invoices furnishes some interesting comparisons. In November, 1890, for instance, mess pork sold at $13 per barrel, short cut at $12.25, and long clear bacon at 7 cents per pound, as against mess pork $21.75, short cut $23.25 per barrel and 11⅛ cents for long clear in 1902. Yellow sugar quoted at $3.63 in 1890 fell to $3.38 in 1902, molasses at 42 cents per gallon in 1890 dropped to 27 cents in 1902.

INVOICE OF SUPPLIES—1890.

White beans, per bushel	$ 1.30
Syrup, per lb.	2⅝
Japan tea, per lb.	14½
Windsor salt, per bbl.	1.30
Split peas, per lb.	2
Raisins, per lb.	4½
Dried apples (not evaporated)	4¼
Prince of Wales tobacco	49
Brier tobacco	·53
Royal yeast	100
Yellow sugar	3.63
Molasses	42
Baking powder	20
Nutmegs	1.00
Brooms	2.35
Black pepper	15
Mustard	17
Common soap, per lb	4
Currants, hf brls	6

INVOICE OF SUPPLIES—1890 (Continued.)

Dressed hogs	5¾
Long clear bacon	7
Mess pork, per bbl.	13.00
Short cut pork	15.25
Beef (fresh), very little used	5¼
Pure lard	8¼
Compound lard (mostly used)	6⅞
Tub butter	14
Oats (car load delivered)	36½

INVOICE OF SUPPLIES—1902.

Prince white beans, per bush.	$ 1.60
Perf. syrup, per ½ bbl.	3⅛
Young Hyson tea, per lb.	16½
Windsor salt, per bbl.	2.15
Split peas, per bag	2.50
Rolled oats, per bbl.	5.00
Fos. raisins, per bbl.	7¼
80/90 prunes 50	5¾
Evap. apples No. 1	7¼
Figs, new	4
P. of W. tobacco	66
Brier "	70
Royal yeast	1.00
Rangoon rice	3⅜
Yellow sugar	3.38
Mincemeat	7
Soda biscuits	6½
Vinegar	18
Molasses, per pail	27
Bi Carb. soda, per keg	2.20
Ocean Wave bkg. powder	11
Nutmegs	50
Heavy brooms, No. 4, per doz.	2.75
Gem. scrub brushes	90
Pure blk. pepper	17
Mustard	10
Cream tartar	18
Quintals codfish	5.50
Shell castile soap, 2 lb bars	8
Crash towelling	7½
Linseed meal	3½
Corn meal	4.60
Comfort soap	3.75
Cld. currants	4¾
Gran. sugar	4.03
Tomatoes	1.25
Corn	85
Brl raw linseed oil, gal.	80
Crates jam	6¼
Lard 20/20	10¾
Long clear bacon	11⅛
Butter (good)	17½
Flour (Manitoba) car load	3.70
Fresh beef (car loads)	
Short cut pork, per bbl.	23.25
Mess " per bbl.	21.75

The following is the evolution of the present well laden camp table from the day of salt pork and hard tack twenty years ago. Pork and hard tack followed by beans and peas, followed by "black strap" or molasses, dried apples and bread, followed by tea and corn beef, followed by sugars, meals, dried fruits, fresh beef, biscuits, vegetables, butter, jam, etc.

In the culinary department there has also been a marked change, second only to that mentioned in the make-up of the bill of fare. No longer are the meals prepared and partaken of under the roof that covers the sleeping quarters.

With the introduction of the box stove by the American operators in Canada twelve or fifteen years ago, came the erection of separate buildings to house them. Meals are now prepared on the regulation stoves and served on the regulation tables. In the distribution the cook has the help of several assistants. There is a direct and inseparable connection between the introduction of the box stove and the extension of the bill of fare. The former made the latter possible. Roasts, stews, pastry, etc., which were difficult problems on the open fire place, are easily handled with the stove.

While the cook now has better facilities and better variety of material than formerly, more is expected of him, and he has to prepare everything down to doughnuts and pies. At some camps near the railways beef is received on the hoof and a daily supply of fresh meat is thus made possible.

If the cook is careless he can waste his month's salary many times over in thirty days. There is now on the part of the shantymen a natural desire to try a little of everything put on the table. His desire over-reaches his appetite, and right here there will be a considerable waste unless the cook who is entrusted with the distribution of the food exercises foresight. The men with a bill of fare ranging from rice to roasts are harder to please than in the days of fat pork and hard tack, when the height of luxury was reached with bean soup. Now-a-days there is but a small percentage of waste compared with former years, owing to the improved and economical preparation and distribution of the food.

It is a difficult matter to say whether or not the cost of running the camp table has been greater in recent years than it was in former seasons. This season's prices were certainly higher. Much depends on that staple article of camp diet, pork—which still finds a prominent place on the camp table, although in some camps, where fresh beef has been substituted, it is not so largely used as before the days of beef and a score of other articles of food, such as dried fruits. Pork was exceedingly high this season, forcing the cost per man per day up to 40 cents, according to the buyer for one leading local firm. The comparative cost ten years ago according to the same informant was 25 cents. Of course, if it should happen that pork would drop in price, a comparison would show that the modern table would cost less than the old time one. The introduction of dried fruits, etc., reasonable in price, and the falling off in the consumption of pork, would also have a tendency, if the "long clear" were low in price, to reduce the cost of the camp table. Much depends, however, on the "razor back" and the cost of other staples and the transportation.

While there is a greater variety of food than formerly, it must be remembered that the prices of sugar, rice, dried fruits, etc., which have been added in the interval, are comparatively low compared with that of pork, the staple food of the early days. Since their introduction the consumption of pork has fallen off, and right here a big saving has been effected. When it is remembered that mess pork has sold as high as $22 dollars per barrel, it can be seen that the substitution of dried fruits, syrup, corn beef, etc., at greatly reduced prices, is an economical move. Dried fruits can be secured at rates ranging from 4 to 7 cents per pound. Only the best grades are procured, as they are found to be the cheapest by the time they reach the camp table.

The extension of the railway system has reduced the cost of transportation, and hence made a big cut in the general bill of supplies which formerly had to be carried in by man and sleigh.

There can be no question, then, but what in the matter of food supply, conditions have been greatly improved in the last twenty-five years.

The development of the railway systems has also done much to facilitate the movement of supplies, men and horses to the limits. Thirty years ago all three had to be forwarded from Ottawa, for instance, by toll road to Aylmer, Quebec, and thence sent forward by ice or water, as the case might be, up the long stretches of the Upper Ottawa to the limits. Naturally this was a tedious trip, covering sometimes two and even three weeks. Now the same distance can be covered by the aid of the railway in a couple of days. Later on, with the extension of the railways, the Canadian Pacific Railway was used as far as Pembroke, and later still Mattawa was chosen as the point from which to strike off the railway. With the building of the Temiscamingue branch of the Canadian Pacific, Mattawa in turn lost its prestige.

In the bygone days as now it was the aim to get the supplies in to the limits during the winter season so as to take advantage of the snow and river roads. Naturally it required more men in the absence of the railroads to perform this transportation work, and gangs used to be employed the year round. Men who hired for the woods would frequently be required to give a hand in the movement of supplies.

Even at the present day the supplies for the Gatineau limits have to be moved forward by sleigh from Gracefield, the Gatineau branch of the Canadian Pacific Railway. It speaks well for the honesty of the shantymen that not a single article has ever been stolen despite the fact that the loaded sleighs are left open over night.

CARE OF RIVER SHOES.

Of interest to the lumber camps will be the method of calking and care of river shoes or boots. To calk them, first thoroughly wet the outer sole, then put a last in the sole that fits solid. Do not make too large a hole to receive the calk. Only drive them between two rows of pegs and in the center. Too many calks weaken the sole.

Shoes when wet should not be allowed to dry too close to a hot fire, as extreme heat will in a short time destroy the fibre of the best leather and render it worthless. Boots constantly worn in and around swamps or streams should be kept greased. A good preparation is one part of beeswax and four parts tallow melted together and then mixed with three parts of castor oil. The beeswax and tallow will keep out the water and the oil will make the leather soft and pliable. Do not apply too hot. Hot grease will often burn the shoe. Blood heat is the proper thing. Place one hand inside the boot and with the other rub the grease into the pores of the leather. Camp foremen should make a note of the above.

INSERTED OR CHISEL TOOTH SAWS.

Of interest to sawyers and all saw users will be the advertisement of the Jas. Ohlen & Sons Saw Mfg. Company, Columbus, Ohio, to be found in this issue. For over fifty years this company has made saws. Their grinding machines are immense affairs, weighing many tons, and it is impossible for a saw not to come out true. This company make and sell solid as well as inserted tooth saws, with four styles of chisel bit saws. Their "Columbia," 5 to 9 gauge, is adapted for use i British Columbia and on the Pacific coast. They also manufacture shingle, top, resawing, siding, concave and edger saws, as well as drag, grooving and mitre saws. The Ohlen Company's saw gummers, cutter grinders, groovers, ratchet drills, saw and yoke mandrels are favourably known all over the continent. Send for their free illustrated book.

The Rathbun Company have purchased McCormick & McLeod's tie and shingle mill at Baptiste, Ont., together with limits connected therewith.

THE CANADIAN SHANTYMAN

THE cycle of time, with its changes, has not passed by the shantyman—homme de chantier or bucheron, as he is better known where the French tongue predominates. Take him thirty years ago and he was a different man from his brother of to-day. In the early seventies, when industrial development was in its infancy in Canada, the shantyman was a power in the land. He was a husky chap, with muscles of iron and nerves of steel, as fond of work, and as steady and obedient during the working hours, as a well regulated machine. Year in and year out the same men worked for the same firms and the relations between employer and employee were as a rule cordial.

August found the man behind the axe on his way to the limits. Railway facilities were then practically unknown and a long journey by wagon and boat was followed by a tramp 75 miles in length, sometimes 125 miles or more. The following April saw the same man returning to civilization on the drive. Steady going chaps rounded the year out in the lumber business by accepting work for the summer months in the mills.

One year the wages dropped as low as $10 a month and board for shanty work, but the average ran from $16 to $18 and board. No one dreamed of securing the $28 and $30, with board attached, paid in recent years to inexperienced youths as well as able-bodied men.

There is no denying the fact that the shantyman as he was known thirty years ago is a rarity to-day. Where has he gone? Who has succeeded him? Speaking in general terms, the wave of prosperity has engulfed him and carried him into other channels of labor.

Speaking specifically, it may be stated that the colonization of the North-west and the newer districts of Ontario and Quebec, the wonderful development of the pulp and paper making industry in Canada, the strides made in railroad building, particularly in the west, and the attractions held forth by the industrial centers of the New England States, have all combined to lure the experienced men away from the limits.

Who have taken the places of the sturdy, old-time shantymen? Raw youths, farm help and mediocre mechanics from the towns and cities, attracted by the high wages offered, have stepped forward into the vacancies, which they fill only too often on the pay sheet alone.

Thirty years ago the employment agencies had little or no difficulty securing all the skilled help they wanted from the saw mill towns and central Quebec. In the last few years they have been forced to recruit from Eastern Quebec as well.

In passing it must also be remembered that the scarcity of good men is due in a measure to the increased demand. The development of the Georgian Bay district by American capital in recent years, and the reappearance of old time firms in the limits of the Ottawa river districts after several years' absence, have created an unprecedented demand, hence the presence in many camps of an inferior class of men.

A comparison of the shantyman of the seventies and his co-worker of the present day as men, gives everything in favor of the former. He was paid less money, had to undergo more hardships, was worked harder, and received poorer fare; but through it all he proved himself a man, loyal to his foreman and eager to break the record for the log-cut in his camp. He ate his pork and beans with better sense of appreciation and greater relish than is shown by the modern chap who over a bill of fare that excels the table of the average country hotel, clamors for the dismissal of the cook.

Operators agree that the labor problem is the great stumbling block in the present otherwise smooth current of the lumber business. In the seventies the man who earned his meal by his muscle had hardly any alternative in Ottawa and other lumbering districts but to hie himself to the limits for the fall and winter work. He could secure employment there when other avenues were closed by King Winter's iron hand. If there was a slump in the lumber market and wages dropped, it made no difference, $10 a month and board found him as ready as $18 a month and board. He asked no questions, his aim being to secure if possible service year after year with the same firm and foreman. The question of discomforts did not come to his mind, and a tramp of 75 miles made necessary by the absence of railroads brought no protest. Nowadays the shantyman who has to walk a third of this distance inland from the railway insists on working at an advance of several dollars over current wages.

The chopper in Ye Olden Days had an incentive to good work that was absent until recently. There was a brisk demand for hewers and scorers, and a log maker who showed a knowledge of his business was rewarded by the foreman with a "hand" at the square timber making. In a season he would become proficient at the latter and place himself in possession of a much fatter pay envelope. In the last decade, however, the British demand for square timber fell off to an extent that threatened extinction. Hence the log maker had no chance to acquire the knack of hewing and scoring, with its bigger pay; and about an equal opportunity to exercise his gift even if it were acquired. Thus the experienced square timber workers—a fair percentage of the shanty population—were also deprived of employment by the slump in the market, and while some of the younger scorers and hewers fell back on the log cutting, the older hands gave up the work on the limits altogether. Hence a class of very desirable men were lost to the work. This loss was felt during the past two seasons, when the boom in the square timber trade made a heavy demand on experienced labor. The supply could not fill the demand and the monthly wage rose accordingly to $55 with board.

In the seventies as nowadays, Ottawa was the great employment bureau for Ontario and Quebec, if not for the Dominion. Men flocked to the Capital from all parts of Quebec, much as political favor seekers do to-day. It was a rare thing then for an agent to have to go off his own street to secure any number of men. But with the development of the pulp and paper making industry, the colonization craze and the general industrial prosperity, the influx of men for the limits has grown less year by year. It's a case now where the agents have to get out and hustle and not the men. Last season several Ottawa firms had men scouring the country as far east as Gaspe. Many of the camps in the Georgian Bay district were manned direct from that far-off district.

While wages have been high in the camps for several years past, the financial consideration has not been sufficient to tempt good steady and experienced men in the way that lower wages did in former years. Why is this? Simply because the demand for the high class of laborers for other lines of labor has been much better in recent years, and the men even at the sacrifice of a few dollars prefer remaining in the bosom of their families, providing they can get steady work, to undergoing voluntary exile in the shanties.

Men must be secured for the limits, however, and hence it follows that the employment agencies have been forced to accept all comers and go out and look for more. The idle class of the towns, cities, and countryside, blinded by the glitter of the gold to the dross of the "shantying," have stepped in eagerly to fill up the gaps, only to drop out, many of them, at the first opportunity. These are the deserters who kick for fresh meat every day, and demand the dismissal of the cook if the fruit pies are not "sugared." In the seventies and early eighties fresh meat and pies were as rare as the parson's visit. It's commonly remarked that the shantyman of the present day has been spoiled by kindness, and events bear out the remark. In the earlier years, the outspoken foremen, brusque to the point of roughness, was considered just the man for the job, now he wouldn't be tolerated; and his dismissal would be clamoured for by the awkward squad forced upon him by the employment agencies.

In the days of pork and beans, when each man ate from the side of his bunk, the cook was a fixture year in and year out, practically unnoticed. Nowadays when the hotel menu is served in a separate shanty the cook is the subject of everyone's criticism. As many as four and five changes have had to be made in one season to satisfy the clamouring of the men who threatened to leave unless the cook was changed. The crank, the crook, and the cheat, are well represented in the shanties of the present day. In the days of the good old shantyman a "jumper" was unknown. Last winter the men were leaving daily, despite the fact that they were far better treated in every way than their predecessors. Young fellows with one and two years' experience are now demanding the wages paid men of ten years' experience.

The average shantyman does not cut as many logs a day now as did the cheerful, con-

tented chap of former days. There are several reasons for this falling off. In the first place, the man of to-day cannot handle an axe as well as did the man of a by-gone year. In the second place, the latter was cutting the virgin forest where the marked trees were well grouped, while nowadays the axemen have to cover a wider territory to get the same number of logs, so effective has been the thinning out process of the intervening years.

In the seventies the men hired for a whole season, which included fall and winter chopping and the spring "drives". Nowadays out of ten men seven come down ahead of the drives, despite the fact that they can earn $35 to $45 working on the latter. As a consequence the agents have to scour the country to engage other help. This year large numbers of Indians are being hired for the river work. To perform it they pass on the way men who are fleeing from it. Some of the latter go up again when they go "broke" in the city.

The passing of the genuine shantyman is not a catch phrase, it's a reality. It's hard to find one, where half a dozen stood in the seventies. Before the railways were built it took the firms two and sometimes three weeks to get a gang into the shanties, but the members stayed and worked there. While the presence of the railway now facilitates the inward movement, it also offers an additional temptation to the restless man to "jump" his job.

In one thing the shantyman of the seventies resembles his brother of to-day, he's a French Canadian, seven out of ten of "him." No other race seems to have made the same successful study of the business.

WIRE HOOPS FOR BARRELS.

The Washburn - Crosby Company, of Minneapolis, are disposed to look favorably upon the spiral-steel wire hoop for flour barrels. The type of barrel experimented with has borne four patent hoops and four wire ones, one of each being placed on the heads and one of each on each side of the bilge. The hoop being spiral in form can be readily driven and also is sufficiently elastic to conform to any changes in the barrel from the effect of moisture. In the past week the company have used about 4,000 of these barrels in sending flour eastward, and more of the hoops have been ordered. The present high prices for patent hoops are not relished by the company, and they aim to adopt substitutes to the end that they may in future avoid paying unduly high prices, whatever the supply of wooden hoops may be. The wire hoops are offered at less than $8 per M f.o.b. Minneapolis. — Northwestern Miller.

A BUSINESS GETTER.

Under date of April 16th the Hanchett Swage Works, of Grand Rapids, Mich., write to THE LUMBERMAN as follows : "We want to tell you again that we are very well pleased with the results that we are getting from your paper."

E. C. Atkins & Company, saw and tool manufacturers, Indianapolis, Ind., have received cable advice from New Zealand that the championship sawing contest held on Easter Monday was won by the party using the Atkins saw. Full details will be given later.

THE CANADIAN READING CAMP MOVEMENT.

BY A. O PATTERSON, M.A.

To be satisfied with the past or present state of things, and to be content that things should solidify as they are and remain forever fixed, is to cultivate intellectual torpor and spiritual inertia. Such a condition is at variance with the whole trend and impulse of this modern age. To keep abreast of the times, to move in the front rank and feel the breeze in his face is the ambition of the man of to-day. Probably he sacrifices too much, at times, in his eagerness to be to the front, but at any rate he is to be praised for his energy. The most ignoble of deaths to-day is the death of sluggishness and the most disenchanted of valleys is "Sleepy Hollow."

This energy and spirit of go-ahead in the 20th century, breeds an optimism and a faith that fears no obstacles. We see on all sides the most astounding results of human progress. So accustomed are we to the wonders of science and discovery unfolding to use very day, that we have almost ceased to marvel. We live in a sort of Arabian Nights atmosphere, and take these great finds and flights of the questing spirit of man as a part of the dramatic program for which we have secured our tickets and have a right to witness to the end.

N. N. WRIGHT & COMPANY'S CAMP, 12 MILES FROM CARTIER, ONT.

But heat is not applied to one part of the body without affecting the whole. If great energy is awakened along commercial and scientific lines, almost or quite as great forwardness of spirit is moving along the lines of social betterment. The 19th century has been significant equally by reason of its social and material gains. Indeed the one is quite the compliment of the other, or is contained in the other, as effect in cause. For wealth and prosperity is the food and life-blood of civilization. A weak, impoverished body never effects strong deeds or reaches the heights or profundities of human thought. Nor can a starveling people be a great people. Contrariwise to the glutinous man and pampered sensualist no entrance is given to the kingdom of higher things—and Rome's imperial head lay low when once she had drained to the dregs her Cercian cup of luxury.

Like the two pans of a scale, therefore, must our gains—material and social—be equipoised. Wealth is the blood and sinews of our people, but it is not the full man. It is the man in readiness for his journey, but some one must give him a goal. It is the man equipped for the fight, but some one must tell him how and what to fight. But the present age has been liberal in diffusing enlightenment, has exerted itself in many ways to secure a more wholesome, intelligent way of living, and is still going on to better things. The problem of the slums and submerged masses in great cities has been faced by the Salvation Army and others, and beginning to be solved. The question of child-labour in factories and mines has been treated successfully, the jolly jack-tar is no longer a neglected dog of the sea, going into periodical madness in port. The condition of the toiler everywhere has been alleviated and improved. It is recognized by all enlightened employers that to treat their operatives as machines or chattels causes a distinct deterioration in the work as well as in the workman, whereas the humanizing of their lot, liberating them from ignorance, recovering them from low and besotted ways, pays in every sense of the word. More and a higher grade of work is done because the operative is more enlightened, contented and industrious. One need hardly refer to examples such as the Patterson works, Dayton, Ohio, and others to prove the truth of such statements.

Of a piece with this improvement of conditions amongst sailors, amongst the masses in cities and operatives in factories, and in keeping with the enlightened progress of the age, is the work of the Canadian Reading Camp Association, called into existence and carried on by the enthusiasm and ability of its General Secretary, Rev. A. Fitzpatrick, of Nairn Centre. To shed the light of its civilization into all parts of its dominion is a country's work as much as the amassing of its wealth ; to exploit and build up its mental as well as its material resources. The workers in our lumbering and mining districts and railway construction camps are the pioneers in the opening up and expoliting of the illimitable richness of our fields, forests and mines. These men meet the brunt

of rude, primeval nature. They make the road which civilization in its graceful, easy carriage, may afterwards ride. Is it right that they should toil as mere cattle with dumb endurance, without that liberty and enlightenment of mind which gives freedom and elasticity to the step and clearness to the eye of the man who has been taught and understands? It is not well for our civilization to be a car of Jugernaut riding over the necks of vassals to its conquests.

Exterior View of Reading Room, Georgian Bay Lumber Company's Camp, 25 Miles from Coldwater, Ont.

Rather like an army with one thought, one purpose, one enthusiasm diffused through all, should we go forth as brother men to subdue and conquer the land so full of promise and erect the citadel of our country's greatness.

Of the numbers employed in our mines and woods there is no accurate census. But fifty thousand men or more are to be found in the lumbering districts of Ontario alone. Of these fifteen or twenty per cent. are unable to write their own names and three-fourths of the men are wholly illiterate. But even with an education the isolation and neglect which these men suffer for six or eight months of the year tends toward a rapid degeneration of the man. Without high thoughts to occupy him in his

Interior View of Reading Room, Georgian Bay Lumber Company's Camp.

leisure, low thoughts soon take possession of him. His toiling, eating, sleeping existence tends to animalism. The Reading Camp Association is endeavoring to change all that, to give these men the full rights of citizenship by keeping them in touch with the life of the nation. Reading rooms or shanties have been built in the lumbering districts of Ontario, Manitoba, and British Columbia, and these rooms are provided with games, current papers, magazines, music and books, to entertain and instruct the men in their leisure moments. The work is also being extended to railway construction and mining camps, and our popular Canadian author "Ralph Connor" is undertaking the building and maintenance of a reading-camp at a "mine-mouth" in British Columbia. Through the past winter eight young men—three of whom were college graduates—were employed as instructors in the camps. These men "roughed" it in the woods during the day, and conducted classes in the evening. The experiment was in the main satisfactory. Many availed themselves of instruction, and a general interest was awakened.

The centralization of all wealth, all culture and enjoyment in the great centres of population is a thing of the past. With us in Canada it would be absurd and an impossibility. Our greatness consists mainly in our agricultural area. Our citizens must live in their rural homes. They cannot circle in the immediate splendor of the city luminary and at the same time conduct their business of sowing and tilling. The city must come to them, must shed its light to them. It must and should be a reservoir or distributing centre to all the land of the knowledge and culture of the age. And this has come about in so much that the opprobrium of "hayseed" has fallen into the oblivion it merits. The farmer of to-day is well read and abreast of the times. The good roads movement and system of rural mail delivery being initiated are waves of the same tide that is now set from the city-centers to irrigate and enrich the country far and wide. The Reading Camp Association is merely setting its sails to this general breeze, in trying to enrich and brighten the lives of the hardy toilers in remote sections of the country. It is a work that appeals to our patriotism, our sense of justice and humanity. The Ontario Government was interviewed on the 11th of March last by a strong deputation of lumbermen and educationalists, and has promised the fullest consideration of the matter. It is expected that as a third of the revenue of the province is derived from its timber dues alone, that a liberal grant will be given to this very necessary work. The work has been begun in our prairie and mountain provinces, and will be begun next winter in Quebec, and it is hoped that Ontario will in this as in other matters, carry forward the banner of the nation's progress and glory, and the other provinces may be depended on to be loyal to the flag.

INDUCTION MOTORS IN WOOD-WORKING ESTABLISHMENTS.

In view of the interest which attaches to the use of small power in wood-working shops, it may not be inopportune to call attention to a striking example of the application of induction motors to the driving of shop machinery as afforded by the plant of a concern in Brooklyn manufacturing tobacco pipes and walking sticks. The plant consists of two buildings, a three-storey brick factory, 200x600 feet, and a small brick power house at a distance of but a few feet from the factory. The original intention of the operators of the establishment was to make use of direct current from the distribution system of one of the Brooklyn power companies, but a polyphase alternating system was finally installed on account of its many attractive features. Power for the factory is furnished by two Westinghouse two-phase compensated field alternators, driven by Corliss and Ball & Wood engines having a close speed regulation. Excitation is furnished by small multipolar dynamos driven from the main generator shafts. The switchboard contains three panels for generators and feeders. The main power system operates at 220 volts, and all motors are wound for this pressure. Lighting is also supplied from the two-phase mains, special balancing transformers being introduced between the 220-volt leads for the purpose of furnishing a 110-volt three-wire lighting service and equalizing unbalanced loads upon the lighting system.

Motive power in the factory is furnished by fourteen Westinghouse type "C" induction motors, varying in capacity from 5 to 20-h. p. The motors are belted to short line shafts, which, in turn, drive various types of belted machinery, including turning and mounting lathes, circular and band saws, buffers, blowers, drill and machine shop tools. The motors are started at a reduced voltage by means of Westinghouse starting coils, and when near synchronous speed are thrown directly upon the 220-volt system.—Carpentry and Building.

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance... $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

THE TIMBER POLICY OF THE BRITISH COLUMBIA GOVERNMENT.

The rapidity with which the lumbering industry of British Columbia is expanding, has impressed upon the government the necessity of adopting regulations governing the disposal of timber lands and cutting of timber that may be regarded as being permanent, that will be likely to give satisfaction to the lumberman, and ensure as far as possible a perpetuation of of the timber supply. British Columbia has not yet perfected its timber policy to the same extent as the eastern provinces. That it is proposed to do so is evidenced by regulations that have recently been put into effect. The task is not lightened by the peculiar conditions under which lumbering is conducted in that province. While in the east the timber limits are largely held by the saw mill owners, this is not the case in British Columbia, where a large portion of the timber area is taken up by loggers under special licenses. Thus in framing regulations the government feels called upon to consider the interests of both the logger and the mill owner, although they are sometimes diverse, as was the case with the prohibition of the export of timber.

Special licenses above referred to are granted for one year only, and entitle the holder to not more than 640 acres. They are not transferable, and are renewable only at the discretion of the government. It is claimed that these restrictions are too exacting, and that the industry has now reached a stage where the purchaser of a timber limit should feel more certain that if he should build a railway and make improvements for logging purposes, he will not be compelled to release his right to the property at the end of a year.

Conferences between the Loggers' Association and the Lumber Manufacturers' Association have resulted in the framing of a petition containing certain regulations which the government are asked to adopt. One of these is, that licenses be issued for a fixed term of not less than five years. Another is that holders of licenses shall commence operations within three months or forfeit their license, and another, that licenses shall be issued only to parties engaged in logging or manufacturing lumber. The two latter clauses are, in our opinion, very important, as their adoption would remove the opportunity for speculation in timber limits which now exists and which has grown very rapidly of late.

The recent regulation providing that no special licenses to cut timber be granted until after the limits have been surveyed, is strongly opposed by the lumbermen, but as the Honorable Commissioner of Crown Lands seems disposed to assume an attitude of justice and helpfulness towards the lumber industry, it is probable that any grievances will be remedied, and that eventually a timber policy will be framed that will be satisfactory to the lumber trade and in the best interests of the province.

CANADIAN TRADE AND THE TARIFF.

Canada has too long suffered from fear. Business men have lacked the confidence necessary to inspire them to launch out and capture the greater percentage of foreign trade which was their's for the seeking. Living as we do beside a country of less area, but with a population ten times as great as that of Canada, we have realized our lesser commercial importance to an extent that has proved a barrier to our advancement. This timidity, it is pleasing to observe, is atlast passing away, and in a very few years Canada promises to be one of the great manufacturing countries of the world. It is not possible to read the statistical trade reports issued by the government without feeling encouraged. For the nine months ending March 31, the value of our exports was $162,420,763, and that of our imports $155,440,036, an increase of $17,873,890 and $14,707,327 respectively. This showing of trade expansion is suggestive.

The trade policy of Canada at the present time is one of moderate protection, a policy which, it may fairly be said, is giving satisfaction to the majority. For this reason the budget speech of Honorable Mr. Fielding, Minister of Finance, in which he promised no radical tariff changes, was well received by the country. Mr. Fielding pointed out that there is nothing in the circumstances of the country calling for a general revision of the tariff.

Touching upon the preferential tariff, Mr. Fielding held that a return preference should be given by Great Britain. The Canadian Government had offered, if the British Government would accept the principle of preference, to give Britain a certain preference in the Canadian market. But this, he made quite clear, would be a preference as between the British and foreign manufacturers, not as between the British manufacturer and the Canadian manufacturer. In this he showed the protective sentiments of the government.

The imposition of a surtax of one-third, intended to apply particularly to German goods, will doubtless meet with the approval of Canadians. Germany has long discriminated against Canada, and all effort to induce a discontinuance of the policy have been futile. The result of the surtax will doubtless be to decrease our imports and exports from and to that country, but in this we have everything to gain and little to lose. Canada annually buys from Germany goods of an approximate value of ten million dollars, whereas our exports to that country do not exceed one million dollars in value. Nevertheless, we are told of further retaliatory measures to be adopted by Germany.

It is pertinent to enquire who is likely to be benefitted most by this surtax on goods imported from countries which discriminate unduly against Canada. The surtax is not thought to be applicable to the United States, which, in respect to geographical position and physical equipment, is favorably situated to realize any benefit that may accrue therefrom. The United States press take the view that the new tariff gives that country a distinct advantage over Germany of 33⅓ per cent. in the Canadian market. This, however, will surely depend upon the attitude assumed in future towards Canada, as a policy of inequality will doubtless result in the application to United States imports of the same retaliatory measure which now applies to German goods.

Canada is desirous of cultivating trade with the United States, on a mutually profitable basis, but the Minister of Finance makes it plain that we will not chase after recriprocity. He is agreeable to a resumption of the Joint High Commission, but if after a preliminary friendly conference it should appear that the American representatives had no reasonable propositions to make, negotiations would be concluded at once.

EDITORIAL NOTES.

The placing of a contract for timber required by the Ontario Power Company for flume purposes at Niagara Falls has created some comment. The contract, which embraces several million feet, has fallen to redwood manufacturers of California, who, it may be presumed, were the lowest tenderers. To assist in securing the order, the Southern Pacific and Santa Fe Railways offered a through rate of 50 cents per 100 pounds of green redwood weighing 3⅓ pounds to the foot, or an average of $16.66⅔ a thousand feet. This rate is regarded as a very important event in the redwood world.

Perhaps never before in the history of the lumber trade have freight rates to Great Britain been so low. The rail rate on lumber from the Georgian Bay to St. John, N.B., is about 12 cents per hundred pounds, and from St. John to Liverpool 14 cents, makinga through rate of less than nine dollars per thousand feet. The rate from Georgian Bay to the Eastern States is between five and six dollars per thousand, or only three dollars less than to Great Britain. Yet the United States is getting the lumber, which is explained by the indisposition of buyers across the water to pay the advanced prices resulting from increased cost of production.

LOGGING METHODS IN BRITISH COLUMBIA.

By Henry H. Newell.

The logging industry of British Columbia is as yet in its infancy, and a very precocious infancy at that. The improvement of logging methods has more than kept pace with the general progress of the country. Enormous areas of timber limits lying within easy reach of salt water or large rivers have been eagerly sought and secured, and work upon them has proceeded with none of the speculativeness, and with fewer of the natural hindrances that have been experienced in the mining industry. The development of agriculture, too, has been beset with many natural drawbacks which have somewhat checked its advance in this age of competition; but logging has triumphed all along the line. To-day the logging and lumbering industries in British Columbia dispute with the salmon canning industry the palm of progress in the most modern methods and most effective results. It is not many years ago since the logger went out into the woods equipped with little more than axes, ropes, and teams. Now he creates a veritable industrial vortex as he pushes on strenuously with his railways and all-important donkey engines, and moves forward his bustling and cheery camps through the hitherto trafficless forests.

In British Columbia the forests are dense and in places almost impenetrable, and the impediments to the transport of provisions, of machinery, and finally of timber, are characteristically great, in spite of the country's many invaluable waterways. The finest timber rarely grows quite down to sea water. The packer and the pack-horse had their work cut out for them in the early days. Later the light wooden railway with horse or human traction considerably assisted the labors of of the pioneer; but now, the iron rail is laid length by length from the sea beach, reaching slowly but surely into the furthest depths of the forest primeval. The all prevailing difficulty of transport in British Colnmbia has, in the matter of logging, been practically overcome for coast and island timber limits, and for those situated on rivers of sufficient size to float down the logs to the sea; but an important question facing timber men to-day is the utilization of the enormous and magnificent areas of valuable timber which are spread throughout British Columbia's uplands and inland valleys.

Logging methods on the mainland coast and islands necessarily vary to some extent from those up country—in the Kootenays for instance—but the great bulk of the logging in the province is done on the mainland coast and on Vancouver Island. The Victoria Lumber and Manufacturing Company's logging camps on Vancouver Island may be taken as in every way representative of the most efficient and modern methods of logging conducted in British Columbia to-day. The company's mill at Chemainus—the largest in the province—is capable of turning out, in the ordinary way, 320,000 feet of lumber per day. The timber used does not all come from their own camps—some 10,000,000 feet of timber is annually supplied to them by the neighboring Cowichan Lumber Company—but these camps are amongst the largest in the country, and the principles which govern their logging methods are those of the most up-to-date logging camps in the province. The mode of forming and conducting their logging camps is roughly this: having first caught their hare, that is, acquired their timber limit (and they own some 120,000 acres in the Esquimalt and Nanaimo Railway belt), the next thing to do is to survey it and build a railway, to form a camp and lay out their yarders, or landing stations, and then to send the fallers in.

Railway construction through the marketable timber extends about half a mile at a time. The railway to the Victoria Lumber Company's operations is now seven miles to the first camp, and three miles further to the camp where the fallers are. The rails are heavy, of standard gauge, solidly laid, and the road is well ballasted. Spur lines from the main track cover the whole working field. On everything over a 4 per cent. grade geared locomotives are used. Engines geared 2½ to 1 operate on 14 per cent. grades, but it is not considered advisable to work on grades of more than 10 per cent, except for short pitches.

The camp is built as near as possible to the centre of the timber, the proximity of water being, of course, a governing feature. The camp site is chosen on either side of a small running stream, or else a channel of water is conducted through it. The banks of this stream are planked, forming wooden sidewalks along which the bunk houses are built. The sleeping quarters are thus arranged on either side of a planked alley with a stream running down its centre for washing purposes. The bunk houses are built of matchwood, and are each separate with a wide space between. They are 12 feet x14 feet in size, and each accommodates five men. The cook house, store, and dining room are combined in one building 24 x 80 feet. The wages of the men range from $2.50 to $4 a day, out of which they pay $5 a week for their board. This costs the company 58 to 62 cents per man per diem. The food consists of soups, mush, fresh meat, vegetables, pies, etc., and indeed in this, and in most of the camps in the province, the board is equal to that of a good hotel. The company aim to have 60 men working continuously in camp, summer and winter. Health statistics of nearly all British Columbia logging camps are exceedingly favorable, and epidemics practically non-existent.

Having reached marketable timber the yarders are formed. The yarding station is the centre of operations. Here is erected the landing with a platform about 3½ ft. 6 in. high, the height of the log bunks, for facility in loading the logs on to them. Here is also placed the double drum donkey engine, securely made fast. Each yarder embraces an area of approximately 1200 feet. It is found that an area of 600 feet each way from the landing is the greatest that can be conveniently and economically worked by the donkey engines. The timber having been fallen is sawn into 20 to 110 feet lengths by the buckers, and, the swampers having cleared the ground around them, the logs are handled with the aid of miles of wire cable, and drawn to the landing where they are loaded on to the log bunks. The log bunks are so formed that they can be coupled nearer together or extended to suit the various lengths of timber. The skidways are usually laid about 1200 feet apart. Along them logs are drawn by cable to a double drum loading engine on the main track, this engine being equipped with 1 mile of 1 inch cable and two miles of ⅝ inch cable. On level ground a horse is used to draw the ungrappled end of the main cable from the loading engine back to the skid engine (which gathers the logs on to the skidway), but on hilly ground the second drum of the donkey with a ⅝ inch cable is used for this purpose—an endless cable being formed. For "trailing" over parts of the track which may be 100 steep for the cars the roadbed is planked with 2 inch planking and the rails protected by scantling, and a 25 ton "Climax" geared engine is used for traction. Several heavy "turns of logs" are thus often drawn at one time to the loading station. A 40 ton Shay locomotive collects the loaded cars, and makes up the train generally, drawing it to the main loading station, where a powerful road locomotive takes charge and conveys the log train to the company's wharves at Chemainus, where the logs are dumped into the water and "boomed" ready for use in the mill. The cars are loaded five to seven thousand feet to the car.

A general crew for a yarder varies from 15 to 21 men, according to the nature of the ground and the season of the year. It comprises 2 fallers, 1 undercutter, 2 buckers, 2 swampers, 1 to 3 barkers, 1 to 3 snipers, 1 signal man, 1st and 2nd hook tenders, 1 rigging slinger, 1 dogger, engineer and fireman.

A road engine crew consists of 5 men, viz., engineer and fireman, 2 loaders, and 1 hook tender.

The question of the nationality of the woodsmen is an interesting one, but one almost impossible to determine accurately. Roughly speaking, about 10 per cent. are Swedes and Norwegians, a few British, and the remainder in about equal parts Canadian and American. This holds good throughout the province with the exception that in places near the boundry the American element predominates, whilst in others more remote Canadians are the more numerous. Native-born British Columbians have the best name as expert woodsmen.

The Shawnigan Lake Lumber Company, operating a smaller mill some 30 miles south, and also on the E. and N. Ry., has its own logging camp in the neighboring woods. This company, instead of a railroad to its logging operations, uses a pole road. The poles are cut in the wood on the spot and laid, half buried in the ground, in lengths the ends of which are cupped into each other. If a sufficiently curved pole cannot be found in the woods it is curved during the process of laying down by means of a brace from a convenient stump, one end of it having been pinned into the preceding pole. The donkey engine then with a cable bends it to the required curve, when it is secured by pins and another opposite brace. Curves of as much as 33 degrees have been negotiated satisfactorily on this road, but the object is to keep as straight a track as possible. For bridging, poles are laid crosswise over one another in grooves until the desired elevation is reached and the uppermost poles then serve as the traction lines for the engine. The locomotive is a 17-ton geared "Climax" with grooved wheels 13 inches wide, and having three inch flanges.

A road gang is here continually working just ahead of the fallers. The foreman goes ahead, and "blazes" the trees where he wants the road to go. If he wants it to the right of the tree he puts his blaze to the right, if to the left he blazes to the left, and if straight through then he makes his chip in the centre. The swampers come in, and after them the road gang lay the pole road keeping, as straight a track as possible. The methods of handling the logs are the same here as already described, though on a smaller scale.

Yet a third and older method of logging is that pursued by the Cowichan Lumber Company, who employ a contractor to do their logging for them. Their timber is at present being taken out mostly in proximity to Cowichan Lake, or near river banks, where the logs are fallen and collected during the year, and in the month of November, or thereabouts, are floated down the Cowichan and Koksilah rivers, which are then in flood, to salt water at Cowichan Bay, where they are boomed and towed round to the Chemainus mill. These limits can be efficiently and more economically operated by means of skidways and horse teams alone. Greased skidways are formed in convenient places upon which the logs are drawn down to the water. A tree having been fallen the swampers come and clear a track for it to the skidway. A team of eight horses is yoked on, and away goes the log. This method requires great judgement on the part of the logger, for the logs will only travel on their heaviest sides, and unless so drawn they will roll over and twist and tangle up the chain.

This method of logging again is yet an improvement on the more ancient system of drawing logs out of the forest with long unwieldy teams of oxen. The way had to be swamped out for them and serious obstacles removed at considerable labour and expense. It is instructive to compare this old fashioned system with the operations of the wonderful modern donkey engine. It stands secure in its central location with its furlongs of cable stretching like long sinuous arms on either hand, and the heaviest and most ponderous log, once grasped, obeys its invincible pull, and smashes and tears its way through the thickest scrub at the guidance of the hook tender until at length it arrives with a dull thud on the landing ready to be loaded for the mill. Indeed, everything in modern logging depends on the "donkey." It needs to be treated like a new-born babe. If it refuses to work practically all work stops. The fallers are only required to keep a log ahead of the engine, and being ahead of their work they naturally take a rest and have a smoke. The buckers who have to follow them do the same and so on. Logging under such circumstances does not pay. It pays to get the best possible "donkey" and to treat it well.

By the last Government Reports no less than 453,251 acres of timber limits are already held under lease in the province of British Columbia (without including the enormous timber rights of the E. & N. Railway on Vancouver Island). During the year 1902 upwards of 187½ million feet of timber were cut from Crown lands, 56½ million from leaseholds, 7½ million from private property, and 30¼ million from the E. & N. Railway belt. Of the last named amount five-sixths was cut by the Victoria Lumber & Manufacturing Company.

Clarke Bros., of Bear River, N. S., have recently built a dry kiln and made other improvements to their mill. By the installation of planers, matchers, etc., they are in a position to supply spruce sheathing and hardwood flooring.

A VISIT TO THE WISCONSIN LUMBER CAMPS.

(BY OUR TRAVELLING REPRESENTATIVE.)

As the leading producer of white pine of all the States, Wisconsin has some very large logging camps. Most of them are situated in the north-central part of the state and reached only by logging roads.

The Diamond Match Company's and the Williamson-Libbey camps are well known. In conversation with the leading operators they all said the past season had been exceptionally favorable and a successful one. There was plenty of snow, about eighteen inches and two feet on the level, and enough cold weather to make it stay.

Regardless of the fall of snow, Wisconsin loggers now use ice roads and sprinkler wagons to make them, depending only on cold weather for the success of the season, rather than on the fall of the snow. Too much snow, I found, is the only thing that loggers fear nowadays, but that condition did not prevail during my trip through the state. In fact, the weather was just right—cold enough to keep the roads hard, but not too cold to work. One evening just as the men were completing their day's work rain fell heavily and the snow went fast. Everybody thought the season was ended, but during the night it turned very cold, froze up, snowed and hardened the roads again.

Small-pox and grippe were very plentiful in the woods this year, but the former was of so mild a type that little attention was paid to it by the men. Several were laid up by small-pox for three or four days, and then would be at work again inside of a week. There seemed to be no fear of it and few of the men "stampeded." In one or two camps, I was told, all the men had it. The greatest precautions were being used to prevent the germs being taken out by the men when they returned home in the spring.

Men to work in the woods were so scarce in Wisconsin this past winter that it has been necessary for the loggers to pay the very highest wages prevailing in many years. The camps have also had to furnish a table that would do honor to many of the best hotels I stopped at. Even then it has been difficult to keep a full force, and there were few camps where the personnel of the employees had not materially changed since the opening of the cutting season.

Desperate measures were resorted to in order to keep the men from shifting from camp to camp. Chief of these was in the furnishing of superior food. One camp had brought in no less than two tons of mince-meat. Nearly all the camps that I visited had sent in immense quantities of canned peaches, apples, beans, corn, tomatoes, etc., whilst puddings, cakes and pies were of daily consumption.

If the men were poorly fed some of the "lumberjacks" would tell a tale of how fine the boys were feeding at Camp 20 on the Ontanagon river, which would result in wholesale desertion to the best fed camp.

At some camps novel forms of amusement had been introduced in order to influence the men to remain. Music boxes and phonographs were installed at several, playing everything from "Ain't dat a Shame" to "In the Mansion of Aching Hearts." In one of the largest camps a piano had been furnished, together with a paid pianist and a vocalist.

Other companies supplied their camp with plenty of reading matter, both in daily papers and novels, of which the men have free use as soon as their days' work is completed and on Sundays. Very few men have quit the employ of the concerns giving them these inducements to remain.

I saw a lot of card-playing, dice-throwing, checkers, dominoes, etc., but very little gambling and practically no drunkenness.

There is something picturesque about these Wisconsin camps, situated perhaps on the side of a stream, half a dozen or so shacks with a larger "shake" roofed shanty, twenty by fifty, built of pine logs,cracks stuffed with moss and old leaves.

To the eye of an artist it is the ideal of the picturesque, the ends of the logs alternating across, showing their white and year-ringed sections against the dark bark—the low, broad entrance with its door on wooden hinges and latch. All this framed by the noble, tapering stems and dark evergreen tops of the gallant old pines which seem to be standing there under sentence of death, awaiting the execution. To the ear as the storm whistles through the forest it seems like a vast orchestra of Eolian harps swept with music as wonderful as the varying wind.

Inside the shack it was comfortable and warm to the tired chopper. The atmosphere was one of a mixture of shoe-packs, sox and mitten steam, tobacco smoke and three or four foreign languages, through which could be seen long rows of "bunks" from the muddy floor to the top log under the rafters. The bunks would be filled with marsh hay, two coarse blankets and perhaps a tired form within them.

Let us inspect the cook's shanty. Rough, smoked logs, yellow light, rude table and benches, iron handled knives, tin cups and plates, a smell of cooking meat with an undertone of fried cakes.

To get to one of these modern camps it is not necessary to walk or take a team. We get on an empty logging train and we are landed at the loading place right in the camp. Here all is bustle and a strenuous life. All round are piles of logs, the sound of the keen axe ringing and re-echoing through the forest.

Then the loading begins—a rattling undoing of the binding chain, a scoot of skids on sway-bars, throwing of the loading chain, a number of dexterous cant-hook "flips," and the bunks are full. Another and another tier on top—then the "top loading" or putting a peak on the pyramid of logs. On the top of the growing load is a man of agile proportions, clad in a knit toque, red undershirt, grey pants and spiked "drive" boots. "Chain over!" he calls and they are ready for the binding logs on that chain. Two more up, and he calls "Up, the long skids!" Swamp hook in top log, loading chain around log on skids, under and back to swamp hook, team of horses on the other end. All ready! "Gee up!"—up the half pitch majestically rolls the big stick. The man on top, called the top loader, yells "Whoap!" and the horses dig their shoes in the ground and the log stops half way up. The top-loader sees to the log being straight, and is located, alert and cool, on top of the cone, waiting for that apex log, with a "cant-hook" that seems a living part of him. The "swamp-hook" is hooked to fly out when the upcoming log drops in its place. The top-loader never allows that swamp-hook to touch the ground till the last log is up. Now comes the nip. She breaks over upon the top! "Whoap!" The cant hook flips, and the car is loaded. I look at my watch as the top-loader looks a query at me. Time, nine minutes and twenty seconds.

As they shove this carload out of the way for another empty, I go up the track to a half-filled skidway of two parallel logs, six or eight feet apart, used to roll other logs on for storage. Here I saw the skidder and his big grey team. I note the dress of the "boss teamster" —a pair of rubber shoes, black German socks reaching to the knee, dark pants, somewhat pitchy, leather belt, sheepskin lined jacket, a black moustache and a Windsor cap. He is rolling the logs off his "toad" —two iron shod runners six inches broad, three inches thick and six feet long, with a beam for the log to rest on across the middle.

Next I see the "swamper" in among the great masses of the tops of fallen trees. He is called a "swamper" because he is usually swamped in brush. The teamster calls him the "brush monkey." His work is to get the brush out of the skidder's way while he is being sworn at by the rough teamster.

Now, the two logs and toad lie parallel, chain around end of toad-beam, under one log, up and back to the evener on the other side, two horse-steps and the other end of the log lies on the beam even with the toad nose. These logs are too large to roll on with the swamper's cant hook. Again and again this operation is repeated. The swamper bites off a large moon of plug tobacco and extends the same to me. "No thanks!" He does not say it, but his eyes look it—"Tenderfoot!"

I follow the sound of a rapidly running cross-cut saw. The ground is gently undulating, smooth, and spread with a carpet of the yellow tresses from the giants around. There is a pair of sawyers—one carries an axe and wedge with wood filled socket, the other a ten foot pole and a handled band of steel, tough as a Damascus sword blade. They look at a tree which to me seemed upright as the zenith, but the axeman chooses a leaning for it, and now the chips begin to fly from the notch, no very deep cut, just enough to guide the falling tree.

They hold the saw on the opposite side of the tree, and a jet of yellow dust marks every stroke of the singing steel. When cut two-thirds off a stiff breeze levers the top back, and the saw suddenly stops, "She pinches! Put in the wedge!" In it goes behind the saw under the blows of a four pound axe till the cut opens. "Zip, Zip," they keep right on till the great pine starts and staggers. "Timber—look out!" rings through the forest, the tree moves, cracks, the branch top hisses through the air, the sawyers have side stepped twice backward from the stump, a sound of rumbling thunder and shaking earth. One of the sawyers steps up and calculatingly pokes a measuring pole along the trunk, heretofore scaled only by the squirrel or woodpecker.

The dinner bell rings, a hundred or more keen appetites rush for the men's shanty to get ready for the meal. I follow and see clean trunks around the walls, and to my astonishment white sheets and pillows, shaded hanging lamps, newspaper covered tables. No dirty tramps allowed in these beds, shanty boys of the seventies and eighties you will not believe it. But ye hardy Canucks, 'tis true.

At the door of the cook-shanty, no swearing, bare-armed bull-dog cook, but an orderly family, real women cooks and girls to wait on as fine a table as any hotel for a hundred miles around.

What did they get? Well, to begin with, a good vegetable soup, pork pie, roast beef, pickles, sweet cake, apple pie, coffee or tea, with potatoes, canned tomatoes and string beans. This is varied every day, the "boss cook" tells me. In one of the camps only men cooks and "cookees" were employed. The latter are helpers, generally two for every cook, and the boys call them "bull-cooks."

After dinner the boys have a smoke, until the teams are brought out for watering. Clean and glossy are these horses, and the harness well oiled. The men scatter to their various posts.

In the camp I hear a sound like the squeak of a guinea hen—probably a little too sharp and steely. It is the "filer." With a saw set in a filing horse, breast high, and two or three other blades lying near, you see the man who sends to the sawyers a perfect, sharp saw. To "fit" a cross-cut requires years of practica use of the saw. He lightly planes the cutting teeth and cuts the "rakers" an eigth of an inch shorter than the cutting teeth for the purpose of pulling out the saw dust.

As the early winter twilight slips like a flowing curtain down the eastern sky, I imagine I will hear in dreams to-night the distant crash of the falling timber, see the swing of the steel blade and the rolling of the barkey .og, while the beauty of earth before its devastation by man enwrapped it all. As I go into the camp again the savory smell of supper mingles with the life-givng aroma of the pine. After supper there is music, songs of all description, "ancient and modern," games going on, all seen through much tobacco smoke. Before nine the tired laborers are pulling off their socks at the bunk's edge as the lights flicker out.

What is the song of the plumy pine
When gather Night's dreamy shades,
And the tender eyes of the watch-stars shine
O'er his quiet, sleeping glades?

Whispering, whispering, "Sleep, calmly sleep!"
"Lullaby, lullaby," whispering deep.
On thro' dusk dreamland, a soft rippling stream
Bears the tired toiler wrapped in a dream.

In one of the camps I met a timber estimator, or what is known in Wisconsin as a "land-looker." Pretty much all the timber has been looked over dozens of times so that this calling has rapidly died out. This particular "land-looker" told me he had "packed it" on foot for days over miles and miles toward his "descriptions," without seeing a living thing, except wild animals in the forest or the birds. Keeping a sharp lookout he sees a little axe-mark on the side of a tree —probably made years before. Bringing out his compass he consults the portion of the "blazed" tree, which tells him at once whether that tree stands on an

east and west or a north and south government survey line. He follows the blazed line, keeping an eye out for "witness" trees which mark a section corner or quarter post. Arriving at his description his duties consist in determining the amount and quality of the timber on the land, the facilities for logging, and the "shape of the surface," which he records in a book.

The land-looker said :—"I have tented for weeks in the Upper Peninsula of Michigan, Wisconsin and Minnesota, when the snow was five feet deep in the pine woods, and have had to dig down into the snow under my snowshoes to find the government blazes and scribe

THE PATENT WISCONSIN CAMP STOVE MANUFACTURED BY WATSON BROTHERS, MARINETTE.

on witness trees, with a temperature at 40 below zero.' He also stated that he had travelled for many miles on snow-shoes, the intense cold so contracting the strings that walking on them in the crisp snow produced a squeak like a harsh violin note. At that time their diet consisted of oatmeal, cornmeal, condensed milk and flour. From the latter they made a "dough-god" or "cold-shut." This with coffee and pork was considered good living.

He said, "I have been attacked by wolves, been pulled out from under the ice of a freezing lake, and had my blood chilled by the catamount's screech."

Some of the old cooks have been in Wisconsin since they started to "clean out" the forest. In conversation with many of them I found that they had some brilliant ideas. Among other things they knew of was the fact that fresh meat beginning to sour, will sweeten if placed out of doors in the air over night, and milk which has changed may be rendered fit for use by stirring in a little soda.

One of the foremen told me that the getting of good footwear was a prime necessity. Herold Bertsch Co. & Rindge, Kalmbach, Logie & Co., of Grand Rapids, had a good name in the Wisconsin camps.

One of the "cookees" said that kerosene will soften boots or shoes that have been hardened by water. I saw him put a teaspoonful of turpentine in a boilerful of white clothes. He said it was to whiten them." They say it does.

The cooks are all interested in a good camp stove or baker. The Patent Wisconsin Camp Stove made by Watson Brothers, Marinette, they say, is the most convenient stove ever seen in Wisconsin camps. It is adapted for the woods, on the drive or by the cruiser. It bakes as perfectly as the finest high priced range for from ten to one hundred men. I personally saw two of these stoves and they are marvels, inasmuch as they can be used out doors or in a tent, unaffected by rain or weather, baking perfectly. This stove is a portable one, because I folded and carried one myself to feel and know what a portable stove is like. These stoves are used exclusively by the Wisconsin River Boom Company, the Hamilton Merryman Company, and the largest operators in Wisconsin, because they claim they do the work of high priced stoves and ranges and do away with open fires which have caused so much destruction to the forests.

I enquired from the cooks and supply buyers as to the leading supply houses and whose product was liked the best. Most all of them mentioned Swift & Company, Omaha Packing Company and Schwarzschild & Sulzberger, whose beef, pork, and other products were always first-class and well liked by the men.

There is not so much drinking now among the men after the camps break up as formerly, but hundreds of snares are laid for them when they come out with their hard earned money in the spring.

At Green Bay I saw this notice in one of the papers :—

"It will soon be time for the boys to come down from the woods now and Marinette booze dispensers are getting ready to give them the glad hand."

At Green Bay as well as other points I saw these and similiar signs posted up conspicuously in saloons and liquor joints :—

"LUMBERMEN'S REST."

"Eat and Sleep here FREE." "Hot Soup FREE all day." "Roast Pork and Mashed Potatoes on a plate FREE

With Every Drink."

"Free Meals all Day and all Night.

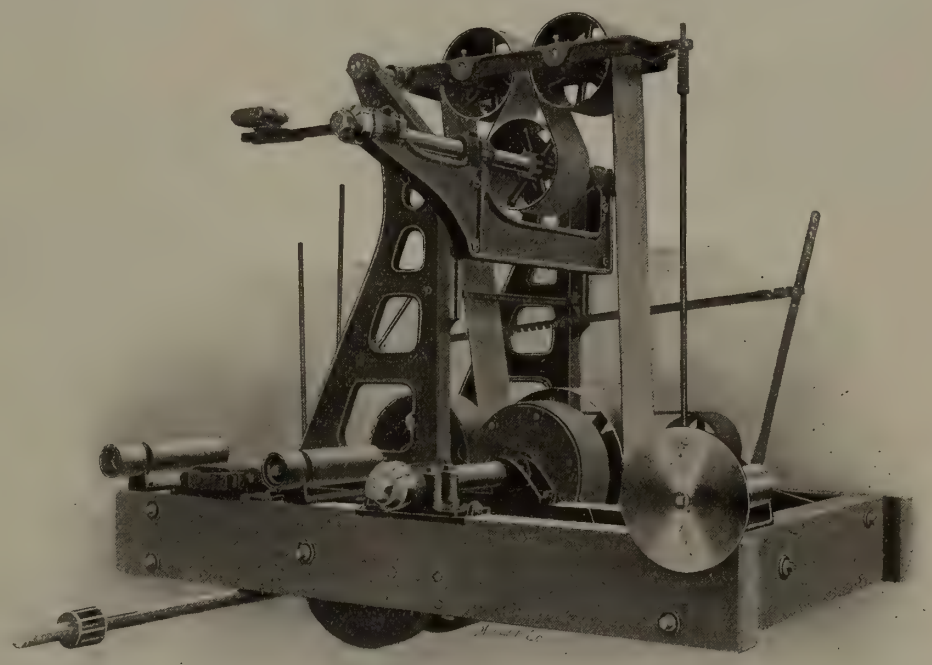
Come in Boys!"

These signs with alluring music get the boys in the dive. And the keepers of these dens are not philanthropists.

LABOR SAVING DEVICES.

We present herewith an illustration of the double mill with reverse top saw manufactured by the Knight Manufacturing Company, of Canton, Ohio. By combining those points which long experience have proven to produce the best results, this company claim to have in their new line of saw mills met all the requirements of a strictly up-to-date light portable or stationary mill.

The Knight Manufacturing Company's improved variable belt feed has all the valuable features contained in feeds of this class, together with those using the friction disc principle. They believe they have safely overcome all the objectionable features contained in various styles of feeds. All movements are controlled by one lever and the feed and jig, thus always under perfect control of the sawyer.



DOUBLE MILL HUSK MADE BY THE KNIGHT MANUFACTURING COMPANY, CANTON, OHIO.

Knight's steel head block and knee is made in two styles, single and double beam. The forged steel knee securely riveted to a steel base makes a rigid construction adapted to severe service, and the cut rack with cut steel pinion machined from solid metal secures absolute accuracy. The scale is attached to the top of the knee with which it travels, while the pointer remains stationary, permitting of easy reading from any part of the carriage. They also build this style block with a taper attachment, now considered a necessity in modern mills.

Knight's No. 2 single acting friction set works is designed for use on medium class mills and when desired can be furnished with sawyer's lever. The operation is similiar to all single acting set works, coil spring or friction receding devices are used, a brake wheel and lever are not required. The accuracy of nearly all set works depends largely upon their freedom from lost motion. This is especially apparent after the set works have become worn, as the wearing of every joint in them accelerates inaccuracy. They do not depend upon the travel of the lever to regulate the setting, but govern the distance the friction wheel revolves between positive stops for the thickness required. Therefore, any lost motion in the lever does not affect the accuracy of the set works.

Of special interest to all furniture, piano or interior finish men is Knight's Special Quarter Dog, designed for quarter sawing. It is not necessary to turn the quarter when the center is reached, thus saving the centre board, which is the widest and most valuable. The last board can be cut as narrow as one inch.

This company also make single and duplex dogs, swing cut-off saws, single saw side edgers, Dixie gang edgers, lath, picket and bolter machines, binders and trimmers, solid and inserted tooth saws, saw-mills, trucks, etc. All interested should get their beautiful new book of photogravures, sent free upon request.

POWER TRANSMISSION ECONOMICS.

"Power Transmission Economics" is the name of a 20-page publication to be issued monthly by the Dodge Manufacturing Company of Toronto, and which will make its debut in a few days. This little publication is issued with the view of giving the latest information in regard to the economical distribution of power, and while a good part of its space each issue will be devoted to descriptive matter concerning special transmission machinery manufactured by this concern, space will be given each month to matters of special interest to the manager and head of any manufacturing concern. In the course of its publication, Power Transmission Economics will give a history of the origin and perfection of the rope drive. The May issue contains the first chapter of this interesting story, and every man interested in power development will not find his time wasted by a perusal of this article. Power Transmission Economics will be sent gratis to anyone sufficiently interested to write for it, and a letter to the Dodge Mfg. Company of Toronto will bring this publication to your desk each month.

The Niagara Falls Power Company has contracted for 3,000,000 feet of California redwood, which is to be used for the construction of water conduits in place of steel. Experience shows that the sand and gravel which are carried in flood periods by the Niagara river rapidly scour and destroy steel, whereas the action of water on redwood is to form a surface of a soapy nature which protects the wood from destruction.

THE TRANSPORTATION OF SUPPLIES.

Since railroads have pushed out in every direction it was thought that the different lumber camps would be well supplied. This has not been actually the case, and there are still camps which have to get in immense quantities of provision for both man and beast, many situated a hundred or more miles from a railroad, which means a long and expensive haul. The waterways upon which the logs are floated naturally offered the best means of getting supplies to the camps.

Recently our lumbermen, especially in the West, have been turning their attention to the use of shallow-draught river steamboats, not only for the purpose of bringing in supplies, but for bringing out the logs, as well as intercommunication between camps. In some cases rafts and supplies have to be towed up stream, and thus the small steamboat has come into existence. Many of these little boats will pay for themselves in a year or two.

The elements which enter into the construction of steam craft are more numerous when the boat is to be used for general business purposes on shallow, rapid rivers than is commonly understood. The machinery, equipment and power must be proportioned not only to the hull, the load which the boat is to handle, and the runs it must make, but also to the shallow water and swift currents.

The importance of having a substantial hull, coupled with the necessity for very light draft and yet liberal carrying capacity, presents advantages in favor of certain kinds of wood, rather than of sheet iron or steel, for small and medium size steamers plying on shallow rivers, where sunken and invisible snags and rocks are a serious menace to light metal plates.

While a modern shop equipment and good location for building marine machinery is an important feature, it requires something else which is less easily purchased, viz., a thorough practical knowledge of the subject in all its details, that can only be gained through long experience not only in designing and building the engines, boilers and auxiliaries, but in operating the complete steamboat; then by noting results and correcting the faults as they may appear from time to time, the most perfect and reliable work can be and is produced, if, mixed in with those qualities, there is an earnest desire to do the best they know how. This is exactly the situation in which the Marine Iron Works, Chicago, Ill., are placed, and within their range of sizes their line is one of the most complete and modern now existing for sending out these river craft either complete or in the "knock-down" shape.

With machine-shop, boiler-shop, pipe and fitting-up shops, as well as boat yard and offices, all together and under one supervision, absolutely reliable work is produced with despatch and on as economical a basis as it is possible to formulate. Their specialty is the designing and building of the entire and complete outfits of marine machinery for boat yards and others putting up their own hulls. Within the past eleven months they have made shipments to nearly every country in the world; the growth of their bnsiness being attributable largely to the completeness as well as high character of their product and the fact that even the minute details pertaining to each outfit receive due attention, a text of theirs being that "it is the correct combination of machinery and etceteras that goes a long ways towards making the successful boat."

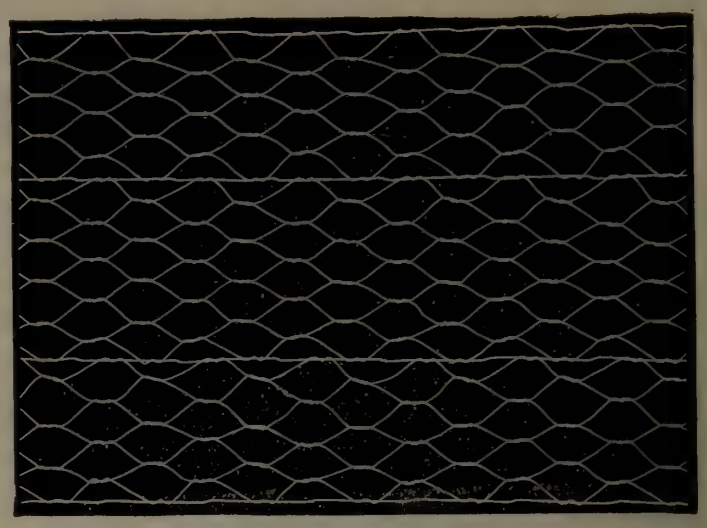
We present herewith an illustration of a stern paddle-wheel steamboat built and designed by the Marine Iron Works at Chicago, and specially adapted for lumber operations.

A FENCE FOR LUMBERMEN.

There has arisen a considerable demand for a wire fence by lumbermen, not only for fencing limits, reserves and piling grounds, but to enclose mill premises. One of the best fences especially adapted for this purpose is the New Century fence, illustrated herewith, and made by the Ontario Wire Fencing Company, Limited, of Picton, Ontario.

A glance at the illustration herewith will show many points of advantage over most wire fences. Sagging is entirely overcome by the heavy horizontal wires. The great strength of the net weave is much increased by adding the heavy middle wires. The mesh wires act in two ways, by tieing the fabric together and adding their full strength to the horizontal wires. It is claimed that no square meshed fencing has this advantage, as the tie wires of the latter give no strength lengthwise to the fabric.

A visit to the immense works of this company by our representative revealed a busy scene, with the latest improved machinery in operation. The manager states that no other wire fencing having the same weight of wire per rod equals the New Century fence in strength. A very heavy maple tree blew over on one of these fences, and, although the fence had been erected over fifteen years ago, not a strand was broken. Lumbermen should get prices from this company.



NEW CENTURY FENCE MANUFACTURED BY THE ONTARIO WIRE FENCING CO., LIMITED, PICTON, ONT.

PULP AND PAPER DIRECTORY.

Post's Paper Mill Directory for 1903 has been issued and is now for sale. It is published by Mr. L. D. Post, editor of the Paper Mill, 13-21 Park Row, New York City. It contains upwards of 600 pages and is perhaps the most complete directory of the kind ever issued. Besides a complete list of the paper, pulp and chemical fibre mills of the United States and Canada, it contains a comprehensive list of the mills in foreign countries as well as a complete list of the paper box manufacturers of the United States and Canada, claimed to be an entirely new feature. Officers of each mill, from the president to the secretary, are indexed as well as printed in another part of the book in connection with a detailed account of the mill. The price of the book is $2. There are shown to be fifty pulp mills in operation and under construction in Canada. Of this number thirty-eight mills manufacture ground wood pulp, eight sulphite fibre and four soda fibre.

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. IX. TORONTO, CANADA, MAY 6, 1903 No. 14

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING MONTREAL
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman — A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—MAN TO RUN MILL, 30 M. capacity, able to saw and do mill-wright work. Address, BOX 35, MIDWAY, B. C.

FOR SALE OR EXCHANGE — SAW-MILL 10,000 capacity; in town of 3,000 population; no opposition; a snap; particulars on application to BOX 16, CANADA LUMBERMAN.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

WANTED—FROM 25,000 FEET TO 35 000 feet dry 1 inch beech, birch or maple, common and better. Will take in carloads lots. I will take from two or three different parties as long as there is a carload. Will pay the highest cash price. Apply to BOX W, care CANADA LUMBERMAN, Toronto, Ont.

LIMITS FOR SALE CHEAP

59 SQUARE MILES ON THE BONNECHERE River for $10,000. Inspection invited at once. Also Mill and Water if desired with the limits at 4th Chute. JOHN KNIGHT, Renfrew P.O., Ont.

FOR SALE.

TWO PRESCOTT BAND MILLS, ONE RIGHT hand and one left hand, both in good condition; two second hand carriages, one right and one left hand; also the following shingle machinery: One Perkins shingle machine; one Boss shingle machine, jointers, edgers and packing boxes, one drag cut off saw, one slabber. Address HOLLAND & GRAVES, Buffalo, N.Y.

HARDWOOD LUMBER WANTED

3-inch Common and Better Soft Elm.
2-inch 1's and 2's Soft Elm.
Also all grades Ash, Basswood, Birch and Elm. Send us list of any hardwood lumber you have for sale.

BRIGGS & COOPER CO., LIMITED,
Saginaw, Mich.

FOR SALE

VENEERS—SINGLE PLY OR GLUED UP stock. INTERNATIONAL LUMBER CO., LIMITED, Sault Ste. Marie, Ontario, Canada.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

BASSWOOD WANTED — WE ARE OPEN to purchase Basswood either in lumber, logs or 52" bolts. State price F. O. B. your nearest station. THOMAS BROTHERS, LIMITED, St. Thomas, Ont.

FOR SALE,—ONE MILLION FEET OF 1½" dry maple and beech, (mostly maple). This stock is cut rough edge and runs 6 to 16 feet in length, piled mill run. We will sell it at a low figure in blocks of 100 thousand feet and up. For particulars apply BOX 318, Woodstock, Ont.

FOR SALE

60,000 B. M. WHITE AND BLUE OAK LOGS, good stock, 12 to 50 feet long, principally 34 feet. Best price on car at Lansdowne Station, G.T.Ry. Address 311 University Ave., Kingston.

LUMBER WANTED

FOR EXPORT DURING THE SEASON OF 1903, 40 to 50 carloads of 1" Soft Elm Lumber suitable for coffin boards stock. Will pay spot cash at any station in Canada. For prices and specifications address J. S. FINDLAY, Owen Sound.

WANTED—WE ARE ALWAYS OPEN TO contract for all kinds of hardwood lumber. Please state price F. O. B. your nearest station, quantity and quality of the different kinds you will have to sell during 1903. We also require a large amount of Dimension stuff, particulars of which will be furnished, on application, by the KNECHTEL FURNITURE CO., of Hanover, Ont.

LIMIT FOR SALE

A TOWNSHIP WITH GOOD RED AND White Pine. About 50,000 Logs now cut and a portion hauled Mill on the ground. Best shipping facilities. Location on C. P. R. main line. PINE LUMBER COMPANY, Cartier, Ont.

WANTED

CLEAR CEDAR LUMBER

in lengths from 12 to 18 feet long, cut plump inch, 6 inches and up in width. THE CANADIAN CANOE CO., LIMITED, BOX 107, Peterboro.

FOR SALE

Lot No. 1.	1 car 8/4 log run Birch mill culls out.
	½ car 4/4 log run Birch mill culls out.
	2 cars 8/4 log run Beech mill culls out.
	1 car 8/4 log run Maple mill culls out.
Lot No. 2.	2 cars 5/4 sound wormy Chestnut.
	½ car 5/4 1st. and 2nd. Chestnut.
	1 car 5/4 common Chestnut.
	1 car 4/4 sound wormy Chestnut.
	½ car 4/4 1st. and 2nd. Chestnut.
	2 cars 5/4 1st. and 2nd. Red Oak.
	2 cars 5/4 common Red Oak.
	1½ cars 5/4 No. 2 common Red Oak.
	1 car 4/4 1st. and 2nd. Red Oak.
	1 car 4/4 common Red Oak.
	½ car 4/4 No. 2 common Red Oak.
	2 cars 4/4 log run Maple.
	½ car 5/4 log run Maple.
	10 cars 4/4 1st. and 2nd. Poplar.
	2 cars 4/4 1st. and 2nd. Poplar 18 to 23".
	2 cars 5/4 1st. and 2nd. Poplar.
	1 car 5/4 1st. and 2nd. Poplar 18 to 23".
	2 cars 6/4 1st. and 2nd. Poplar.
	1 car 6/4 1st. and 2nd. Poplar 18 to 23".

Prices quoted on application.

CURLL & LYTLE LUMBER CO.
Pittsburg, Pa.

WANTED—200,000 FEET RED OAK, 2", 2½" and 3". Apply "Special," care CANADA LUMBERMAN.

FOR SALE—2,000,000 FEET OF DRY SPRUCE, Birch, Maple, Basswood, Elm and Butternutt sawn lumber, by A. H. CUMMINGS & SON, Coaticook, Que.

BOOKKEEPER—RELIABLE AND COMPETENT—with knowledge of lumber business; references required. Address, in writing, Box 1,024, Peterborough, Ont.

WANTED—2" HARD MAPLE, CULL OR better, 2" Black Ash and Soft Elm, log run, culls out. All dry. Address Box 37, care CANADA LUMBERMAN, Toronto.

FOR SALE — 200,000,000 FEET, FIR AND Cedar timber on Harrison Lake and Silver Creek, B. C. All easily handled. Inquire of J. J. HULL, Wahpeton, North Dakota.

FOR SALE — PLANING AND SHINGLE MILL in Dobbinton. Thirty-five h. p. boiler and twenty h.p. engine, residence in connection. Write to JOHN FRANK, Dobbinton, Ont.

WANTED.

TWIN ENGINE STEAM FEED IN GOOD order, unbroken; state diameters, cylinders, make, when can ship. Apply Box 66, care CANADA LUMBERMAN.

WANTED—A COMPETENT MAN TO TAKE charge of planing mill. Must understand machinery, dressing and matching of lumber and be able to grade same. Apply Box S, CANADA LUMBERMAN, Toronto, Ont.

FOR SALE

WE CAN SUPPLY FOR PROMPT SHIPMENT 75,000 feet Rock Elm timbers from 12 to 34 feet long, cut to order. For particulars, etc., write to KEENAN BROS., Owen Sound.

COMBINED LATH MILL AND BOLTER for sale, two of these machines, wood frames, 2-16" bolter saws, 3-12" lath saws, one has back and front power feed rolls, with extra heavy weighted top rolls, the other front power feed rolls only; thoroughly rebuilt; for sale cheap. WATEROUS, Brantford, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

An almost complete suspension of work in the building trade in Toronto, on account of labor troubles, has checked the local consumption of lumber. Where a few weeks ago dealers were being urged to accept orders, many of them now report, for the first time this spring, a slackening in the home demand. The strikes are likely to be settled at an early date, but if the employers should find it necessary to meet, even in part, the demands of labor for increased wages, it is feared that the cost of building will be so high as to discourage the carrying out of proposed undertakings. Many building projects are now in an embryo state awaiting the outcome of the negotiations under way. Throughout the province an average volume of building is in progress.

Fluctuations in lumber prices have been slight. A comparison of the May lists with those of April shows only minor changes. Common pine, 6x6 in 14 and 16-foot lengths, is held at $17 at the mill. Ten inch box and common is worth about $16, and inch box and common shorts about $13. Box manufacturers appear to be using a larger quantity of spruce lumber than formerly. The average price for spruce on the Georgian Bay is about $15, although as high as $19 is asked for lengths of 24 and 26 feet in 2 x 6 to 12-inch.

There continues to be heavy buying of hemlock lumber and dimension timber. For lengths above 18 feet $13.50 at the mill is asked.

Hardwoods are moving actively, shipments to the Eastern States being quite large. Manufacturers' prices for inch mill-run elm and basswood are around $20, and for birch $18. There is said to have been disappointment with the quantity of hardwood logs taken out during the winter, which has given a still firmer tone to the market.

Shingles and lath are steady. For XXXX pine shingles $2.75 at the mill is asked.

QUEBEC AND NEW BRUNSWICK.

Shipping of lumber from the port of Montreal has been paralyzed by the longshoremen's strike, which at time of writing has assumed a somewhat serious aspect. Vessels are completely tied up. Reports from mill points are encouraging. Manufacturers are receiving numerous inquiries for clapboards and other spruce lumber for shipment to the Eastern States. In lath and shingles the firmer tone noted last week has been retained. The demand continues to improve. Extra cedar shingles now range in price from $3.50 to $3.60, clears are worth $3, and second clears $2.40, on Boston freight rate.

BRITISH COLUMBIA AND MANITOBA.

The lumber consumption throughout the North-West this spring is exceptionally large, the demand being chiefly for building material. At some points a scarcity is reported, but it is believed that, as all the mills are now in operation, the production will shortly overtake the demand. Attracted by the rumors of a lumber combine, several American capitalists are turning their attention to the Canadian North-West, and will, it is reported, establish yards at different points. It is improbable that such action will result in reducing to any extent the price of lumber, owing to the high cost of production. Confirmation has been received of the change in the price of British Columbia shingles for delivery throughout Manitoba and the North-West. The new list which went into effect on April 1st last has been canceled, and the list of August 25th, 1902, is in effect. Owing to the shortage of cars the shingle manufacturers are considering the ques-

tion of closing down the mills for a time, but it is hoped that such action will not be found necessary.

UNITED STATES.

The lumber demand in the United States during the past week has been of average volume, although labor troubles in the Eastern States are a disturbing factor in the situation. There has been a falling off in the demand for dimension timber, and until the uncertainty prevailing in labor circles is removed bnyers will be cautious about assuming large responsibilities. Nevertheless lumber prices remain firm. At Buffalo and Tonawanda box lumber and other coarse grades have never been as scarce, resulting in an advance of from 50 cents to $1 during the past week. Some of the better grades are also scarce, due in large measure to a heavy export demand. The activity of hemlock has not subsided. In some instances an advance of 50 cents upon the list price has been made. Hemlock piece stuff is taking the place of Norway because of the difference in price. Very little Michigan hemlock is finding its way into the Eastern States, so that the Pennsylvania product has little competition. The spruce market continues firm, although random lengths are slightly easier at Boston.

There is as yet no indications of lower prices for hardwood lumber. At Michigan mills log run maple is held at $14, with very little dry stock being offered, log run basswood at $20, and ash at $16. At wholesale centres in the Eastern States log run basswood has sold as high as $30. Poplar is in excellent demand, bringing $52 in New York city. Maple flooring is firm and it is believed that concerted action on the part of manufacturers would make it comparatively easy to advance the prices to their former level.

GREAT BRITAIN.

The best that can be said of British trade is that the market is steady. Prices of lumber in stock have not strengthened as much as the position would seem to warrant, while contracts closed for new stock do not compare favorably in volume with the corresponding period of last year. The demand from South Africa is growing, but is not yet sufficient to measureably affect the market. Considering the uncertain outlook, it must be said that Canadian lumber is exceptionally firm. Pine deals are finding a ready market and some of the favorite sizes are becoming scarce. Spruce deals remain steady on the basis of £7 10s c. i. f. London and Liverpool for 60 per cent. of 7 and 8 inch. A quantity of spruce deals shipped from St. John was recently sold in Belfast at £8 per standard c. i. f. for deals and 10s per standard less for narrow widths. Battens are moving very freely, and public sales have shown a gradual advance in price.

Red pine has recently become active in the British market. It is being used more extensively for house-building purposes, and on account of its cheapness takes the place of North of Europe timber. At late public sales 3 x 10 red pine deals brought £16 15s per standard, and 3 x 9 as high as £17 5s. At the same sale first quality white pine deals of regular sizes sold at £30 5s per standard.

STOCKS AND PRICES.

The steamer Bawtry is loading deals at Halifax, N. S., for the United Kingdom.

The steamer Rathlin Head is loading deals at Hochelaga, Montreal, for the United Kingdom.

The schooner Estella loaded a cargo of railway ties at Bathurst, N. B., for Charlottetown, P. E. I.

The steamer Monarch took on 300 standards of deals at Three Rivers, Que., last week and is completing her cargo at Montreal.

William O'Neill is operating two portable mills at Sackville, five miles from Bedford, N. S., where he has over 4,000,000 feet of logs to be manufactured.

Two timber lots of 100 acres each in the parish of Lisfield, Sunbury County, N. B., owned by the Wm. E. Perley Estate, were sold last week to S. A. M. Skinner for $100.

The Rathbun Company have a drive of 75,000 pieces coming down the Burnt river. The logs will be sawn at Fenelon Falls, the firm having purchased the Ellis mill at that place.

The schooner Sephie loaded lumber at the Conger Lumber Company's docks at Parry Sound last week on account of the Edwin S. Hartwell Lumber Company, of Chicago.

J. J. Shields Bros., of Brooke, Ont., have shipped three carloads of square timber from Alvinston to England. The shipment contained nearly 2,000 cubic feet and is intended for ship-building purposes.

Spruce lath are selling in the Georgian Bay district at $2.50 for No. 1, $2 for No. 2, and $2.25 for mill run. No. 1, 32 inches in length, is worth $1.15 at the mill. No. 1 hemlock lath is held at $2.50 and No. 2 at $2.

During the week ending April 25th last, there were shipped from St. John, N. B., to the United States 1,220,000 feet of long lumber, 610,000 shingles and 50,000 lath. A cargo of 608,272 feet of long lumber cleared for Buenos Ayres and several steamers for the British ports.

Owing to the scarcity of elm and basswood, slack cooperage stock is slightly higher. At Buffalo first-class dry elm flour barrel staves are held at $9.25 to $9.50; basswood heading, 6¼ to 6½ cents; coiled hoops, $10 to $10.25 for 6 foot and $9.50 to $9.75 for 5½ foot; hickory hoops, $6.50 to $6.75.

Bank logs, by which is meant logs taken out in small lots by farmers and made up into rafts, are now arriving at Springhill, a few miles above Fredericton, N. B. They bring $11 per thousand feet for good spruce and $4.75 for hemlock. With such prices for the logs, the price of lumber cannot be otherwise but high.

John Carew, of Lindsay, Ont., has received his first consignment of logs from Scugog Lake. He has a drive containing about 1,000,000 feet on the Burnt river between Gooderham and Gelert; another containing 15,000 ties and half a million feet of logs is at Bass Lake in Harvey Township. The Squaw river drive, containing 6,000 ties and 600,000 feet of timber, is already at Ball lake and will shortly reach Lindsay. About 800,000 feet of logs and 4,000 ties are at Rosedale and will be taken to Fenelon Falls for sawing.

NEW BRUNSWICK LOG DRIVES.

The outlook for log drives on the upper St. John river and tributaries has improved during the last few days. The river rose fully four feet last week and is now higher than at any time this spring. There is still plenty of snow in the woods and another week with the river at its present driving pitch will see about all the logs on the move.

Already between 5,000,000 to 8,000,000 feet of logs have run into the booms at Douglas and Sugar Island. They came principally from the Tobique, Allegash and Grand Rivers and belong to Hilyard Bros., Estey, Cunliffe Bros., Sweeney, and Fraser & Son. None from Northwest Branch have yet put in appearance.

R. A. Estey, of Fredericton, has been advised that his Tobique drives, amounting to about 4,000,000 feet, are in safe water and his Rockway drive is coming along well. It is believed that all the Tobique drives will be out next week.

CANADIAN LUMBER SHIPMENTS.

From Vancouver, B. C.: Schooner Carrier Dove, for Shanghai, cargo lumber.

From St. John, N.B.: Steamer St. John City, for London, 258,303 ft. deals, 18,737 ft. scantling, 5,198 ft. ends, 1,656 ft. boards, 21,713 ft. birch plank, by A. Cushing & Company; 7,290 bundles shooks, by A. Gravel Lumber Company; 7,925 bundles shooks by William Thomson & Company. Steamer Pretorian, for Liverpool, 709,370 ft. spruce deals, 69,321 ft. scantling, 31,385 ft. ends, 45,924 ft. birch plank, 601 ft. ends, 174 tons birch timber, by W.M.Mackay; 32,317 ft. birch squares, by D.Fraser & Sons. Micmac, for Brow Head, 1,619,000 ft. deals and battens, 33,236 ft. scantling, 72,376 ft. ends, 179,113 ft. boards, by Alex. Gibson Railway & Mfg. Co. Str. Pocasset, for Mersey, 1,306,517 ft. deals and battens, 27,038 ft. scantling, 81,595 ft. ends, 142,355 ft. boards, 316 tons birch timber, by Alex. Gibson Railway & Mfg. Co.

DOORS AND MOULDINGS.

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in first instance to "Empire," CANADA LUMBERMAN.

An Adirondack spruce firm has just closed a contract with the General Electric Company, of Schenectady, to supply them with about 9,000,000 feet of spruce, to be shipped to them during the year, and to be used for boxes.

In an interview given recently Mr. J. A. Humbird, of St. Paul, who is interested in the Victoria Lumber Company of Chemainus, B. C., said: "There is a large amount of lumber being sold at the present time. The worst feature about the lumber and shingle business on the coast is the car shortage. The trouble is that the westbound shipments are not great enough to keep the number of cars required here. You can't expect railroad companies to haul empty cars to the coast for the purpose of hauling lumber eastward."

THE BOSTON MARKET.

There continues to be a good demand in Boston for spruce lumber. In fact, it may be said that the demand is excellent when the possibility of widespread labor troubles is considered. A fair supply is coming forward, especially from the Provinces, though there is still complaint that the railroads cannot move freight as quickly as is desired. The quotations are firm: Ten and 12-inch dimensions, $21; nine inch and under, $19; 10 and 12-inch random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50; 5-inch and up, merchantable boards, $17; matched boards, $18.50 to $20; out spruce boards, $13 to $14; bundle furring, $17.

Hemlock boards are firm, but prices are generally unchanged: Boards, 12, 14 and 16 feet stock, $15 for good eastern; Pennsylvania, No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Western pine holds very firm, with a good demand and only a moderate supply: Uppers, 1 to 2 in. $84 to $87; 2½ to 3 in. $92 to $97; 4-in. $96 to $100; selects, 1 in. $76; 1¼ to 1¾ in. $76 to $78; 2 in. $78; 2½ to 3 in. $84; 4 in. $86; fine common, 1-in. $67; 1¼ to 1½ in. $69; 2-in. $72; 2½ to 3 in. $80; 4-in. $82; barn boards, $23 to $33; coffin boards, $28 to $32.

Hardwood lumber is in excellent demand with the market very firm both here and in the South. There is still complaint as to the scarcity of whitewood and quartered oak, and prices may go higher. The quotations are: Quartered oak, $75 to $83; plain oak, $45 to $47; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $54 to $60; sap, $43 to $48; common, $38 to $45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end-dried white maple, $46; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Spruce clapboards are still very scarce, and prices are firm and unchanged: Extra, $45; clear, $43; second clear, $40; extra No. 1, $30 to $33.

There is a good demand for shingles and prices are firmly held: Extra cedar, $3.50 to $3.60; clear, $3.00 to $3.10; second clear, $2.40 to $2.50; extra No. 1, $1.75 to $1.80; British Columbia red cedar, 16-in., five butts to 2 inches, $3.50 to $3.60; 18-inch, five butts to 2 inches, $4.25; five butts to 2¼ inches, $4.50.

Laths are firmer, but prices are not yet quotably higher: One and five-eighths inch, $3.25 to 3.45; 1½ inch, $3.10 to $3.25.

GILMOUR & COMPANY, LIMITED
TRENTON, CANADA

SHIPPING MATTERS.

A dispatch from Seattle, Wash., dated April 22nd, says :—"Secretary Victor H. Beckman, of the Shingle Association, has received a letter from the Treasury Department asking for information regarding an order recently issued by the Great Northern and the Northern Pacific Railways and three days ago supplemented by an order from the Wisconsin Central, refusing to furnish any more cars for shingle shipments east of Chicago. The contention of the lines is that they now have upwards of 14,000 cars on foreign lines in the east, which they are unable to get back. The effect of this order will be to kill the Washington shingle market in the eastern states, amounting to about 5,000 cars annually, and in the face of present conditions, including the largest surplus stock on record in the hands of the coast mills and little demand in the central west, the situation is alarming to the trade."

WANTED

MESSRS JOSEPH OWEN & SONS, Ltd., of Liverpool, Eng., are open to treat for regular supplies of large quantities of HARDWOOD LUMBER, and will be glad to hear from holders who have to offer WHITE ASH, WHITE OAK, SCALY BARK and SECOND GROWTH HICKORY, POPLAR and WALNUT, in logs, planks and boards, also prime fresh BIRCH LOGS of large dimensions.

LUCAS, STEELE & BRISTOL,

HAMILTON, ONT.

TRADE NOTES.

Lequime & Company, of Smelter Lake, B. C., are being supplied with saw mill machinery by the Waterous Company, of Brantford.

The Hanchett Swage Works, Big Rapids, Mich., manufacturers of the Hanchett swage, have been running nights for over two months in order to keep up with their orders.

A neat catalogue issued by the Robb Engineering Company, of Amherst, N. S., describes and illustrates the Robb-Armstrong engine and shows views of some of the power plants installed by that company.

The E. C. Atkins Saw Co. have removed their Canadian office and showroom to No. 30 Front Street East, Toronto, where Mr. H. P. Hubbard, the Canadian manager, will be pleased to receive a call from readers of THE LUMBERMAN.

The new band saw and engine recently installed by the Bryan Manufacturing Company, of Collingwood, Ont., was supplied by the Waterous Company, of Brantford. This firm also furnished the complete equipment for the saw mill which Senator McLaren is building in Alberta.

The Waterous Company, of Brantford, Ont., are supplying the complete saw mill and planing mill machinery equipment for the new mill of the Crow's Nest Pass Lumber Company at Wardner, B. C. They are also supplying considerable machinery for Urquhart Bros'. mill at Vancouver.

The Sovereign Oil Company have opened offices at 28 and 30 Wellington street west, Toronto, Mr. A. W. Brodie, manager. This company are doing an immense business in lubricating oils, paraffines, boiler compound, etc., and we wish to draw the attention of consumers to the company's advertisement in this issue.

The Fernie Manufacturing Company, of Fernie, B.C., have recently placed an order with J. L. Neilson & Company, of Winnipeg, for a full equipment of wood-working machinery for the large sash and door factory which they are about to erect at Fernie. The factory when completed will be one of the largest in Canada.

A new company with enlarged capital has taken over the business of James W. Woods, manufacturer of lumbermen's supplies, Ottawa. The company will be known as "Woods, Limited", and is composed of James W. Woods and James Mather, of Ottawa, and John Carroll, Shirley Ogilvie and W. J. White, K. C., of Montreal.

The American Blower Co. is furnishing dry kilns for the Lansing (Mich.) Spoke Co., Severance Tank Works, Lansing, Mich., The Doane & Jones Lumber Co., Eldridge Park, N. Y., The Hazleton (Pa.) Mfg. Co., and the Garetson-Greason Lumber Co., Fish, Mo. They are also very busy in all the other departments of their business.

Now that the Supreme Court of Maine has issued writs of injunction against a large number of companies and individuals engaged in the manufacture of lumber, forbidding them to discharge refuse into the Kennebec river and its branches, it is suggested that these parties utilize this refuse, which they have heretofore wasted, to run their mills, by putting in the Gordon hollow blast grate, manufactured only by the Gordon Hollow Blast Grate Company, of Greenville, Michigan.

The M. Garland Company, of Bay City, Mich., last month shipped a carload of stave and heading machinery to the Otter Creek Lumber Company, Otter Creek, Florida, consisting of a combination bolter and sawing machine, arranged with variable friction feed, and gang bolter for converting slabs and trimmings into staves and heading, a two saw stave equalizer for sawing staves to length, and a patent rotary head stave jointer. These three machines make a complete equipment for a first-class stave mill.

The Lumberman's Diet

Clark's Corned Beef and Clark's Pork and Beans are the best produced in Canada and equal to the finest imported. Get quotations from your jobber.

WATEROUS BRANTFORD, CANADA.

WE MAKE A SPECIALTY OF

SMALL STEAM POWERS

For every kind of service—MILL, AGRICULTURAL and MARINE.

These engines are reliable and easily managed. Remarkably small and compact for the power developed. Light and portable. They will reverse instantly at any point. High-speed, noiseless, and non-vibrative. And they are above all economical engines.

We also devote ourselves to Small Steam Yacht Installations, using Fuel-Oil and Quick-Steaming Boilers, as well as to Direct Connected Lighting Units.

The **SLEEPER ENGINE COMPANY, Limited** Montreal.

'Phone, East 2403. Office and Works, Cor. Darling and Notre Dame Streets

A WISCONSIN TRIP.

(By Our Travelling Representative.)

Crossing Lake Michigan I landed at Manitowac, a lumber shipping point. Considerable lumber is brought from the interior of Wisconsin by rail, the same cars being run onto the large lake ferry boats and landed at Ludington, from which point the cars are sent through without transhipment to Toledo, Ohio, and other points.

Two Rivers is still quite a lumber shipping point, and a regular fleet of lake schooners and barges have done a great deal of business in the carrying trade from this section.

Up at Green Bay I saw the effects of a decaying industry. This was formerly a great center of lumbering operations, but nothing of magnitude is to be looked for nowadays. It is said that the Diamond Match Company got out over forty million feet of timber from the Ontonagon river this last winter. The logs were loaded on cars and hauled to Green Bay, where they are being sawed. This company stationed engines along its logging roads and a cable is used to assist the horses up the inclines with the big loads.

A new logging railroad is to be built across Marinette county. It is to be constructed by the Bird & Wells Lumber Company, who own considerable timber in that region. The road will be from 15 to 30 miles long, opening up a quantity of standing timber and making it tributary to Wausaukee and Marinette. The line will run from Athelstane to the Forest County line.

Logging operations at Girard Junction are to be continued through the summer. This will finish up the pine and cedar in that locality. At one of the mills in Green Bay steam was raised as early as February 27th in order to thaw out the ice in the log pond, to secure a place in which to float the logs. The ice was melted by steam passed through a small pipe which is let down just under the surface of the water and the heat melts the ice rapidly. In the past the pipe was laid under the ice.

At the logging camps at Armstrong Creek, over ten million feet of logs were in the water before March 1st. The latter part of February the sun was so strong as to spoil some of the roads, but next season a logging road will be built to get out the timber.

The Diamond Match Company received over forty cars of logs per day in February and started up their plant on March 9th.

At Marinette I found the lumbermen anxiously awaiting the result of the season's cut. The N. Ludington Company are very prominent dealers and do a large trade. I learned that portable sawmills were going through the cut-over lands of Wisconsin cutting down everything and anything marketable.

Watson Bros., of Marinette, are preparing to go largely into the manufactnre of lumber camp stoves. They have one of the best in existence and should find a great demand for it.

At Appleton I found the Miller Lumber Company and the Geo. Jones Lumber Company doing the principal business in this section. Both at this point and at Kaukauna the pulp and paper-mill men told me that never before had there been such a shortage of pulpwood since they commenced the munufacture of paper from wood. They asked me if they could get a supply of pulpwood from Ontario, and I answered that we should be pleased to do more—we would send them the pulp, but not the wood.

The Pulpwood Supply Company, which was under contract to furnish the mills of the Fox River Valley with 175,000 cords of pulpwood, had difficulty in getting the usual amount this year.

Oshkosh has always been noted as a great sash, door and blind center. The general opinion was that the end of the white pine was near, and white pine meant life or death to the sash and door trade. This opinion was not generally shared by all, as some seemed to think the white pine could be easily replaced by yellow pine, hemlock, etc. The larger concerns felt that as long as there was white pine in the north they must have it or run a losing trade with the northern concerns. At Oshkosh they are now turning out a pine veneered door which would be counted a novelty in some parts of Canada. Even to my own mind the very word "veneer" seems to mean a valuable wood. Pine is valuable in Oshkosh—$65 being a very low price per thousand for the best stock. The door factories now take the cheaper grades, pine culls and hemlock, and veneer it with clear pine, making a No. 1 door, having special machinery for doing this work. Speaking to a leading manufacturer about this, he said laughingly: "Yes, we are using a pine veneer to-day—to-morrow we will stuff them with sawdust!" Another Oshkosh lumberman said to me: "Send over your Canadian travellers to sell us lumber." The same conditions exist in the whole of Wisconsin as in Northern Michigan. Five years or less will see the end of the white pine industry, and Minnesota is rapidly going the same way.

While in the northern part of the state I went right into a lumber section where grippe was raging. As a result I took away a severe attack of grippe as a souvenir. The camps on account of the epidemic were short-handed.

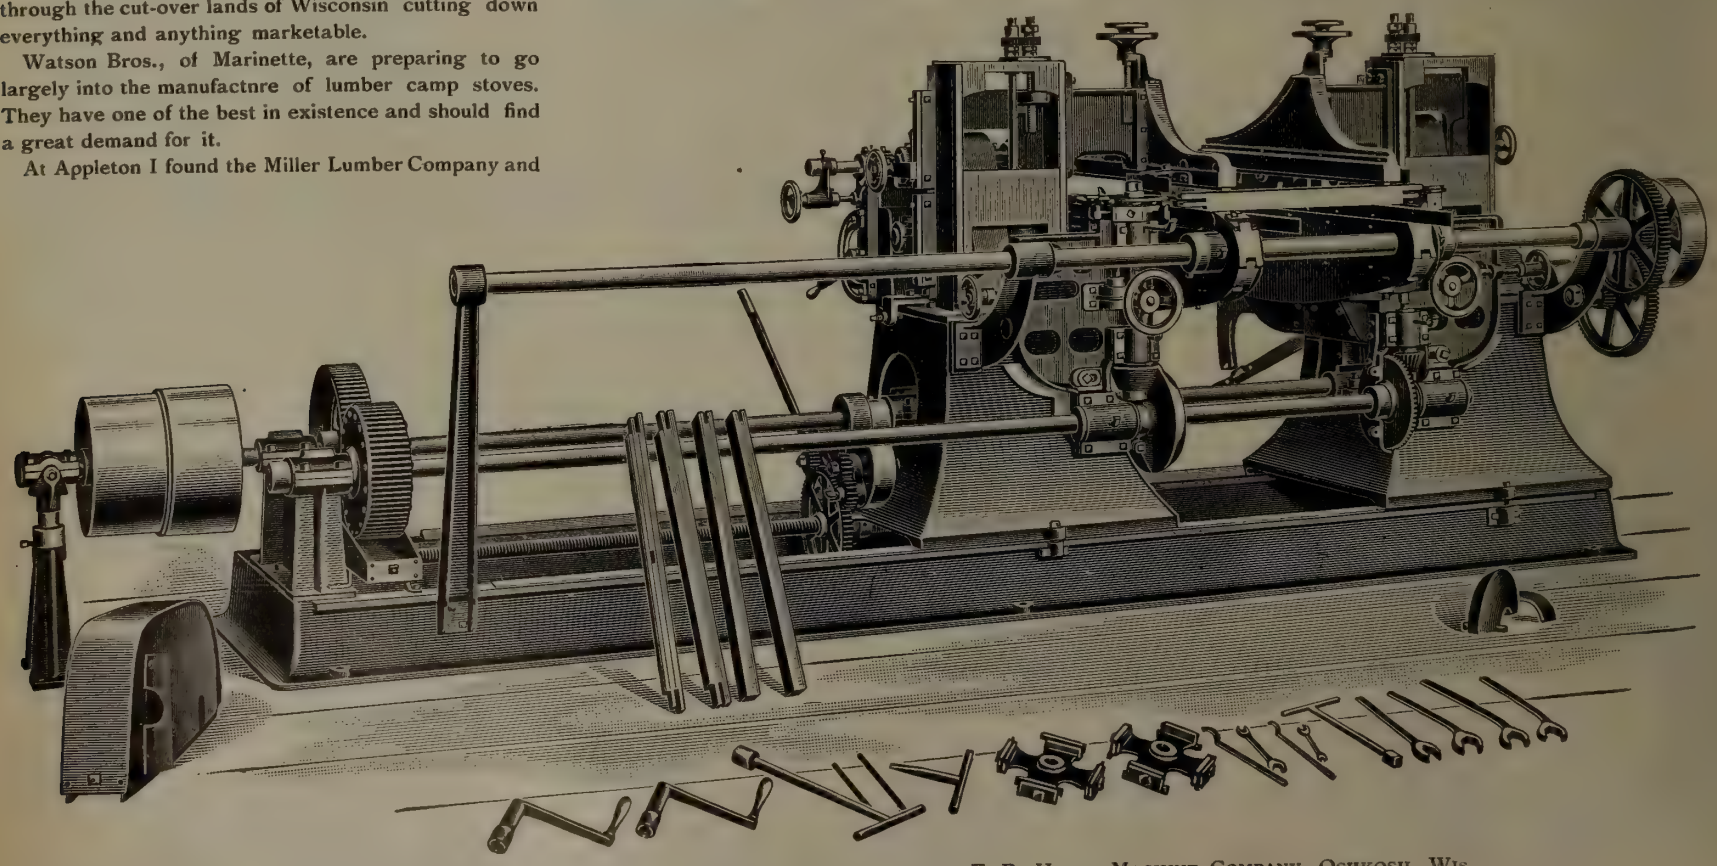
At Oshkosh is situated the E. B. Hayes Machinery Company, manufacturers of wood-working machinery. Dowel, door, sash, blind and furniture machinery is their specialty. They pay special attention to the export trade. This company is now pushing out for the world's trade.

The E. B. Hayes Company manufacture machinery for all sizes of plants, including double end tenoning machines of several styles. They also make power door clamps, double door stickers and sash machinery. The machine we illustrate is called a Standard New Geared Double End Tenoner. The new feature of this machine is in the "cope arbors," which are driven by means of gears in place of belts. The old style of machine required six belts on this part of the machine, of which this company claim to be the originators. All mechanics in the wood-working line will see that this new way of applying power to the "cope arbors" on the machine is a new feature and a great step in advance along the line of improvements.

Among those I had the pleasure of seeing in Oshkosh were the following: R. McMillen Company, Williamson & Libbey, The Morgan Company, G. Streich & Company, A. Streich & Bro., Gould Mfg. Company, and W. J. Campbell. These concerns number among them the largest in the city. Mr. Dis. W. Denham gave me considerable information respecting the city's progress.

The Star Foundry & Machine Works, of which Mr. J. A. Barnes is the proprietor, manufacture the Climax double tenoner, which class of machine has become in the last few years a necessity because of the large amount of work that can be accomplished with accuracy, as well as other labor-saving qualities.

SINGLE EXHAUSTER MANUFACTURED BY WM. BAYLEY & SONS CO., MILWAUKEE, WIS.

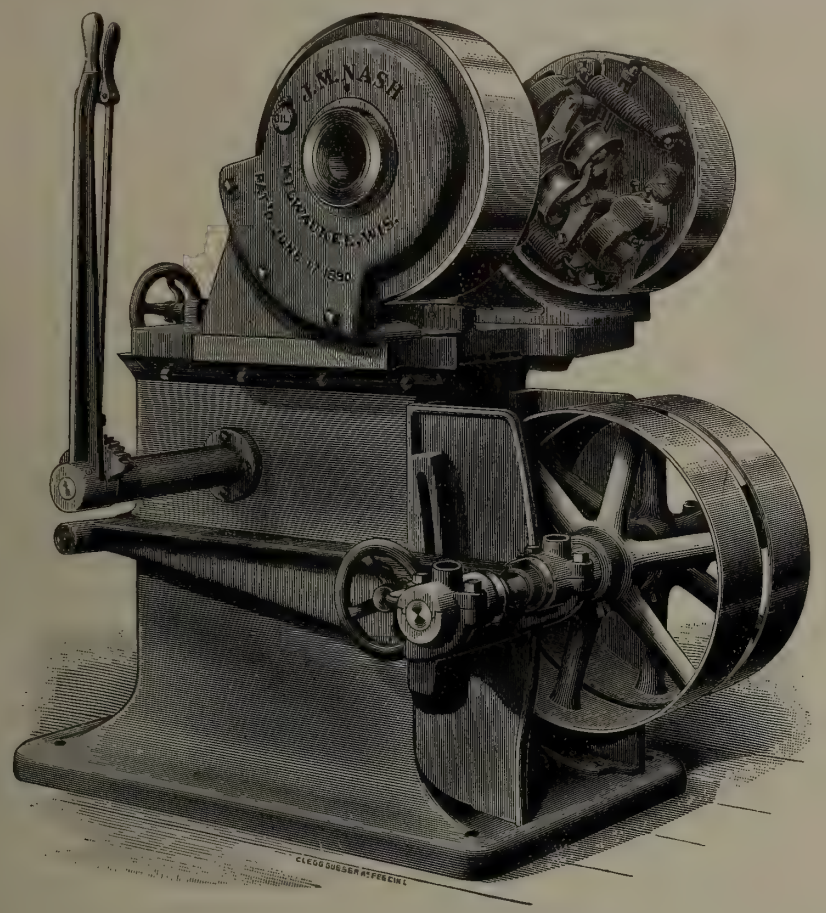


STANDARD NEW GEARED DOUBLE END TENONER MANUFACTURED BY E. B. HAYES MACHINE COMPANY, OSHKOSH, WIS.

In this city there are some wood-working industries, such as the manufacture of heavy lumber wagons, sleighs, logging trucks, etc., for which there is a constantly increasing demand in Canada.

At Fond du Lac there are several industries of considerable magnitude, including the O. C. Steenberg Company, manufacturers of sash, doors and blinds; Giddings & Lewis, saw mill machinery; and B. F. & H. A. Sweet, who make mill carts, lumber wagons, etc., on an extensive scale.

Milwaukee has always been and still is a great lumber center. One of the largest concerns, the Quinnesec Lumber Company, whose advertisement will be seen in another column, are pushing out into Canada. Several more companies would like to get in Canadian lumber direct but are not exactly sure how to do it. They have only to consult our columns to see how others are successfully doing it—by the insertion of a card in the CANADA LUMBERMAN.



AUTOMATIC SANDER MACHINE MANUFACTURED BY J. M. NASH-SANDER CO., MILWAUKEE, WIS.

The middle west has a brilliant future and Milwaukee is pushing along phenomenally in manufacturing. It now takes rank as the second machinery center in the west. It has lately secured a new coke manufacturing plant which will cost $400,000 and which will put the Chicago and Milwaukee manufacturing district ultimately more on a parity with Pittsburg. This industry will lead to new experimentation, development and mastery of the problem of the west manufacturing its own coke. Mark Hanna is interested in this plant.

Owing to the fact that 75 per cent. of all the iron ore used in the United States comes from the region north of Milwaukee, the Lake Superior district, it was said, decided to make the coke nearer the ore. All the motive machinery recently installed on the New York elevated roads was made in Milwaukee.

There are several firms making saw mill machinery and manufactures of interest to the lumber trade.

Prominent among these is the well-known firm of Wm. Bayley & Sons Company, whose extensive plant on Greenbush street is one of the city's busy hives. They also make the Progressive lumber kilns for drying all kinds of lumber, staves, heading, etc., as well as steel plate blowers and exhausters for removing dust and shavings from wood-working establishments.

Another large plant is that of the Nash Sander Company on Lake and Ferry streets. We have pleasure in showing an illustration in this issue of the automatic Nash sander. This machine is designed for and especially adapted to sanding or polishing all kinds of round work, such as chair stock, dowel rods, curtain poles, shade rollers, hoe, fork, rake, shovel and broom handles; also for polishing metal rods, gas pipe and tubing. The machine is thoroughly well built, very strong and substantial in every respect. All of the boxes, bearings and oil holes are so constructed and arranged as to perfectly exclude all sand or dust, thus insuring great durability for the machine. This machine will sand all sizes of stock from ¼ inch to 2¼ inches diameter and any length. These sanders will sand stock at a speed of from forty to sixty running feet per minute. Two sand belts are used and are so arranged that the one with fine sand follows the one with coarse sand, thus producing finely finished work once through the machine, though the work may have been very roughly turned. The sand belts can be put on or removed very quickly without removing or disconnecting any part of the machine. The pulleys that carry these belts are on the ends of the shafts overhanging the boxes.

These machines turn out in ten hours 15000 chair legs, 10,000 broom handles, 8,000 shovel handles or 2000 16-foot curtain poles.

Of special interest to planing mills and flooring manufacturers are the machines of the W. S. Sherman Company. They make an improved matcher and a face boring machine for boring jointed flooring, which are well and favorably known to all the leading flooring manufacturers. It makes jointed or factory flooring marketable without increasing the cost of labor. Jointed flooring is claimed to be the best for factory floors when it is bored, because nail heads may be set below the surface. Besides being an "order fetcher" the lower grades of flooring stock can be turned into jointed or factory flooring and made marketable by face boring. These machines are a necessity for the close competitor in the business.

Besides the Quinnesec Log & Lumber Company, the Curtis & Yale Company, M. Hilty Lumber Company, and Page & Landeck are leading firms. Hardwood flooring is a specialty with them. The Curtis & Yale Company are large manufacturers of sash, doors and blinds. The M. Hilty Company do quite a trade in lath, shingles and posts as well as all kinds of lumber.

In Madison I met the Frederickson Brothers, A. D. and J. V., both of whom gave me a hearty welcome to their large establishment. Besides being extensive pine, hemlock and hardwood manufacturers and dealers they are builders and contractors. The Miller-Parkinson Company are also doing a business of considerable magnitude.

A lumberman informed me that there was not as much pine standing in Wisconsin as was generally believed. He subtantiated my knowledge that a large number of portable saw-mills were now going through the cut-over lands cutting down everything and anything.

A short run brought me to Beeton, near the Illinois border. Mr. L. O. Stordock is the principal lumber dealer here. I visited the R. J. Dowd works and found them rushed with business. They will in the near future do a large trade in Canada. The Berlin Machine Works is one of the largest wood-working machiney plants I have ever visited, employing nearly one thousand hands. Their trade and fame is rapidly extending to all parts of the world, whilst their Canadian trade is assuming great proportions.

After having gone through Wisconsin from north to south and zig-zagged across the state from east to west, I was astonished to find such a very small lot of pine, either standing timber or lumber. Most of the dealers are substituting "any old thing" for pine wherever possible.

In 1900 the lumber product of Wisconsin was valued at $54,634,816, which was the largest of all the states. 1901 and 1902 saw great cuts made and that is the answer to any question of where the lumber went. The state is still the chief contributor to the country's supply of white pine.

According to information I gleaned at the state capital the amount invested in the lumber industries was as follows:

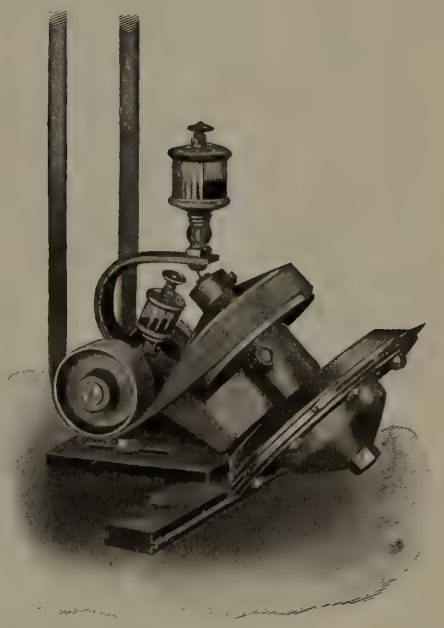
Logging plants	$36,120,090
Saw-mill plants	8,640,420
Planing mills	1,527,602
Live capital	29,777,881
Timber camps	1,300,230
Total capital invested	$77,366,223

The following was the value of the products:

Saw mills	$39,944,711
Planing mills	15,449,096
Timber camps	2,241,009
	$57,634,816

The number of persons engaged in the lumber industry in Wisconsin last year as proprietors, officials and wage earners was 33,107. The amount paid for wages in 1900 was nearly thirteen millions of dollars. This showed a decrease last year.

The officials reckon that there are ten thousand millions of feet (board measure) of timber in Wisconsin consisting of hemlock, spruce, poplar, white oak, the balance of the pine and other hardwoods. There is a large amount of hemlock in the state. 1890 was the high water mark, the value of the lumber in that year being nearly $61,000,000. In 1900 it was three millions of dollars less and it is said this year will show at least a decrease of seven or eight millions despite the much higher market prices.



MATCHER AND FACE BOLTER MANUFACTURED BY W. S. SHERMAN CO., MILWAUKEE, WIS.

To show how rapidly the great pine forest has been slashed down, Wisconsin did not become prominent in lumbering until 1870. In 1880 it occupied third place in the industry, in 1892 it rose to second place, and in 1900 to first place.

Apparently no attempt whatever has been made in the line of natural reproduction, and as a consequence the pine of Wisconsin is nearly all gone—never to return.

J. R. H.

ANNUAL MEETING OF THE WESTERN RETAIL LUNBERMEN'S ASSOCIATION.

The annual meeting of the Western Retail Lumbermen's Association was held in Winnipeg on Tuesday, March 31. The attendance of members was unusually large. The principal items of business taken up were the reports of officers, a revision of the constitution and by-laws, and elections.

The members in attendance at the meeting were as follows: Jas. McDole, Cypress River, Man.; F. H. Dagg, Holland, Man.; J. McCutcheon, Glenboro, Man.; A. Renuart, St. Pierre, Man.; A. R. Stevens, Elm Creek, Man.; David Ross, Whitemouth, Man.; A. L. Brown, Saskatoon, Saskatchewan; S. Ashfield, Winnipeg; Henry Stewart, Oak Lake, Man.; A. D. Sinclair, Winnipeg; A. B. McClelland, Winnipeg; Geo. Rogers, Lethbridge, Alberta; W. W. Ireland, Carberry, Man.; John Wake, Minnedosa, Man.; A. Lemay, St. Boniface, Man.; J. H. Hughes, Brandon, Man.; S. Q. O'Brien, Ponoka, Alberta; H. W. Hilliard, Minnedosa, Man.; Edwin Bray, Wolseley, Assa.; W. F. Ramsay, Killarney, Man.; H. H. Ross, Whitemouth, Man.; Jas. M. Hall, Vancouver, B.C.: F. H. Ringwood, Lenore, Man.; R. Law, Douglas, Man.; Peter Schwanz, Altona, Man.; D. J. McDonald, Port Arthur, Ont.; Wm. Scott, Port Arthur, Ont.; H. M. Klassen, Altona, Man.; S. Milliard, Carroll, Man.; Jas. K. Robson, Treherne, Man.; J. L. Campbell, Melita, Man.; W. H. Duncan, Regina, Assa.; D. E. Fraser, Kenton, Man.; I. E. Gaudin, Napinka, Man.; I. D. Kennedy, Brandon, Man.; Robt. W. Gibson, Wolseley, Assa.; D. H. McDonald, Fort Qu'Appelle, Assa.; T. R. Case, Winnipeg; James A. Ovas, Winnipeg; A. H. Bailey, Winnipeg; G. B. Housser, Portage la Prairie; Wm. Robertson, Rat Portage, Ont.; W. A. Morkhill, Dominion City, Man.; A. A. Ballard, Morris, Man.; S. Caswell, Rathwell, Man.; H. Byrnes, Winnipeg; T. L. Arnett, Souris, Man.; W. T. Storey, Wawanesa, Man.; A. W. Sherwood, Indian Head, Assa.; Alex. Black, Winnipeg; J. C. Graham, Winnipeg; J. Hanbury, Brandon, Man.; G. Silvester, Elkhorn, Man.; Alf. Hill, Underhill, Man.; W. H. Harrison, Neepewa, Man.; Geo. Aulsebrook, Winnipeg; A. Brown, Winnipeg; W. Cowan, Prince Albert, Sask.; Mr. Robinson, Cranbrook, B. C.; Wm. Ansley, Rouleau, Assa.; J. A. Badgeley, Emerson, Man.; D. E. Sprague, Winnipeg; J. E. Parrot, Saltscoats, Assa.

PRESIDENT'S ADDRESS.

President J. L. Campbell called the meeting to order and after a few words of welcome to the members proceeded to deliver his annual address, which was as follows:

To Members of the Western Retail Lumbermen's Association:

Gentlemen,—It is proper that I should explain to you why you are called together at this time instead of in February, as has been the custom heretofore. It has been found that for some years past during bonspiel week there were so many counter attractions that the many important affairs of the association were almost neglected. Many subjects were passed over entirely, and those brought up were only partially discussed, and no satisfactory conclusion arrived at. In fact the usefulness of the association was stifled, and so little of benefit was accomplished that we might almost as well have had no annual meetings. In view of this, your directors have thought it wise to hold this annual meeting at a time when those in attendance could give their undivided attention to the matters presented. You will be asked to give advice as to the continuance of this practice.

Owing to the rapid strides of your association and its extended sphere of usefulness, your directors have considered that the by-laws formulated ten years ago were unsuited to later conditions. As a matter of fact, the workings of the association in practice have been getting far away from the lines laid down in these by-laws. For some time past, the feeling has been growing with your directors that the by-laws should be so modified as to make them more compatible with the actual workings of the association. The by-laws, as amended, will be presented for your consideration and adoption, with the hope that they may be found to express more clearly the objects of the association, and the spirit of the intention.

Like other kindred organizations, it has been thought an opportune time to introduce a scheme of fire insurance applicable only to members engaged in the retail lumber business. Your secretary has obtained valuable information on the subject, through the courtesy of Mr. Hollis, secretary of the Northwestern Lumbermen's Association, which gives us useful data, and much encouragement in presenting for your consideration a plan of fire insurance for our members. When this scheme is laid before you in detail, I am sure it will receive your thoughtful attention.

In order to enlarge the usefulness of our association and to give added interest to its members, it is proposed to establish an information bureau, for the purpose of collecting and disseminating items of general and useful information, for the benefit of our members. This will be done by bulletins sent out at regular intervals. I trust each member will consider it incumbent upon himself to forward to the proper officer any interesting items touching upon the lumber business, or the affairs of the association. In short it is hoped that all will lend their co-operation to make this feature of our association attractive and useful.

It is with the greatest pleasure I testify to the indefatigable and efficient services of the secretary, to whose zeal, more than that of any other person, is due the great success attained by our association in the past.

In conclusion, I wish particularly to draw attention to the great kindness I have experienced at the hands of the individual members in general, making special mention of those of your board of directors. With them the labor incident to the conduct of your affairs has been made a pleasure rather than a task.

The Secretary, Mr. Isaac Cockburn, then presented his annual report. The receipts for the year and cash on hand at time of last report were shown to be $8,713.28, and the disbursements $3,045.04, leaving a cash balance of $5,668.24. The report concluded as follows:

Our membership with yards on the 31st December, 1902, was 343, as against 244 the year previous, being an increase of 99 active members, and that of our honorary members was 63 as against 37 in the year 1901, being an increase of 26 in number.

When I state yard membership, I wish to distinguish that from membership which I have not included, and for which applications have been granted along the several lines of railway under construction, or about to be, and which will be listed as fast as the roads are opened, so that stocks may be put in.

In the matter of grievances it has been my purpose to bring about reconciliation of differences arising therefrom, and I am strongly of the opinion this is much the better course, than that of harshness. Harmony and friendship prevailing between all members is conducive to bringing about improved conditions of the association, and we are required to always bear in mind that you are simply an association of dealers to promote the betterment of the trade by uplifting each other, and not the thought of the possibility of the dollars that are in it for you, individually. Consequently, it behoves you to give the utmost consideration to each other and inculcate a kindly and friendly feeling in coming in contact one with another, and exercising well defined business ethics.

You will observe that our association has has been extending until it has become worthy of the term often applied to this western country, that is, one of magnificent distances, bounded as it is on the east by Ontario, on the west by British Columbia, on the north by Prince Albert in the Saskatchewan district and Edmonton, and northeast in the Alberta district, and on the south by the confines of Montana and Dakota. I might say that while the district of Alberta is great, we are successfully operating it through an advisory board in that locality, and have received quite an impetus there, both north and south, since its organization.

As you know, we are confronted with a very general cry that we are an iniquitous combine, bringing about extortionate prices and unduly restraining the trade. This, of course, is not true, and it is passing strange that all this agitation has just now arisen after an existence of 12 years of the association. To my mind, the retail trade in lumber under this association has been conducted with remarkable fairness to the consumers. The prices over the wholesale cost have been moderate as compared with other mercantile lines of business.

ELECTION OF OFFICERS.

The election of officers resulted as follows: President, J. L. Campbell, of Melita, Man., re-elected by acclamation; Vice-president, A. M. Stewart, Morden, Man.; Secretary-Treasurer, Isaac Cockburn, Winnipeg; Directors—D. E. Sprague, Winnipeg; G. E. Davidson, Manitou, Man.; J. K. Robson, Treherne, Man.; W. H. Duncan, Regina, Assa.; W. W. Ireland, Carberry, Man.; J. E. Parrot, Saltcoats, Assa.

A large saw mill in Port Blakeley, Washington, owned by Capt. William Renton and his nephews, John and James Campbell, natives of Pictou, Nova Scotia, has just been sold for $3,000,000.

THE NEWS

—J. Conklin is building a planing mill at Kingsville, Ont.

—C. W. Milestone has opened a lumber yard at Moose Jaw, N. W. T.

—The Gilmour Company are making improvements to their woodworking factory at Trenton, Ont.

—The Joanisse planing mill at Buckingham, Que., has passed into the hands of the Parker Company.

—The Sherlock-Manning Company, of London, Ont., purpose building a new kiln for drying lumber for their organ factory.

—A boiler in Angus McKinnon's saw mill at Coleman, P. E. I., exploded recently, killing one man and injuring two others.

—J. D. NcArthur has assumed the active management of his lumber business at Winnipeg, Mr. J. M. Chisholm having resigned.

—Joseph Chew, late of Midland, Ont., is installing the machinery in his new shingle mill on False Creek at Vancouver, B. C.

—The Tobique Manufacturing Company have installed a new rotary gang and a resaw in their large mill at Plaster Rock, N. B.

—The Prairie Lumber Company, of Winnipeg, are opening a lumber yard at High Bluff, Man., with Harry Brown as manager.

—W. C. Archibald, of Wolfville, N. S., purposes planting 12,000 trees at Earncliffe, the farm purchased by him last year at Greenwich.

—The Chilliwack Shingle Manufacturing Company are refitting their shingle mill at Chilliwack, B.C., and expect to resume operations at an early date.

—It is understood that John Hanbury, of Brandon, Man., intends building a large mill in British Columbia, where he recently purchased extensive timber limits.

—The Taplin-Anderson Company, Limited, has been incorporated at Novar, Ont., with a capital stock of $75,000. It is proposed to operate two saw mills in the vicinity of Novar.

—The Georgian Bay Shook Mills, Midland, Ont., have considerably enlarged their plant by the erection of a new dry kiln and installation of planers and other improved machinery.

—The Canada Wood & Coal Company, Limited, is a new corporation at Winnipeg. The powers of the charter include the handling of timber limits and operation of saw mills. The capital is $20,000.

—The Michigan Land & Lumber Company are reported to have sold their large saw mill at Blind River, Ont., to McEwen & Dolson, of Bay City, Mich., who will probably make improvements to the mill.

—B. J. Gilligan will build a saw mill at Mattawa, Ont., provided he is given a bonus. T. J. Harwood is willing to build a shingle mill at that place if his annual assessment is fixed at $500 for a period of ten years.

—W. F. Hunting, of Chicago, is reported to have purchased a site at Vancouver, B. C., on which to erect a large saw mill. Cruisers are now surveying timber lands which Mr. Hunting has in view for purchase.

—The Alberta Lumber Company has been organized at Vancouver, B. C. It is proposed to build a saw mill and shingle mill on False Creek. Dr. W. D. McKechnie s president of the company, and C. W. Ford vice-president.

—Thackray & Rawlins, who have been in the sash and door business at Pembroke, Ont., have dissolved partnership. George Rawlins will continue the business, while James Thackray will engage exclusively in the saw-mill business.

—The Soo Manufacturing Company are building a planing mill at Sault Ste. Marie, Ont. The ground floor will be used this season for matching and dressing lumber, but in the fall it is proposed to fit it up for a sash and door factory.

—J. B. Memramcook, C. B. McManus, of Newcastle, and others are seeking incorporation as the J. B. McManus Company, Limited, to carry on a general lumbering, mercantile, contracting and manufacturing business in the province of New Brunswick.

—Robert McNair has made application for water rights on the Coquitlam river. They are required for construction of a flume, Mr. McNair having purchased a large timber limit on Coquitlam lake and being about to erect a shingle mill at Westminster Junction.

—The Alex Black Lumber Company, Limited, has been formed in Winnipeg, to continue the retail lumber business heretofore carried on by Alex. Black. The company have taken over the retail business of the Rat Portage Lumber Company and will combine the two yards.

—Several British Columbia gentlemen have formed a syndicate to purchase a hardwood timber tract in Australia covering 50 square miles, for the purpose of manufacturing hardwood lumber and shipping it to America. J. W. Smith, of Australia, is the promoter of the enterprice.

—The British Columbia Mills, Timber & Trading Company, of Vancouver, B. C., are said to have been given an order for forty "knock-down" houses for the Northwest Territories. The houses are of eight different designs. This is believed to be an experiment so far as Western Canada is concerned.

—A despatch from Vancouver, B. C., says: V. Gaspard, representing Chicago lumber interests, has been in the city negotiating for the purchase of over one hundred thousand acres of timber. The principal members of the firm Mr. Gaspard represents are executors of the Whittie estate, millionaire lumbermen.

—The Imperial Elevator Company, a Minneapolis concern, have decided to enter the Canadian Northwest. Besides building a number of elevators, it is the intention to establish a number of lumber yards at different points throughout Manitoba and the Territories. The Canadian headquaters will be at Winnipeg.

—There were eighty-eight special licenses to cut timber issued by the British Columbia Government during the month of March. This means that during that month the Government secured $8,800 in revenue from special licenses. It is estimated that 1,000 licenses will have been issued by the close of the first half of this year.

—The annual meeting of the St. John River Log-Driving Company was held at Fredericton, N. B., on April 1st. A. F. Randolph, of Fredericton, was re-elected president, and J. Fraser Gregory, of St. John, secretary-treasurer. The other directors are R. A. Estey, N. H. Murchie, Donald Fraser, jr., and John Kilburn, jr.

—Messrs. Jenkins, of Minneapolis, and David, of Blaine, Wash., who are interested in the Ross-McLaren saw mills at Barnet, B. C., have placed contracts for improvements to the mills, the intention being to resume operations at an early date. It is probable that about $150,000 will be expended in improvements and repairs, including new dry kilns and an electric plant. It is stated to be the intention to engage in the export trade, shipping direct by water.

—The workmen employed at the mills of the Hawkesbury Lumber Company at Hawkesbury, Ont., recently went on strike as the result of the refusal of the company to grant increased wages and other concessions. The strikers interfered with the operation of the mills and it was considered advisable to close down. A few of the men were inclined to be riotous, but peace was soon restored by the authorities. Within a few days a settlemet was reached, the men returning to work on April 15th under practically the conditions which previously existed.

—The Fredericton Boom Company have applied to the New Brunswick Government for authority to advance the prices charged for booming and rafting timber. It was proposed to increase the rate for rafting spruce and pine from 75 cents to 90 cents per thousand feet, and for rafting cedar from $1.20 to $1.40. Lumbermen objected to so great an increase, and as the result of a conference a compromise was reached. The new rate will be 85 cents for pine and spruce and $1.30 for cedar. In future all logs scaling less than 50 feet will pay a minimum toll of 6 cents each, instead of being charged by the thousand feet. In advocating the increased tolls the Boom Company pointed out that the size of the logs coming down the river is gradually decreasing year by year, and that it is just as expensive to raft a small log as a large one.

From William Rider & Sons, Limited, London, England, publishers of the Timber Trades Journal, we have received two valuable books. One is a copy of the 1903 edition of their "List of Shipping Marks on Timber," which embraces what might be termed the trade mark of the leading shippers in all the timber exporting countries. It indicates great care in its compilation, and, bound in cloth, sells at $1.50. The other book is designated "English Timber and Its Economical Conversion", and deals with the conversion and manufacture of timber in a manner which makes it of great value to the grower, the timber merchant and the manufacturer. It is claimed to be the first work of the kind. Chapters are devoted to "The Measurement of Round Timber", "Prices for Labour on Round Timber", "Methods of Drying", etc.

Emery Wheels, Corundum Wheels

and Grinding Machinery

All our wheels are first-class in every respect. All special shapes supplied without extra charge.

Are you using our **Improved Corundum Saw Grinding Wheels?** We guarantee them to cut faster and cooler than any other wheels on the market Will not burn saws and are just what your **filer wants.**

WOOD PULP DEPARTMENT

NEW PROCESS FOR PRODUCING MECHANICAL WOOD PULP.

In their new pulp mill, just nearing completion at Fraserville, Quebec, the River du Loup Pulp Company, Limited, have installed a system of machinery which, if equal in efficiency to the claims made for it, will simply revolutionize the pulp manufacturing business.

The actual process of grinding is unchanged, the improvement being in the method used for sheeting the pulp for shipment. Every person familiar with pulp mill machinery is conversant with the faults of the ordinary wet machine used for sheeting pulp, the excessive cost for felts, rolls, repairs, etc., and the comparatively small capacity of each machine, compared with the floor space it occupies. In the "Hughes process," as used by the River du Loup Pulp Company, the wet machine is entirely dispensed with and its place, together with the place of the expensive hydraulic presses, is taken by the Hughes hydraulic pulp machine, which with a capacity equal to a 72 inch wet machine, only occupies a floor space of six feet wide by nine feet long, and besides, dispenses entirely with felts, rolls, gears, belts, and all the other clumsy and complicated machinery now in use. An idea of the saving in floor space gained by the use of these new machines can be formed from the fact that the press room of the River du Loup Pulp Company, with a daily capacity of forty tons dry weight per twenty-four hours is, only 50 feet x 50 feet, and not only that, but sufficient space is left so that additional machines can be added, bringing the capacity up to fifty-five or sixty tons dry weight.

The process is this : From the screens, the pulp passes over a simple form of "slush machine" which extracts the greater part of the water, and leaves the pulp of about the constituency of porridge. In this form it is pumped directly into the hydraulic pulp machines, which consist of a "compression chamber" divided into four spaces by drainer plates covered with wire cloth, attached to which is a hydraulic cylinder on which any desired pressure can be exerted. Pulp is admitted to this compression chamber and pressure applied, which extracts the water through the drainer plates, and delivers the finished product in the form of sheets, 20" x 26" and about ¾" thick, a very convenient form for baling. Almost any test desired can be obtained, the dryness of the pulp depending entirely on the length of time that the pulp is left in the compression chamber, together with the amount of pressure applied.

In this process, the fibres of the pulp are not formed into a sheet, as on the ordinary wet machine, and consequently are not matted or interlaced, but simply compressed and the water extracted, leaving the pulp porous and spongy, and consequently much easier to reduce to pulp again in the beating engines of a paper mill. At least 10 per cent. of power can be saved, and in most paper mills power is an important item.

Besides the saving in floor space in construction of the mill, and the saving in felt cost, the installation is also much less costly than the ordinary equipment of a pulp mill, in that the heavy hydraulic presses, which are necessary for extracting the water under the old system of sheeting pulp, are entirely dispensed with. From these hydraulic pulp machines the sheets simply pass through a light baling press, to be made into bundles for shipment, or if for local consumption, the sheets can be shipped without bundling, thus dispensing with the baling press as well. The work being all done by hydraulic pressure no expensive equipment of counter-shafting, belts, etc., is necessary, and everything considered, a noticeable cost of production per dry ton is obtained.

For the accompanying illustration we are indebted to Mr. L. D. Post, of the Paper Mill, a New York trade journal. We are promised by Mr. K. L. Warren, constructing engineer of the mill above described, a set of photos of the interior of the press room, machines, etc., as soon as ready, which we hope to publish at an early date.

PULP MILL OF THE RIVER DU LOUP PULP COMPANY AT FRASERVILLE, QUE.

New paper and pulp mills are being rapidly brought to completion by the Canada Paper Company, of Windsor Mills, Que. The grinder room of the pulp mill is 50x158 feet, one storey, and will be equipped with ten grinders. The wood room is 49 feet wide and 82 feet ong, one-storey and basement.

SHERBROOKE, QUEBEC.

WHERE TO BUY SUPPLIES.

There is no part of the lumbering business requiring so much care as the purchase of supplies for the camp or the drive. We have taken considerable care in compiling a carefully selected list of the leading reliable dealers on both sides of the boundary line who make a specialty of catering for this supply trade.

We can confidently recommend to the buyers the following list of well-known firms, and advise the buyers to preserve this list as a handy reference when requiring the very best goods at the lowest prices :—

GROCERY SUPPLIES.

Among Canada's leading wholesalers the well-known firm of H. P. Eckardt & Company, of Toronto, rank high. They make a special feature of the lumber camp supply business, and hold a large share of this trade. By studying the wants and needs of the lumbermen they have augmented this trade until at present it has assumed prodigious proportions.

Lucas, Steele & Bristol, Hamilton, are well and favorably known to most lumbermen, but despite this fact they believe in advertising. As a consequence they are doing a great share of the supply business. Many firms when approached on the immense lumber camp supply business say "Oh ! we know all of them, and they all know us ! !"—meaning that the business is not worth much to them. But Lucas, Steele & Bristol cater to this branch of the trade and as a consequence are getting and will get new customers right along.

W. H. Gillard & Company, of Hamilton, make a specialty of everything in the line of grocery supplies, especially dried fruits, lard, beans, teas and coffees. They are a wide-awake, progressive firm, putting out first-class stock.

The Whitehead-Turner Company, of Quebec, is one of the largest firms in that province. They have a large trade with the lumbering interests, and many of the latter have dealt with them exclusively for years.

The Davidson & Hay, Limited, 36 Yonge street, Toronto, are wholesale grocers and importers, doing a considerable camp supply business. The company is well and favorably known by lumbering men.

Perkins, Ince & Company, Front street, Toronto, can interest buyers when quantity, quality, and prices are essential considerations. They are noted for the A1 condition of their supplies.

T. Long & Bro. Company, Limited, Collingwood, have for many years done a great trade with the lumbermen, particularly around the Georgian Bay and Lake Huron districts. They push out for it and get it while other firms are waiting for the buyers to hear of their existence.

Some wholesale grocers imagine that their travellers should catch all the buyers of lumber camp supplies. How such a foolish notion can enter the head of a supposed "business" man is past comprehension. By sending out hundreds of letters and enquiries and by personal canvas of our own travellers, it is found that not ten per cent. of the lumber camp supply business can be reached by travellers, because the buyers are evanescent and are changed frequently, as well as for the additional reason that the camps are changed, new conditions arise and the buyer is often far away from the camp or his firm's headquarters when he buys his supplies.

MEATS, PROVISIONS, ETC.

In the travels of our representative throughout Canada, Michigan, Wisconsin, etc., he frequently met with complaints against the meat providers regarding the inferior quality sent into some of the camps. Talks with the buyers, the cooks, and even the men showed in some cases a harsh indictment against the disposers of rancid pork and embalmed beef.

We can vouch for the firms we list herewith as having not a single comment against them, in the above respect, and they are as well the largest in the various lines and spheres

The attention of lumber camp outfitters is called to he advertisements in this issue. These representative establishments thoroughly understand and appreciate the needs of the Canadian lumberman. They have made a careful study of the meats best adapted to those men who lead rigorous out-of-door lives and want hearty sustaining foods. In the selection of corn-fed hogs, the preparation of material and the final inspection, the greatest care is manifested at every stage to insure uniform fine quality and maintain the high standard of food product excellence.

The Wm. Davies Company, Limited, Toronto, are doing an immense business in the line of meats, etc. This company have the services of two noted experts, Drs. Smale and Addison. No harmful adulterations or rancid meats are allowed by the company to be put on the market. The Davies brand is noted for its excellence.

Swift & Company, Chicago, is a well-known establishment, and thoroughly appreciate the needs of the lumbermen. In addition to the main house at Chicago covering over 40 acres, they have large packing houses at Kansas City, Omaha, St. Louis, St. Joseph, St. Paul and Fort Worth. Not only are their facilities of the best, but the output is the best that can be produced. Five thousand Swift refrigerator cars quickly and safely transport the company's products to over two hundred and fifty branch houses.

Schwarzchild & Sulzberger Co., Chicago, New York and Kansas City, are large providers to the supply trade, particularly in beef and pork. They have a splendid reputation for fine products.

The Omaha Packing Company, Chicago, whose advertisement appears on another page, will be pleased to quote prices, etc., to all buyers, and guarantee satisfaction.

The Whyte Packing Company, Stratford, Ont., do a good business. Their product is of a superior grade and price as low as any.

Fowler's Canadian Pork Packing Company, Hamilton, are now going into the lumber camp supply business extensively. They have an immense plant at Hamilton and good shipping facilities.

Park, Blackwell & Company, Toronto, general providers, have for years done considerable trade with the larger lumber firms.

The Capstan Mfg. Company, Jarvis street, Toronto, are famed for their mince meats, etc. This company are alone in special lines which they provide for the camp and their product, we are informed, is highly appreciated by those who use it. They certainly have a fine clean way of putting up their goods.

W. Clark, Montreal, makes a specialty of pork and beans and canned corned beef.

WEARING APPAREL.

The Hudson Bay Knitting Company's two page advertisement in this issue should be consulted by all lumbermen. This company is one of the largest of its kind in the world. They carry an enormous stock and are able to fill quickly the largest orders.

The Herold-Bertsch Shoe Company, of Grand Rapids, Michigan, make a specialty of larrigans, swamping and cruising boots, etc. This firm is one of the wide-awake companies who are pushing out for the world's trade.

Rindge, Kalmback, Logie & Co., Grand Rapids, of whom we speak in another portion of this issue, do a great business in lumbermen's boots and shoes.

John Palmer, Fredericton, N.B., makes a specialty of foot-wear, etc. His advertisement should be consulted.

Wm. A. Holt, of St. Andrews, N. B., is one of the most reliable dealers in the maritime provinces. See his advertisement in this issue.

Attention is called to the announcement of Clayton & Sons given in this issue. This firm has a splendid reputation with the lumber trade.

J. J. Turner & Sons, of Peterboro, make waterproof clothing, etc. They have one of the largest manufactories in this line in the Dominion. Considerable quantities of waterproof clothing are needed in the camps and there is nothing better than the make of this firm.

Woods Limited, Ottawa, make a specialty of overalls, top shirts, driving pants, underwear, shoes, hats, moccasins, etc.

MEDICAL SUPPLIES.

Immense quantities of medical supplies are used in the camps every season, both for man and beast. For many years Johnston & Company, of Collingwood, Ontario, have held the bulk of this vast trade, solely by reason of the superior quality of their liniments and remedies.

CAMP STOVES.

Considerable difficulty has been experienced by lumbermen in securing a stove suitable for the varied needs and hard usage to which such are subjected. In our columns will be found the very best that is produced, either in Canada or the United States, in this line.

Adam Hall, of Peterboro, is a pioneer in the matter of lumbermen's stoves. We will give a fuller description next month of their excellent makes.

The Gurney Foundry Company have for years been putting out a superior stove that has been pronounced as perfect.

We give in another column a description of the Wisconsin stove made by the Watson Bros., of Marinette, Wis. This portable stove will be seen in Canada for the first time this year.

GENERAL SUPPLIES.

In the matter of tents, waterproof horse and wagon covers, the J. J. Turner & Sons Company, of Peterboro, rank high. They also manufacture feed bags, coal bags and waterproof goods of every description. Lumbermen should send for their catalogue "A".

Morley Bros., Saginaw, Mich., are manufacturers and dealers in general supplies, including harness, etc.

Woods Limited, Ottawa, also make tents and tarpaulins.

Attention is drawn to the advertisement of H. F. Falkner, Toronto, in this issue. His horse blankets, horse covers, sweat pads, collar pads, etc., are the finest in the market. He manufactures his own material and this enables him to secure the trade. He is also a dealer in curry combs, brushes etc.

In one of the camps a motto "What is Home Without a Mother?" was changed to "What is Camp Without Tobacco?" The American Tobacco Company have a great trade with the lumber camps and supply houses.

Of course the horse must be fed, and if you want to get the very best at the lowest quotations send to W. H. Dwyer & Company, Ltd., of Ottawa. They make a specialty of hay, oats etc.

The Dominion Molasses Company, of Halifax, N. S., can supply molasses that is molasses—pure, clean and the real genuine Barbadoes, such as the boys in the woods like.

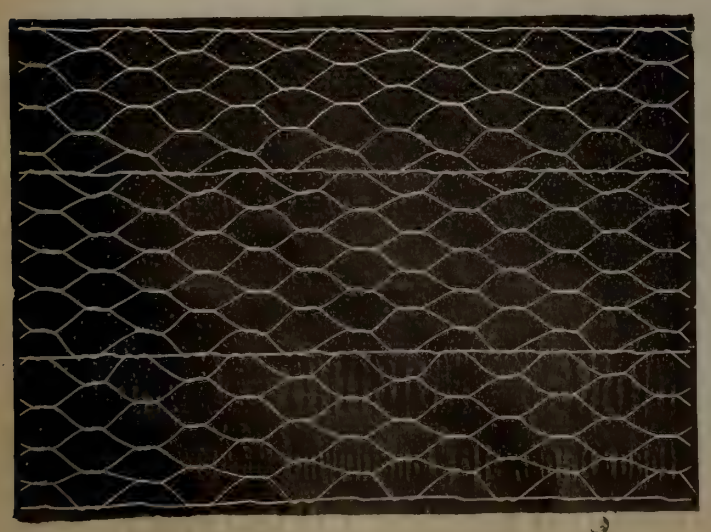
For flour, pot barley, oatmeal etc., every lumberman should get quotations from Walter Thomson & Son, of London, Ontario, before placing a single order. Their product ranks as high as any in the world, and superior to many.

For the varied uses in the camp, such as marking clothing, blankets, etc., stamps are required. These can be furnished by the C. G. Young Company, corner Yonge and Adelaide streets, Toronto, who make rubber stamps of every description for all sorts of requirements, steel dies for marking or branding logs or lumber, and brass stencils for boxes, barrels, etc.

Many large lumbering firms complain of petty thefts and pilfering of their supplies every year. One company place their loss at many hundreds of dollars each year, whilst another said they calculated on a loss of ten per cent. It is not necessary for these losses if any care at all is given to the supplies. Noble's Dominion Detective Agency, of Toronto, supply men to go with the supplies or to go into the camps and prevent these enormous losses at very small cost. This agency is the very best of its kind and we can confidently recommend them to all lumbermen requiring faithful and efficient service in preventing the loss of supplies.

NEW CENTURY FENCE

The Strongest Fence Made



Advantages

OF

"New Century Fence"

1. It is the strongest, as every wire counts lengthwise.
2. It does not sag.
3. It is easily put up, and makes a fine appearance.

MANUFACTURED BY

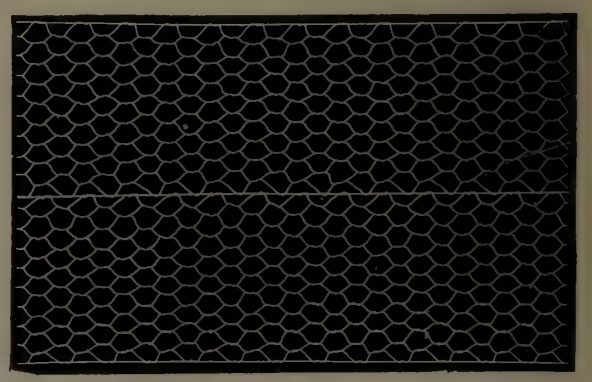
The Ontario Wire Fencing Co., Limited

PICTON, Ont.

Write for prices and particulars.

NEW CENTURY NETTING

The Latest and Best



1. It is stronger than any other netting.
2. It is easily erected and makes a fine appearance.
3. Less posts are required than for other nettings.

CAMP SUPPLIES

We have for years made a specialty of Lumbermen's Camp Supplies, including everything required in the Grocery and Provision line. We have been successful in supplying goods in quality and at prices which almost invariably bring repeat orders, for is it not the fact that quality of goods is required now, more than at any other period in the history of the industry. We are usually in a position to supply good quality at very nearly as low a price as the cheapest goods offering, and for this reason they are far more economical. We offer subject to being unsold and market changes:

Choice Evaporated Apples	**5 1/2 cents**
Taps Comadre Figs	**3 1/4 cents**
3 lb. Canned Whole Strawberry Beets, per doz	**45 cents**
Boulters 2 lb. Corn, per doz	**80 cents**
Perth 2 lb. Refugee Beans, per doz	**70 cents**
Fine Filiatra Currants, (cleaned)	**4 3/4 cents**
Choice Sair Dates	**3 3/4 cents**
100/110 Santa Clara Prunes in 50 lb. boxes	**3 1/2 cents**
90/100 Santa Clara Prunes in 50 lb. boxes	**4 1/2 cents**
80/90 Santa Clara Prunes in 50 lb. boxes	**4 3/4 cents**
60/70 Santa Clara Prunes in 50 lb. boxes	**5 3/4 cents**
40/50 Choice Oregon in bags	**6 1/2 cents**
Trinidad Grocery Sugar	**2 7/8 cents**
Cane Sugar Syrup (good flavor) in half barrels	**1 3/4 cents**
Pearl Tapioca	**2 3/4 cents**
Choice Quality Black, or Mixed Black and Green, Ceylon Tea	**16 cents**

NEW HUDSON BAY KNITTING COMPANY FACTORY.

The accompanying illustration represents the new factory of the Hudson Bay Knitting Company in Montreal. Generally speaking the building in which a business is conducted is not so interesting or so important to the customers of the house as the principles upon which the business itself is conducted.

The policy upon which the Hudson Bay Knitting Company has developed from a very small beginning to the present large proportion is one that commends itself to every live retailer in Canada who handles goods which the company manufacture. They make all kinds of warm clothing, caps, lumbermen's coats, lumbermen's socks, mitts and gloves and underwear in a very large variety. It is less than fifteen years since this business was started in one room, and during that time the company has been obliged to move and extend its premises half a dozen times, the factory here illustrated now being their new premises. Mr. J. J. Westgate, president and manager of the company, is the moving spirit of the concern, and it is largely due to his foresight and progressiveness that the business has grown to its present unique position. It is unique in the fact that none of its competitors ever succeed in catching up with the lines put out by the Hudson Bay Knitting Company. Always originating something new, always introducing improvements, carefully watching the trend of popular demand, their goods always show points of superiority over their competitors, who usually turn up next season with the same things. In the meantime the Hudson Bay Knitting Company has developed new ones, as they always keep a season ahead in their lead. They have recently decided to push the lumbering trade vigorously and for that purpose have developed a large number of lines specially adapted for the lumbering trade. Readers of THE LUMBERMAN interested in the supply business may find it profitable to look over their two page ad. in the front part of this number.

NEW FACTORY OF THE HUDSON BAY KNITTING COMPANY, MONTREAL.

HAND CUT FILES AND RASPS.

The largest hand-cutting file works in the United States is situated at Columbus, Ohio, operated by the Reynolds Brothers, and known as the Buckeye Saw Mfg. Company. They also manufacture all kinds of circular saws, sending them to all parts of the continent. Their celebrated hand-cut files are world renowned and are made in all sizes and shapes from 1 inch to 50 inches. When our representative called, he was shown over a veritable bee-hive of industry, and the processes from crude steel to the finished article were seen in course of manufacture. Alongside of the dainty little jewellers' file was placed an enormous special hot file which weighed fully 80 lbs., and destined to be handled by two men. Send for this firm's catalogue of saws and files.

James McNair, of Vancouver, B.C., has purchased another mill site at that place.

We are told that "one of the most extensive users of band resaws in the United States, resawing pine, has found 1½ inch spacing, ½ pitch, and tooth ⅜ inch long, the best specification for 6 inch saws, and this spacing preferable to 1¾."

PERSONAL.

The death occurred recently of Mr. James H. Belton, of London, Ont. Mr. Belton, who was in his eighty-first year, had been engaged in the lumber business for forty years.

Mr. Aubrey White, Assistant Commissioner of Crown Lands, Toronto, received many congratulations last month upon the occasion of the fifty-eighth anniversary of his birthday.

Mr. N. A. Gladding, vice-president and secretary of E. C. Atkins & Company, saw and tool manufacturers, Indianapolis, Indiana, has been appointed as one of the comissioners from Indiana to the Louisiana Purchase Exposition and World's Fair, to be held in St. Louis, 1904.

It is understood that Mr. John Bertram, of Toronto, president of the Collin's Inlet Lumber Company, will be appointed a member of the Government Commission on Transportation Problems. Mr. Bertram has been deeply interested for many years in the transportation and ship-building interests, and is president of the Bertram Engine Company, of Toronto.

WASTE SAWDUST.

126 Abbot Avenue, Westmount, April 21st, 1903.

Editor CANADA LUMBERMAN:

Dear Sir,—Being interested in a process for utilizing sawdust I am anxious to obtain information of the amount that is produced annually by the mills in Canada, and to this end I would be pleased to have your readers send post card with answers to the four following questions:

No. 1. How many months do you run?

No. 2. How much sawdust does your mill produce? yearly, as near as possible.

No. 3. What use do you make of it?

No. 4. Name and address.

Sincerely yours,

CHAS. W. PEARSON.

Watson's Portable Air Tight Baker

The most convenient stove ever constructed for use in the Woods, on the Drive, in the Camps. Bakes as perfectly as the finest range.

Read What Experienced Woodsmen Say of it:

"We used your Portable Woods Baker all last season with a crew of men in the woods, travelling from place to place. We found it convenient to handle and the best steel range cannot beat it in baking. It is a perfect baking oven and a success in every way.

The cooking is not affected by rain or weather and can be used outdoors or in a tent."

Yours truly,
MENOMINEE RIVER BOOM CO.,
Per Wm. H. Stephenson, Gen'l Supt

We make these stoves in three sizes. Our No. 10 will cook for ten men; our No. 20 for twenty men, and No. 50 for from fifty to one hundred persons.

We want those interested in a stove of this kind to write us for full description and prices.

Horse Sense

Could be taken to mean Common Sense in the treatment of your horses. All Lumbermen depend largely on the efficiency of their horses. This can easily be maintained if

Johnson's Veterinary Remedies

are used.

The following valuable preparations have been largely in use amongst the Lumbermen of the Dominion for years. They are put up in bulk and are therefore more economical than similar lines, as the cost of packages, bottling, etc., etc., is saved:

Johnson's Horse Liniment No. 1
A penetrating Alcoholic Liniment for Sprains, Strains, Bruises, Swellings, Lameness, Curbs, Splints, etc., etc., $4.50 per Imp. gallon.

Johnson's Horse Liniment No. 2
An excellent Oil Liniment for the same purposes, $3.00 per gallon.

Johnson's Horse Colic Remedy
An absolutely safe and quick remedy for Colic of all kinds, $5.00 per Imp. gallon.

Johnson's Veterinary Healing Ointment
Positively the best all round Healing preparation on the market for Cuts, Corks, Sore Shoulders, Wounds Galls, Scratches, etc., etc., $2.25 per 2 pound tin. Put up in 4 ounce tins if preferred.

Ten per cent. discount off orders amounting to $50.00 or upwards. A full stock of all Drugs and Patent Medicines kept always on hand and at lowest wholesale rates. Correspondence solicited. Orders by mail receive special attention. Let me figure on your requirements.

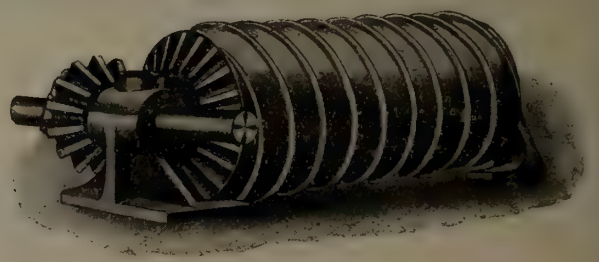
Rolls with connected stands. No wear on your shaft. Very easily put on.

Chilled Tooth Rolls

These are the best made. They are cast on end. The teeth do not wear. Rolls are made any length. Split pinions for repairs. They are cheap. Pinions will bolt on the shaft anywhere.

CONCAVE ROLLS for log decks.

SCREW ROLLS with sharp thread.



We also make Log Chains, Log Decks, Friction Log Turners, Log Loaders, Steam Niggers, Saw Carriages, any size that you want, and Shingle Machinery, Saw and Knife Jointers, etc. Send to us for Catalogue.

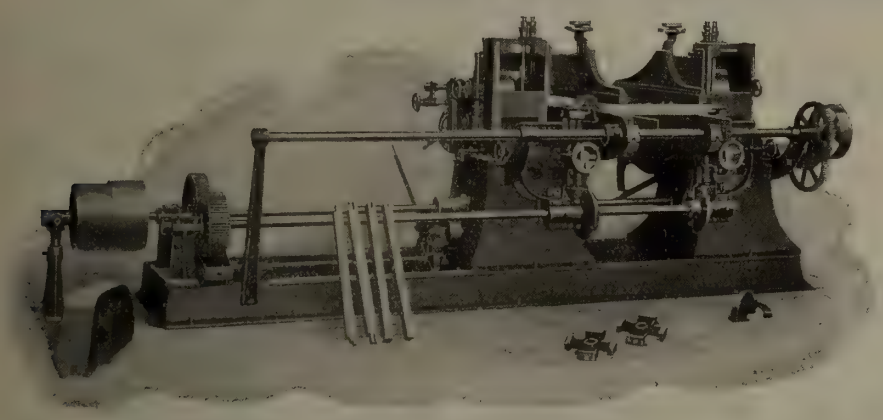
CONVEYING MACHINERY

William R. Perrin & Company
TORONTO, CANADA.

The first of its kind on the market. New and original and first introduced by us

E. B. HAYES MACHINE CO., Oshkosh, Wis.



When a new and improved machine that has great merit in it like this one, is put onto the market, often times other machinery manufacturers will recognize the fact that it will be a good seller and they will try and start in to copy, of course providing they can do it. We expect it may be the case with this machine, but we know that all the mill men purchasing machines will want the Original, for many mill men in the past have met with great disappointment in buying copied machines. Write for full information.

OVER 35,000 IN USE
IN EVERY KIND OF TIMBER

THE ONLY SUCCESSFUL
INSERTED-TOOTH SAW.

THE TWENTIETH CENTURY SAW

Our Chisel-Tooth Saw is adapted to all kinds and conditions of sawing, and does equally well in hard or soft woods, winter or summer, large or small mills.

It increases the output of the mill, requires less power and makes better lumber at less cost than any other saw.

Improved Gang Lath Machine

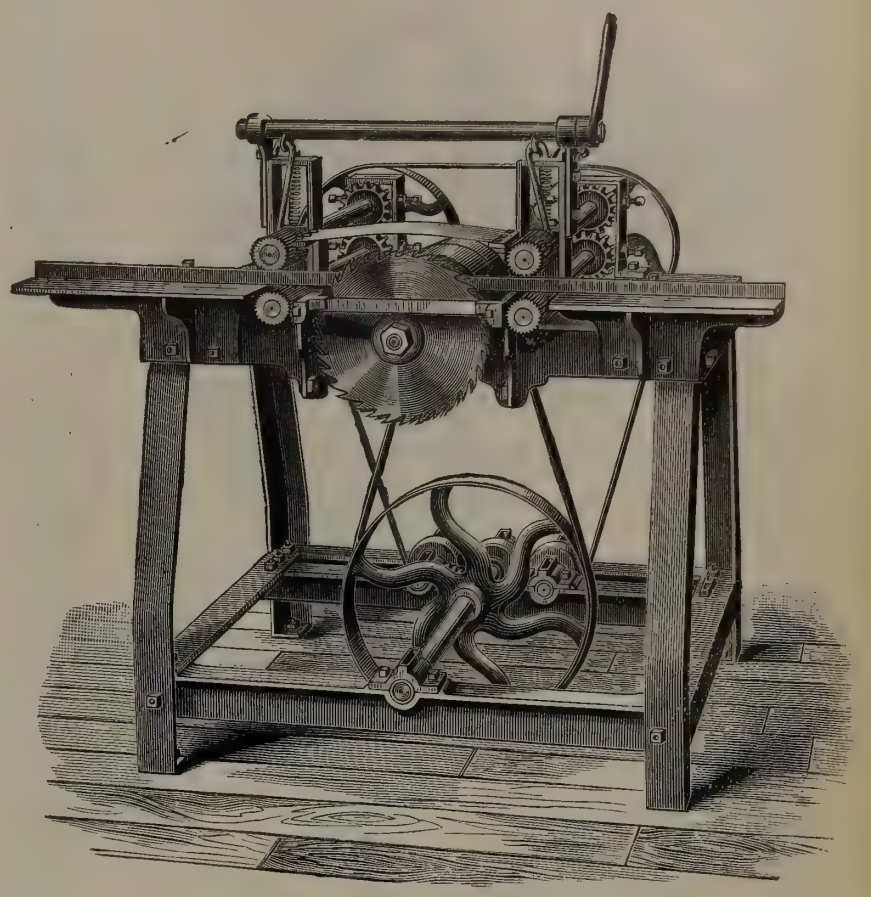
This machine is entirely self contained—does not require a counter-shaft and pulley to drive the feed from.

It has a solid iron frame. The feed rolls are milled from solid steel bar and case hardened. In fact the machine is constructed of the best material throughout. Carries four 12 inch saws and will do fully as much work as any other machine made for the same purpose.

I manufacture other lath machines much heavier than this cut shows, and lath bolters of various capacities.

I also have a full line of saw mill and shingle mill machinery, and can quote low figures, especially to cash customers.

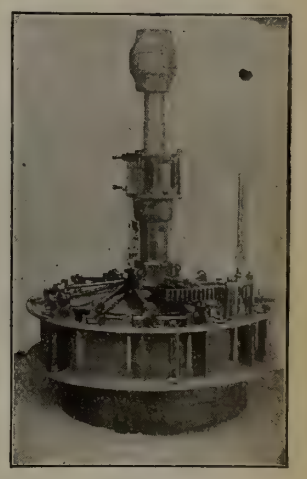
CATALOGUE FREE.



F. J. DRAKE, - Belleville, Ont.

Do You Need a Turbine?

Now is the best possible time for replacing your old, worn-out wheel with a new Turbine that will save Worry, save Time, and make Money for you. If you want a well built wheel, a wheel that will give you steady reliable power every day, a wheel that will save water, a wheel that will last you a lifetime, and that is sold at a reasonable price, then write us for catalogue and prices on the



Standard Leffel and Vulcan Turbines.

They are better developers to-day than ever before, and are growing in popularity, as our order books show.

We have now for distribution our new **SAW** and **SHINGLE MILL MACHINERY CATALOGUES,** with engravings and descriptions of our machines with their latest improvements. We will be glad to send you one on receipt of your address. You cannot buy a better Portable Mill than the "Lane Improved".

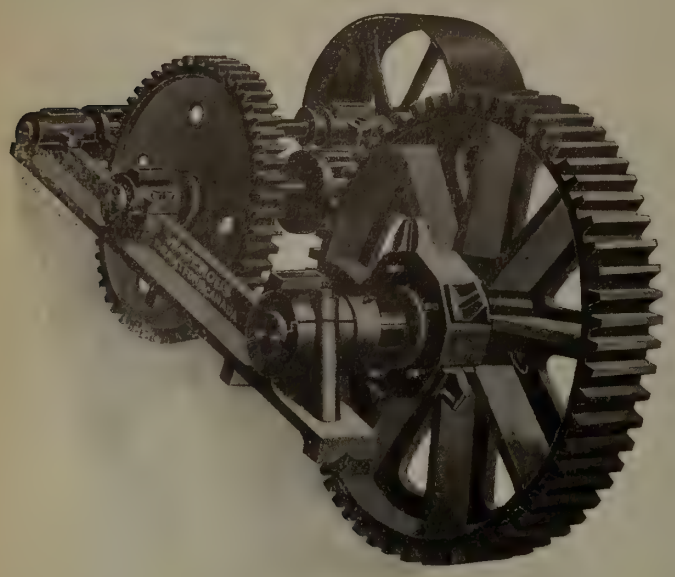
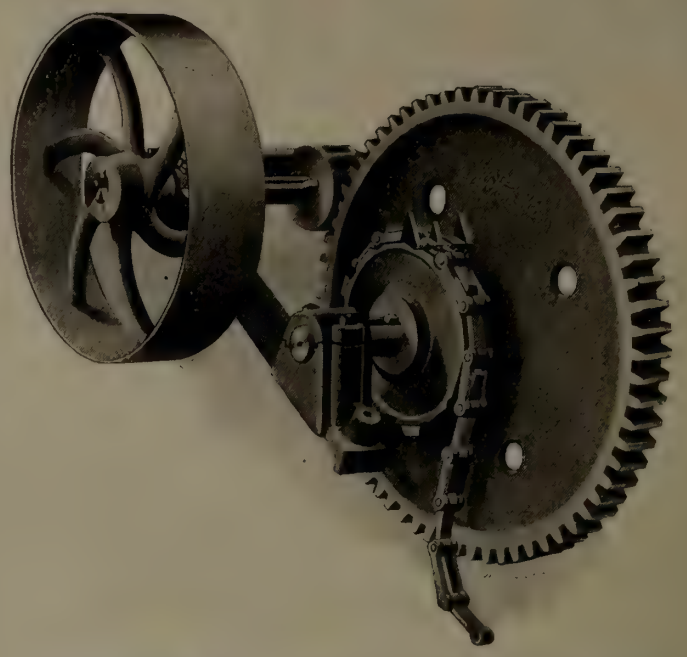
ENDLESS CHAIN BULL-WHEELS OR LOG JACKS



WATEROUS NO. 0 DOUBLE-GEARED LOG JACK

With spur gear to drive from shaft running across mill.

When needed to drive from shaft running lengthwise of mill, we replace smaller spur gears with bevel gears or frictions placed outside of iron frame.



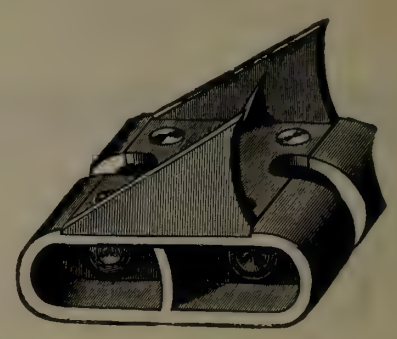
WATEROUS NO. 1 SINGLE-GEARED LOG JACK

With No. 86 log chain. Cast steel spurs and centre links, steel side links, 6″ pitch. No. 80 log chain is the same style but heavier with drop forged center links, 8″ pitch.

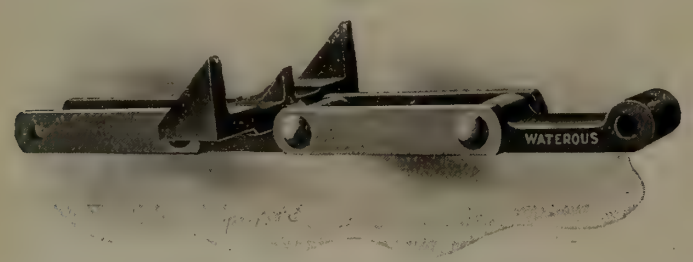
PULLEYS CAN BE READILY REPLACED BY STRAIGHT FACE FRICTIONS.

Cable Chain with Cast Iron Log Spurs

Chilled wearing shoes 4x12″ on each side round link. Made 10″, 12″, 14″ wide for 1″, 1¼″ and 1½″ chain. Can't turn on chain.



Malleable Log Chains—Detachable, readily applied.



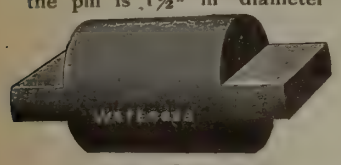
No. 86 Steel Chain (Cast Steel Log Spurs).

Rivets ¾″, side bars 1¾x⅝″, 8″ pitch, center (cast steel) 2¼x6″ pitch. Spurs 9″ point to point.

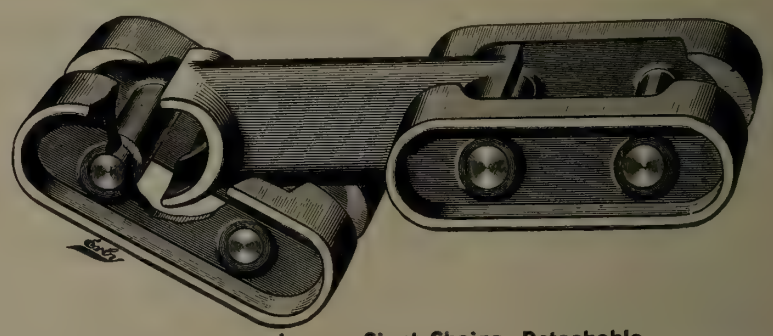
No. 80 Steel Chain

Is 8″ pitch similar to above, except that solid link is a drop steel forging the pin is 1½″ in diameter (like illustration) and is fixed in position connecting side bars, presenting a large wearing surface for solid link. Side bars 2x1½′

Taking a safety of 4½″ this chain gives a 10,000 lbs. working strain. Log spurs same as No. 86 or of heavy forged steel, any spread desired.



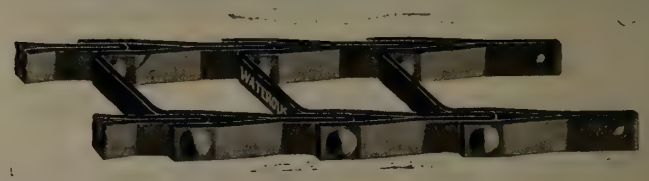
PIN OF NO. 80 CHAIN.



No. 1050 and 1075—Giant Chains, Detachable.

Not recommended for salt water—but there is no better chain for fresh water.

Forged Refuse Chains



R. Double.

Outside width 12½ in.—Made of 1½x⅜ in.

The 10 to 15 Tons of Ewart Detachable Link Belting we carry in stock insures prompt shipments.

Bureau: No. 142, rue de l'Eglise.

QUEBEC, January 31st., 1902.

MESSRS. THE A. H. ANDREWS CO., Chicago, Ill.

GENTLEMEN:—Replying to yours of the 28th inst. I am pleased to say the Dry Kiln I purchased of you is giving good satisfaction. I am drying all kinds of lumber in it, and use exhaust steam in the day time and live steam at night. I am well pleased with the Morton Patent Moist Air Down Draft Dry Kiln, and have no hestitation in recommending same.

Yours truly,

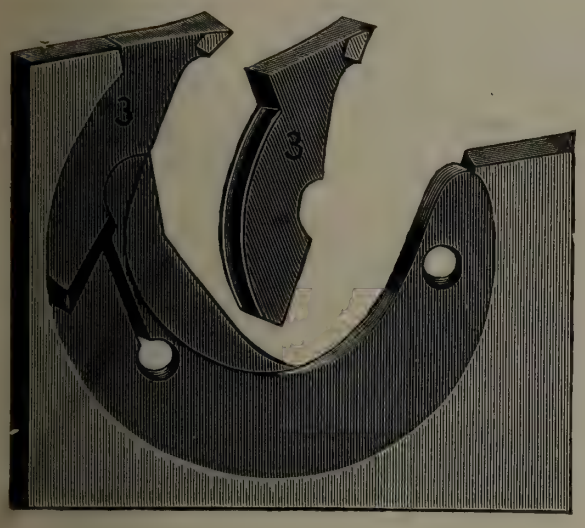
R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

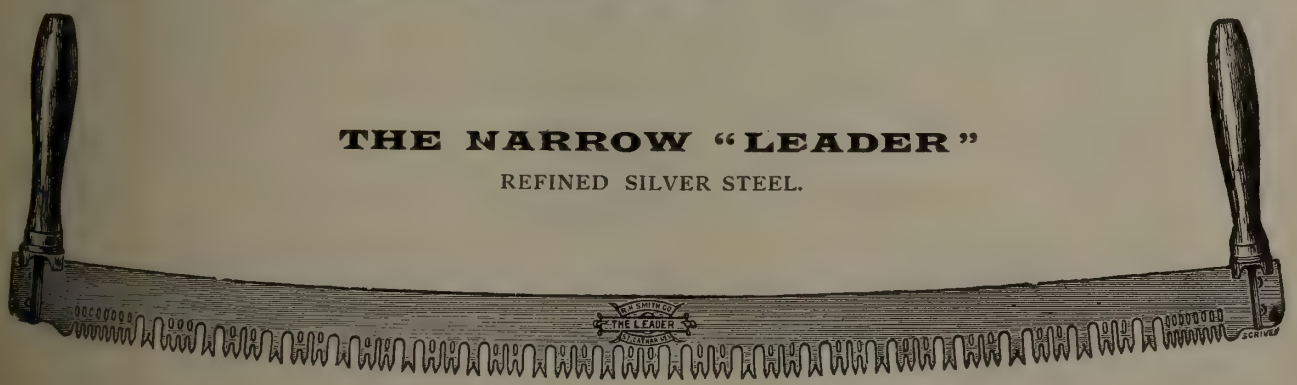
Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS



THE NARROW "LEADER"
REFINED SILVER STEEL.

The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Write for prices.

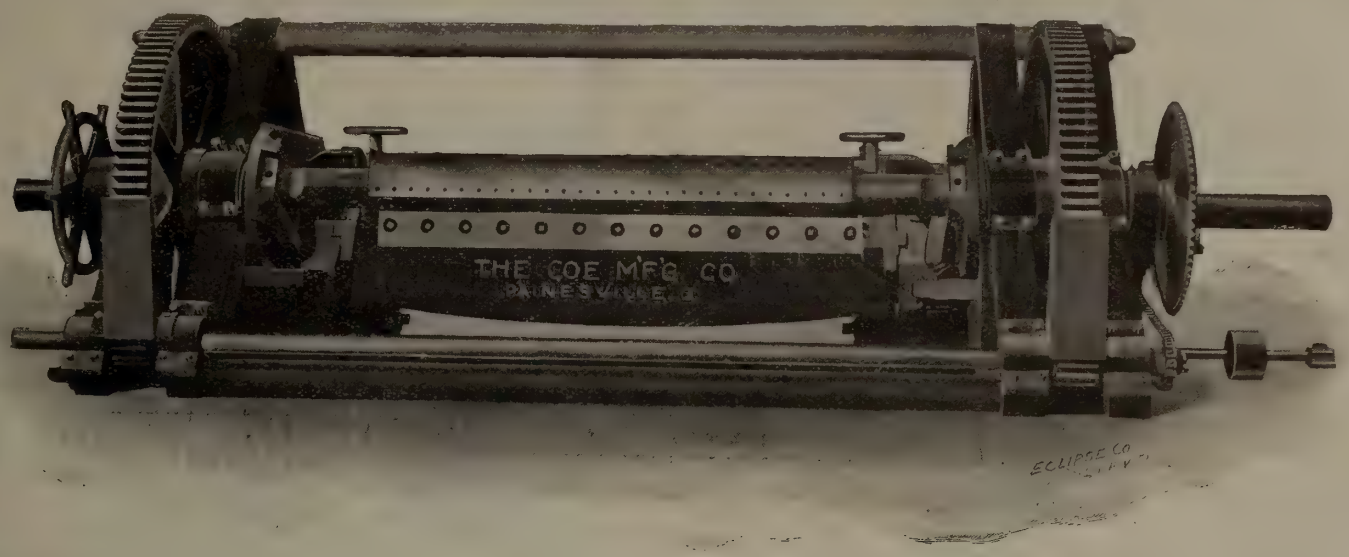
Our Celebrated

Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition to reduce logs into thin lumber and veneers.



The product is high grade.
The output is great.
The cost of operating and maintenance is reduced to a minimum.
Quite a combination, is it not ?

Timber and mill owners should get in early.
Buy a Coe Veneer Cutting and Drying outfit and prepare to supply thin lumber and veneers which have a healthy growing demand. More money in it than sawing your logs into lumber.

WRITE US.

THE BEST IN THE WORLD

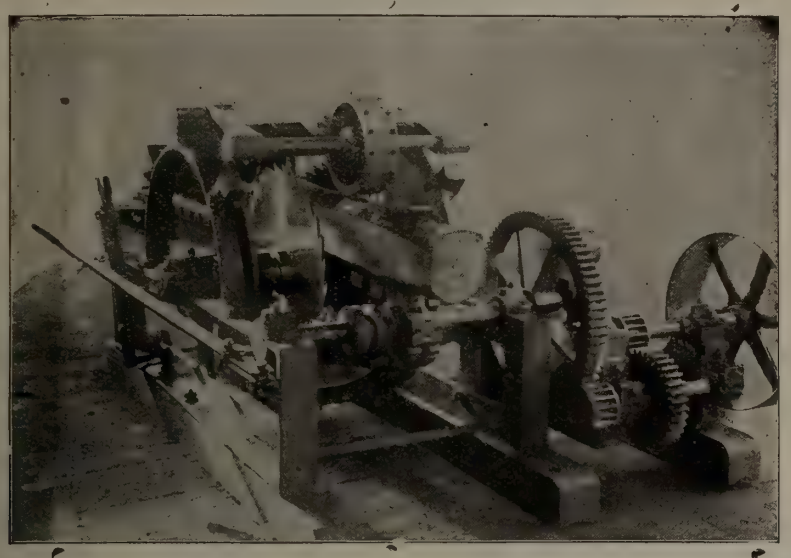
There is no doubt about the fact that the

RODGERS

Adjustable Log Siding Machine

is without a peer.

This machine will slab opposite sides of a log in one operation at the rate of two thousand logs in 10 hours.



A MONEY MAKER **A MONEY SAVER**

HUNDREDS OF LETTERS RECEIVED LIKE THIS :

Rock Island, Ill., Nov. 25, 1902.

RODGERS IRON MANUFACTURING CO., Muskegon, Mich.

Gentlemen :—Replying to yours of recent date and referring to your adjustable log siding machine, must say it has given us general satisfaction, and we have done good work with it. Anyone desiring a machine of this style for the purpose of slabbing small logs, we would recommend yours. Respectfully, WEYERHAUSER & DENKMAN.

The World-Famous **"TOWER"** Line of Edgers

1,000 IN DAILY USE.

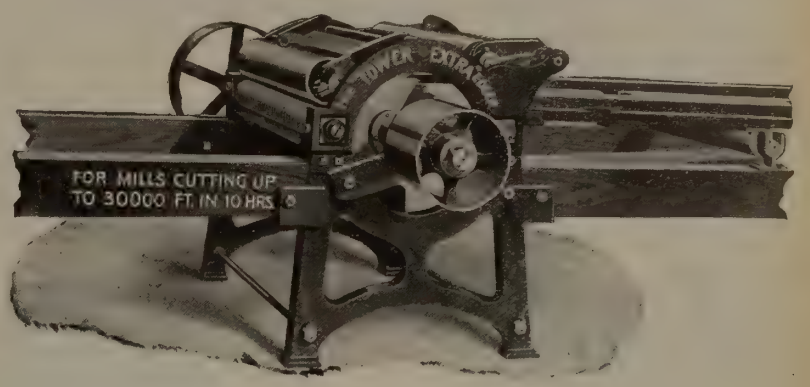
MADE IN TWO SIZES, AS FOLLOWS :

The "TOWER" 2 and 3-saw Edgers, Improved.

For Mills cutting not to exceed 20,000 feet in ten hours.

The "TOWER EXTRA" 3-saw Edger.

A larger and heaver edition of the "TOWER," for mills cutting up to 30,000 feet.



1. They take up little room.
2. They require little power.
3. The feed rolls are adjustable in FOUR directions, which means absolute accuracy.
4. The saws may be removed easily and quickly, without disturbing the arbor.
5. The mechanism for shifting the saws is up-to-date, convenient and positive.
6. The vital parts are carried by a substantial iron husk resting solidly on the floor.
7. They are pre-eminently practical.
8. There is no edger made approaching them in cheapness.

"The No 8 'TOWER EXTRA' Edger bought of you in January is immensely satisfactory."
KEO SHINGLE CO., England, Ark.

The "TOWER" One-man 2-saw Trimmer.

With this trimmer one man can easily trim the output of a mill cutting up to 30,000 ft. in ten hours. The shifting crank being secured to one of the chain carriers, the operator shifts the saws as he walks toward the board to be trimmed, thus performing two operations simultaneously. This saves time.

There are two feeds, easily and quickly started, stopped or changed, without stopping the saw s One lever controls both feeds.

Is your power being transmitted at the lowest possible cost ?

Are you wasting power in quarter turn or right angle belt drives, when a rope drive would minimize the loss ?

Are you using iron pulleys in places where wood pulleys would answer just as well, and save you carrying an added weight on your shafting ?

Are you using cut off clutch couplings, so that you can stop any particular drive when you do not require the power ?

Is your shafting of proper size—not too large or not too small to take care of the horse power requirements you demand of it ?

In short—have you any knotty problems in power transmission to solve ?

If you have, consult with us—not only are we transmission engineers, but specialists in making machinery for heavy use. We'll work from your patterns or will design the machines for your needs.

MAGNIFICENT NEW MILLS OF THE PACIFIC COAST LUMBER COMPANY.

The shareholders of the Pacific Coast Lumber Company include several well-known and successful Ontario lumbermen, Mr. W. J. Sheppard, of Waubaushene, being president, and Mr. J. G. Scott, of Vancouver, vice-president and general manager. Thus when it was announced, a little more than one year ago, that the company had decided to establish mills at Vancouver, it was taken for granted that an establishment of immense proportions and up-to-date in character would be built. That the anticip. t ons of the public in this respect have been realized is proven beyond a doubt by the splendid illustrations of the completed mills which we are enabled to present in this number.

PACIFIC COAST LUMBER COMPANY, VANCOUVER, B. C.—GENERAL VIEW OF NEW MILSS.

The site is on Coal Harbor, a sheltered little bay at the west end of Vancouver's Harbor, admirably adapted for the purposes of a saw-milling establishment. Excellent facilities are provided for shipment by rail or water. The location immediately adjoins the westerly end of the Canadian Pacific Railway terminus, and a short extension of the main line on to the property of the company affords rail shipment, while the Empress liners and all water traffic pass within a hundred yards of the mill.

Construction work was begun in January, 1902, and what had hitherto been a boggy, tide-land flat has since then been converted into a most attractive hive of industry, giving employment to many scores of workmen. The shingle mill was finished first and began operations in June of last year, while the whole plant was completed and in operation the beginning of May last. Work proceeded without any fuss or feathers, newspaper publicity was neither sought nor encouraged, the management preferring to let finished results speak for themselves. Practical men concede that the whole plant presents as strong a combination of good points, with special consideration to economical manufacture, as any saw mill in the west. There are many larger mills, but none more thoroughly up-to-date.

The saw mill occupies the east side of the company's property and is 60 x 300 feet, two stories in height. The big log haul-up is of the Wm. Hamilton Company pattern, is composed of 1¾-inch chain with cast steel brackets fast ened at intervals thereon, and is capable of handling the largest logs with the greatest ease. The mill is equipped with two ten-foot band saws, one on either side of the log deck, from which both of the carriages may take logs, although one side of the mill is more properly intended to act as the re-sawing side. Both of the bands and carriages were made by Clark Bros., of Belmont, N. Y. The heavy side is equipped with a Simonson log turner, by means of which the heaviest as well as the smallest logs are loaded on to the carriage or turned as easily and lightly as if they were hop poles. Both carriages are driven by Cunningham twin steam feeds. Transfer chains convey the "cants" from the heavy side of the mill over to the re-saw carriage, and further down the mill additional transfer chains convey the sawn lumber from either side of the mill to the centre, where the powerful Hamilton edger is placed, and live rollers carry the heavier timbers on out to the timber delivery end of the mill.

No back-breaking, man-killing jobs are to be found in the whole mill, levers that a child can manipulate are operated and men's brains and steam power called into action. At the tail end of the edger the edgings and slabs are dropped on the floor of the mill and are carried by more transfer chains over to the slab smasher saws, where they are cut up into four-foot lengths and dropped into a conveyor which passes along on the outside of the mill.

From the edger the lumber is carried on live rollers to a camel back transfer and across the mill to the trimmer saws, where it is cut into the various lengths required. It then passes out on slow running transfer chains over the sorting platform and is sorted into the various sizes and grades and passed on to the kiln cars which stand close alongside. When loaded these cars are moved by gravity to the dry kilns, and when the lumber is sufficiently dried, the loaded cars are again moved to in front of the planers in the planing mill. By this system some four or five handlings of lumber are saved as compared with the systems in force in most mills, and the saving in cost effected means almost a living profit.

From the timber delivery end of the mill, heavy timber or other lumber reaching there is placed on cars, and is passed along an elevated tramway running to the lumber yard, where it is either loaded on railway cars for final shipment, piled along the track for shipment later, alongside vessels for foreign shipment, or along wagon road for local trade. So well is this delivery of lumber

PACIFIC COAST LUMBER COMPANY, VANCOUVER—SAW MILL.

arranged that horses are not required about the mill.

The planing mill is about 100 feet from the saw mill and is 72 x 120 feet, two stories high. It is equipped throughout with wood-working tools made by the Berlin Machine Works, Beloit, Wis., and is a model in every respect. The ground floor is given to flooring machines, moulders, lumber trimming devices, a six inch re-saw and a sixty inch double drum sander, the latter machine being the first of its kind in the province, and with it the company will sand-finish their flooring, ceiling and such inside finish as can be sanded. This will be a boon to builders and contractors, as it will do away with the necessity for the expensive and laborious work of hand dressing and sand papering of interior finish.

On the upper floor of the planing mill, which is on a level with the sawing floor of the saw mill, the green lumber planers are placed, including the heavy, four-sided timber planer, and with a minimum of handling, heavy timbers or other lumber that is dressed without being kiln dried are planed and passed out on the elevated tramway to the railway car or pile. Close by the planing mill, the lumber storage sheds are situated. These are 40 x 350 feet, and on either side of this building are railway sidings, so that lumber can be passed on from the planing mill just as readily to either the railway car or storage shed as may be required.

The shingle mill is an entirely separate plant and occupies a building about 200 feet west of the saw mill, and is a good sized industry in it-

PACIFIC COAST LUMBER COMPANY, VANCOUVER—SHINGLE MILL.

PACIFIC COAST LUMBER COMPANY, VANCOUVER—PLANING MILL.

self. In the log end of the mill are a heavy log haul-up rig, a powerful drag saw, built to special order by the Albion Iron Works, Vancouver, a power bolter, two knee bolters, a shingle bolt conveyor and cut-off rig. Either logs or shingle bolts are used. From this end the blocks are conveyed upstairs to the shingle machines, which were made by the Schaake Machine Works, of New Westminster. From these machines the finished shingles drop into bins, where they are sorted as to grades and bunched by a carefully trained corps of packers. The bunches are then placed on the kiln cars, which pass close alongside the packing room the full length of the mill, and with loads of 100,000 shingles on each, these cars are passed down a slightly inclined track and into the dry kiln ; when sufficiently dry, again passed along by gravity to the railway car for shipment, or unloaded in a large storehouse capable of holding about fifteen million shingles.

More than ordinary care has been given to the boiler house, which is 52 x 80 feet, situated midway between the saw and shingle mills,

PACIFIC COAST LUMBER COMPANY, VANCOUVER—DRY KILN.

with a clear space of 60 feet on each side. This building is composed of as non combustible material as possible, the sides and roof being covered with heavy corrugated iron and the floor being a heavy bed of concrete, while underneath the whole of the boilers a complete circulation of air is provided by means of rows of six-inch drain tile, set in concrete. A battery of eight boilers has been installed, each being 16 feet long and 66 inches in diameter.

The saw mill is driven by a pair of 24 x 30 vertical engines, the planing mill by a pair of 14 x 20 horizontal engines, and the shingle mill by a 20 x 24 vertical engine, all being set up on concrete pier foundations. For the purpose of lighting the whole plant, a 750-light direct current dynamo, made by the Canadian General Electric Company, has been installed. This machine is driven by a 12 x 12 Robb engine, and both arc and incandescent lights are used.

The Standard Dry Kiln Company furnished the equipments for the dry kilns. There are six rooms in all, with space provided for addition of more should requirements demand enlarging. In the construction of the dry kiln buildings the greatest care has been exercised to make them as nearly non-combustible as possible. The walls and ceiling are lined with a plaster composed of cement, asbestos, lime and sand, the roof being covered with felt and gravel. Live steam pipes are carried into each room for fire extinguishing purposes, and all steam pipes have been well protected from wood contact.

In the way of fire-fighting appliances the company has installed a six-inch water main, running through the centre of the property, from which a number of four-inch branches are taken, these entering into each of the buildings. Hydrants and hose houses are placed at convenient locations, with an abundant supply of hose and hose reels. A fire brigade will be formed among the employees and regular fire drills held in order to enable each man to understand what duty will be required of him in case of emergency.

The offices of the company are situated on the north-east corner of the property and face on Georgia street. The exterior presents a neat and tasty appearance, while the interior is conveniently arranged and is panelled with cedar and fir, natural finish. The building certainly is a credit to the locality.

Taken as a whole, the plant gives evidence of most careful planning and foresight, and it is bound to be an important factor in both rail and cargo trade. Labor-saving appliances are employed wherever possible; no unnecessary work is needed in the manufacture of the various products; from start to finish it is a straight progressive system. To the uninitiated everything looks natural and just as it should be, and the general completeness suggests that when this plant cannot make money for its owners, it will be a blue time for the lumber trade of that province.

While Canadian machinery and supplies have naturally been given the preference in the equipment of the plant, every part of the machinery has been carefully selected and the best and most modern that the world produces has been chosen. To keep the plant steadily employed ten hours per day, about fifty million feet of fir and cedar logs will be required annually.

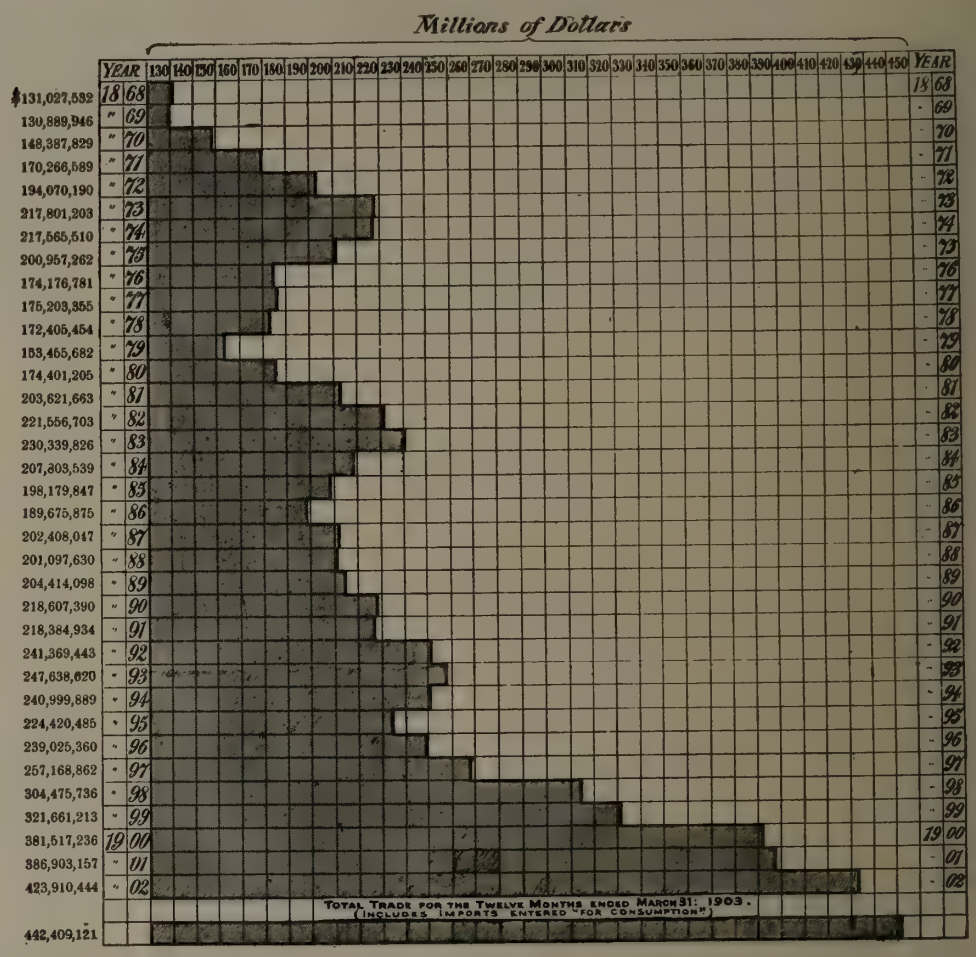
The company is represented in Manitoba and the Territories by Mr. H. T. Burntrager, of Winnipeg, Man., and in Ontario by Mr. W. J. Lovering, of Coldwater, Ont.

THE COST OF RETAILING LUMBER.

For the purpose of getting an expression of opinion on a subject of interest to the retail trade, I recently propounded this question to a number of retail yard men: "What is the average cost of handling lumber in a retail yard?" The auditor of one of the line yard companies was the first to respond. "With the exception of the line yard companies I find very few retailers who have any knowledge of the actual expense of handling a car load of lumber, nor are they in a position to tell what is the actual expense per thousand feet on the lumber they handle during the year. Where they have no teams o their own many dealers make contracts with some concern to unload, haul and deliver the lumber into their yard and accordingly they can tell what this item amounts to. Others who attempt to do the work themselves often arrive at a wrong conclusion. One dealer actually told me that he could handle his lumber for twenty-five cents a thousand. After pinning him down, however, I made up my mind that he referred merely to the cost of loading the lumber from the car onto the wagon and delivering it to his shed. He remarked that the piling was done by his yard man at odd times and really did not cost him anything. Our experience in various yards demonstrates very thoroughly that there is no way of determining the actual cost per thousand feet of handling lumber. It depends entirely upon circumstances and the location of the yard. Unless the utmost care is taken and a perfect system inaugurated, many items of expenses are incurred throughout the year which do not appear on any of the books kept by a retail lumberman. This keeps the dealer ignorant as to what his total expenses are until he takes his inventory at the end of the year, and then he finds to his sorrow that his profits have been materially cut down by these miscellaneous expenses. I have known cases where the total expense of handling and selling lumber in a yard footed up to $3 a thousand. This, however, included a reasonable compensation for the owner, insurance, taxes and interest on investment. At one or two points where we operate I do not believe that the total expense is over $1.50 a thousand, while at other points it exceeds $2.25. Taking the retail yards as a whole, I do not believe that they can possibly carry on business for less than $25 a car or about $1.75 a thousand.—Mississippi Valley Lumberman.

TOTAL TRADE OF THE DOMINION OF CANADA

FOR THE FISCAL YEARS ENDED JUNE 30TH, 1868 TO 1902.



Thomas A. Malcolm, of the firm of Malcolm & Ross, contractors for the construction of the Restigouche and Western Railway from Campbellton to St. Leonards, N.B., says the railway will open up a rich timber region. It is estimated that on Crown lands within twenty miles on either side there are 2,000,000 feet, and on New Brunswick railway lands nearly 3,000,000 feet, of which 60 per cent. is spruce and the balance cedar.

MR. WILLIAMPOWER, M. P.

(By Byron Nicholson.)

A feature of Canadian life, of which we may all well be proud, is that the highest positions in the land are open to all, without exception, who have the ambition to aim at them, the ability to fill them, and the perseverance in seeking after them which ensures success. Indeed, the second of these qualifications is sometimes all that is necessary—for now and then the office seeks the man rather than the man the office. At any rate, whilst Canada gave to royalty the honor which is its due, and unfeignedly respects true aristocracy, she allows no adventitious circumstance of birth or fortune to be a bar to the progress of her deserving sons. Of this the career of the present representative at Ottawa of the Western Division of "the Ancient Capital" is a notable example.

Mr. Powers was born in 1849 at Columbia de Sillery, a suburb of Quebec. He received his primary education at the parochial school of his native parish, and afterwards took a course at the Quebec Commercial School. When but a lad he left this institution to enter

MR. WILLIAM POWER, M. P., Quebec.

the employment of Messrs. W. & J. Sharples, the well-known lumber merchants, and was given a situation in their office at Sillery. Here he displayed such business ability that at the early age of seventeen he was given a much more important position in the company's offices in the city, and, as he afterwards became a partner in the business, he has been identified with the timber trade of the port of Quebec for nearly forty years. Besides, he has a practical knowledge of the actual work of lumbering, having spent several winters in the pine forests of Michigan and of Western Canada, supervising the work there carried on by the company's employees.

Quiet and unassuming though he has been, yet it would hardly be expected that a man who had shown so many excellent business qualities, and who, besides, had given many proofs of his generous and charitable disposition, would be allowed to remain altogether in the comparatively quiet sphere of a business life, and so, not only has he been for many years a member of the parish Municipal Council of Sillery, but on the death of Hon. R. R. Dobell, M. P. for the district of Quebec West, Mr. Power was elected as his successor—and that, too, by acclamation. Moreover, the esteem and popularity thus implied becomes still greater when it is remembered that the election took place during the candidate's absence in England.

He has already adapted himself to parliamentary life very happily, for he is not one of those who occupy the time of the House by making long or academical speeches, but (in accordance with the spirit of the age) deals with questions of public interest in a thoroughly practical manner. In this way, rather than a debate, is his presence felt at Ottawa—though, when he does speak, he speaks with such clearness, deliberation, and force that no one who hears him can possibly misunderstand his meaning, or fail to be influenced by his arguments.

SETTLEMENT OF CROWN LANDS.

HOUSE OF COMMONS, OTTAWA, May 2, 1903.

Editor CANADA LUMBERMAN :

DEAR SIR,—I take the liberty of bringing before your readers a few ideas I have held for some time. I shall be pleased to find that some improvements may be made to the present laws now in force regarding the settlement of the Crown lands of the Province of Ontario. I believe the rule of the provinces of Canada is to lay great stress upon the matter of free homesteads or cheap homesteads, and Ontario has not been behind in its offerings of large privileges in this way.

For the especial benefit of the settler, all of the timber, other than pine and spruce, has been reserved for the settler subject to limitations regarding settlement duties.

The principal enactments of importance to the settler are: That he must live upon his land a certain number of years, do certain improvements under a number of conditions, and when, on the part of the settler, these conditions have been fulfilled he becomes owner of the grant. This all sounds very fair and generous and I may even go so far as to term it paternal. Right here is where I have considered the fabric weak and inefficient for the purpose which the liberality of the grant is intended to serve. Presuming that settlement and development of the vacant lands of Ontario is the desired object of the province, the matter may reasonably be considered from the standpoint of the success of the present laws in achieving that object.

So far, after very many years of experience with the present laws, settlement has been extremely slow in the Ontario wild lands where the timber is heavy. For the purpose of my statements I will assume that a colony of, say, ten settlers, take up hardwood timbered lands, and ten settlers at any one point is fully above the average settlements in embryo. In moving upon their lots the question of existence is a matter of importance if they have little money or means of subsistence, and people of means as a rule do not go into bush lots these days. They are confronted with the regulations of the Crown Lands Department at once, when a clearing is begun, because there is no market for their timber near by, and as they are on hardwood lots their timber will not float. For the purposes of the first clearing, the timber, after cutting, is burnt, and without a market to buy their timber the process is repeated year after year. Just at this stage in the history of many such new settlements is where a difficulty comes in. Without capital to live upon and with very limited means to start upon, with but a very limited clearing the first or second year to produce means of subsistence, very many of the settlers first going into a new district are obliged to abandon their lots and go out to work in employments which will enable them to live, losing their time and what little savings they may have started with, and leaving their holdings to be taken up by others who may start upon their wrecked hopes and abandoned clearings.

I will not pursue this thought further, as it is so well known, but will suggest, roughly, a remedy: As the greatest obstacle the settler has to contend against is the timber upon his lot, which he cannot sell nor give away, but which must be removed before he can live upon his land, a market for this timber should be sought for first, and turn to value what is now condemned to be burnt after time and labor has been wasted upon doing so, to the injury of both the would-be settler and the country at large as well as in particular.

In the case of a township surveyed into concessions running say east and west, reserve say the south half of one concession and the north half of the adjoining one, and open to hardwood mill men these half concessions for the sale of the timber upon them, say at stumpage values, and if advisable, divide each township into two, three or four such berths, so as to not allow too large a territory to be tied up or held inactive by mill owners. Hardwood mills are necessarily small and 9, 12, or 18 square miles of hardwoods in a well wooded section will supply all the timber such mills can cut for years. The mills will go in concurrently with, or in advance of the settlers, will be an immediate market for the timber upon the other half of the lots reserved for the settlers, will take off the timber, allowing settlers easier clearing upon the sections the timber has been sold from, and then the paternal disposition of the government may show itself in two ways—either hand to the settler the money received by the government as dues for the timber so sold or use these moneys to build roads, bridges, etc., through the section or township. A mill must have employees (who will largely become settlers), a community will bring a store and post office and artisans, and the growth of the district will soon develop a village.

I feel that by this method what is now bound to be destroyed will be utilized, the mill owner will be an active fire ranger, the co-operative method will assure better and quicker results in settling the country, no loss can come to any of the interested parties, and the government will save the country generally and the district particularly what would and is to-day and has been in the past destroyed by fire.

With these simple outlines I will reserve further words for more definite details if necessary.

Yours truly,

J. T. SCHELL.

CARBOLINEUM TREATMENT OF TIMBER.

The Dominion Paving and Contracting Company, of Toronto, is erecting a large building and plant in Vancouver, B. C., for the treatment of piles, railway ties, paving blocks, etc., with carbolineum. The works, which are now in course of erection, are situated on Coal Harbor, at the junction of Georgia and Denman streets. The property has a water frontage of 330 feet, and occupies a piece of ground several acres in extent. The work the company purposes carrying on is not the manufacture of carbolineum, but the treatment of woods with this composition, wharf piles, railway ties, street paving blocks, etc., and it is hoped that the already large domestic and foreign trade in some of the manufactured products of the British Columbia forests may be increased as a result of the establishment of this industry. Carbolineum is already extensively used on the coast for the preservation of timber. The process considerably lengthens the life of a pile, railway tie or other timber. Unlike creosoting and some other methods of treatment, it does not destroy the firmness or exhaust the wood by extracting or dissolving the soluble albuminous gums, resin, etc. The carbolineum treatment, it is claimed, coagulates all these gums into insolubility and thus prevents the tendency to rot. The treatment also prevents expansion and contraction under varying temperature and moisture. It so impregnates the wood that it becomes entirely uninhabitable to worms or the lower orders of animal life which are so destructive to woods, animalculae, fungi and other forms of lower life being destroyed or kept at a distance by it. Mice and rats and even horses refuse to gnaw wood so treated.

W. L. Martin, lumber merchant, Watella, N.W.T., has sold out to K. Nixon.

A. Haslam, of Nanaimo, B. C., recently put in a log hauling chain containing 774 links, each 6 inches long, made of 1½ inch iron. It was supplied by the Nanaimo Steam Carriage Works and will be used for hauling logs from the pond into the mill.

One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

FACTS ABOUT SHINGLES.

When about ten years ago the first vigorous steps were taken to introduce the red cedar shingle of the Pacific Coast into the eastern markets, there was much speculation as to the effect which the success of such a movement might have upon the white pine variety. At that time the advantage in the matter of price was with the red cedar shingle. It is only fair to the coast manufacturers to state that the reception which their product received was favorable, while with equal truth it may be said that the white pine shingle has lost little, if any, of its popularity. Natural conditions have brought about a very different situation than that which prevailed ten years ago.

The time chosen by the red cedar manufactures to exploit the eastern markets was most opportune. Many white pine lumbermen had been nursing a conviction that timber was becoming too valuable to be worked into shingles, even at the higher prices then prevailing. As years went by, one manufacturer after another either ceased to produce shingles entirely or reduced his output, using as shingle timber only that portion of the tree which could not be used commercially in any other way. Thus as the production of white pine shingles was reduced, the importation from the west was increased, an opportunity which the red cedar manufacturers were not slow to recognize.

Within ten years the price of red cedars has advanced, while that of white pine has declined. The rising market for white pine lumber has not been reflected in the price of shingles, and little encouragement is offered for their production. On account of the lessened supply many eastern wholesale houses are abandoning entirely the handling of white pine shingles and are devoting their attention largely to the Pacific Coast product, which is fast monopolizing not only the Ontario trade, but that of the Eastern States also. In the latter territory the white cedar shingle of eastern Quebec and New Brunswick is an element of competition to which consideration must be given. Being slightly cheaper than the western product, it finds many customers, particularly as the standard shingle now manufactured is vastly superior to that of a few years ago. Having a great advantage in freight rates, the manufacturers of the white cedar should be able to pretty well hold the market in near-by territory.

It will be seen that the producers of white pine shingles have gradually abandoned the market, not as the result of competition from other varieties, but because better returns could be obtained by converting their timber into lumber.

THE SELLING OF TIMBER.

It would be unwise to claim that the persons who are in charge of the administration of the Crown lands of the different provinces of the Dominion have not a fair knowledge of the value of timber. They are, as a rule, shrewd men, capable of framing such laws and regulations as will best meet the present, as well as the prospective needs of the country, as far as it is possible to do so. It is not easy to account, therefore, for certain agreements which have been made by more than one Government, and which would seem to have given away valuable timber lands for a "mess of pottage." Only last month the announcement was made by the British Columbia Government that nearly all the timber lands on Vancouver Island and the coast of that province not previously taken up had been reserved for really unknown parties, under the name of the Island Power Company. At first it was difficult to grasp the significance of the announcement, which seems a serious blow to the lumber industry. The situation was not improved by the later report that the company securing the concession had sold out to an English syndicate.

Notwithstanding claims to the contrary, it is quite certain that our timber lands are not always disposed of to the best advantage. More than one pulp company have secured a greater area than they were entitled to, and a few lumbermen have profited by the generosity of governments. The favored few will have no words of condemnation, but to the majority an injustice is done. As a public asset the timber should be sold to the highest bidder, and an equal opportunity given to all. It is a question whether the disposal of pulp wood lands by auction, although presenting some disadvantages, would not after all be found to be the most equitable plan.

A policy which seems to have been adopted by the Quebec Government is to give but scant publicity to proposed public sales of timber limits. Although one of such sales is to take place about the middle of this month, there was not, so far as can be learned, until a few days ago, any public announcement of the fact outside of the city of Quebec. It is difficult to imagine how the Government hopes to thus secure that degree of competition which would result in obtaining the best possible prices for the timber. If that result is not desired, the course followed can be understood.

Since the above was written, a modest looking notice has been published in the British Columbia Gazette cancelling the reservation of timber on behalf of the Island Power Company, on the ground that the reserve was six hundred square miles more than it was intended to have been.

EDITORIAL NOTES.

At time of writing forest fires are raging on all sides. Already the damage to standing timber and to a number of settlements has been heavy, but it is feared that the worst is not yet past. Undoubtedly the extreme drouth which has prevailed throughout almost the entire Dominion is the chief cause for the large number of fires. As the property of many individuals, particularly in Quebec and New Brunswick, has suffered, it is probable that it may lead to a public awakening to the necessity of more adequately protecting the forests from fire. The public has in the past been too careless about the setting of fires, and while commendable measures have been taken by the different governments to prevent their origin and spread, these measures have in a large degree been frustrated by the indifference and apathy of the public towards forest protection. When their personal effects become endangered, however, a change of disposition may be looked for.

The manufacturer is being severely condemned for the prevailing high prices of lumber, which, in the opinion of the layman, are largely the result of a desire to increase profits at the expense of the consumer. If due consideration were given to the conditions affecting the price of lumber, however, it would be found that the manufacturer is deserving of no such censure. Apart from the added expense of timber, camp supplies, machinery, etc., the expenditure in wages alone to produce one thousand feet of lumber has almost doubled within six years. This is shown by the following table, compiled by the secretary of the Mississippi Valley Lumbermen's Association. The figures given are the monthly wages paid the employees of the camps in Minnesota and Wisconsin:

	1896	1897	1898	1899	1900	1901
Teamsters	$16.00	$16.00	$20.00	$24.00	$26.00	$30.00
Swampers	13.00	16.00	20.00	24.00	25 00	30.00
Choppers	14.00	15.00	20 00	24.00	26.00	30.00
Loaders	20.00	24.00	26.00	30 00	32.00	35.00
Sawyers	14.00	18.00	20.00	24.00	26.00	30.00
Graders	13.00	16.00	18.00	20.00	24.00	30.00
Chain tenders	16.00	16.00	18.00	20.00	24.00	30.00
Blacksmiths	35.00	40 00	45.00	50.00	55.00	60.00
Cooks	40.00	40.00	45.00	50.00	55.00	65.00

The conditions in Minnesota and Wisconsin are much the same as those which exist in the white pine districts of Ontario.

The Canadian buyer of lumber is more generously dealt with in respect to terms of sale than is his confrere in the United States. As recently pointed out in these columns the terms allowed are two per cent. off for payment within fifteen days, or the face value of the invoice within three months. In the Eastern States 1½ per cent. discount is allowed for settlement within fifteen days, one per cent. within one month, and the invoice must be met in full within sixty days. These terms seem to

have given general satisfaction, as the Mississippi Valley Lumbermen's Association and the Wisconsin Valley Association have recently adopted them, and the Southern Lumber Manufacturers' Association and the Northwestern Hemlock Manufacturers' Association are considering their adoption. This will make their adoption practically unanimous for the territory east of the Mississippi Valley.

CUTTING AND FLOATING OAK.

Our contemporary, the Southern Lumberman, publishes the views of several persons on the subject of whether or not it will damage oak timber to cut it in the spring or early summer, peel the bark off and let the logs lie out until the fall or winter, before sawing them up. While there is some difference of opinion expressed, the replies are in the main unfavorable to the assumption that the logs can be carried over summer profitably. Discoloration and worms are given as possible sources of damage. One correspondent states that the removal of the bark frequently prevents worms getting into the logs, although it would scarcely pay to remove the bark. The policy of another firm is to cut the timber in the fall and scalp it, refraining from putting it in the water until it has been cut and on the bank sixty days. It is claimed that 99 per cent. of oak will float after being prepared in this way. If it is cut in the winter and hauled in green with the bark on, about one-half or two-thirds of it will sink. Timber cut in June or July and peeled will float, but is likely to check.

THE AUSTRALIAN LUMBER TRADE.

In his last report to the Department of Trade and Commerce, Mr. J. S. Larke, Canadian Commissioner at Sydney, New South Wales, says of timber :

"Notwithstanding the drouth building operations have been brisk and the demand for timber good. British Columbia fir, known here as 'Oregon,' is now $14 at the mill, instead of $7.50 at which it was once sold. California redwood, sold largely for doors, sashes and inside work, has advanced nearly 33⅓ per cent. in a year and is quoted at $24 at the mill. Every now and then it has been proposed to introduce cedar and some of the cheaper timbers of British Columbia into this market, but no determined effort has been made. The market in timbers, as well as in other lines, is conservative and no demand for a new timber can be created in a day. The high prices now ruling afford an opportunity to introduce the Canadian that may not occur again for a decade.

"One of the timbers practically unknown here is the hemlock, and in connection with the cutting of that timber there would be a market for the extract of the bark. There is a prejudice against hemlock-tanned leather mainly on account of its colour and some poor samples of that tannage that have been offered on this market. Wattle, which is the Australian bark used for tannage, has gone up in price and as a result there is a demand for a cheaper tanning material. This demand is likely to continue for some time, as the drouth has killed a good many wattle trees and stopped the growth of more."

VIEWS AND INTERVIEWS

Few persons know more of the early history of lumbering in Ontario than Mr. Thomas Shortiss, an old Torontonian. He relates that fifty years ago the township of King was considered the lumber centre of the Province. In 1853 Mr. Shortiss built a saw mill just above Barrie, on the Northern Railway. It had a capacity of 75,000 feet per 24 hours and in those days was considered a very large mill. He was the first person to ship lumber from Ontario to Chicago. He is now not actively engaged in the lumber business, although interested in timber limits. It is the opinion of Mr. Shortiss that very few people have become rich by sawmilling operations, but that most of the wealth now represented by lumbermen is the result of investment in timber limits.

***

Would it not be possible to increase our exports of turned hardwood stock to Great Britain if we more nearly met the requirements of that market? This is a matter that is worthy of consideration. One who is largely interested in this trade states, for instance, that the English buyer is very particular about the design of broom handles, for which there is a large market there. They require a handle grooved about two inches from the top and with a bead running around. The ordinary Canadian broom handle would be called a mop handle in England. Great care should also be taken in the shipment of such stock. We know of an entire consignment of broom handles which was rejected on account of the bundles having been tied with a tar band, causing a mark which could not be removed.

***

It is impossible to manufacture basswood in certain seasons without its being seriously discolored with sap stain. For this reason much of this wood is manufactured in the winter and even then a large per cent. of it blues. Soft elm occasionally has this defect, but it is very seldom found in oak or maple. Some of the sap in birch decays, but it leaves white spots and very soon rots. Hemlock has very little sap and so escapes the defect. Doubtless climatic conditions have much to do in bringing out this discoloration in wood. The other day a manufacturer in speaking of the subject said: "Whenever a rain storm occurs followed by hot, sultry weather, lumber that is freshly piled is almost certain to become badly stained. I have known cases where lumber has been taken from the saw, loaded in the hold of a vessel and 24 hours afterwards had quite a mold and mildew covering the surface. This was doubtless caused by the stifling, hot atmosphere down in the bottom of the vessel. We find that one board seems to discolor another, but generally it is not seriously injured except where it comes in contact in cross piling. Many of the manufactures have adopted the practice of using hemlock on this account."

***

The Toronto Globe, in noting the appointment as Senator of W. C. Edwards, the Ottawa lumbeman, says that while operating far up the Gatineau river, he tells this story of a shantyman who had spent a couple of seasons working for him in the bush, and was coming out again shortly after the death of Queen Victoria.

At Maniwaki the shantyman made his first stop on the way down, and in a chat with the hotelkeeper asked what was the news since he had gone in the woods.

"Oh, there's nothing much new. I s'pose you heard up there that the Queen was dead?"

"No, you don't tole me de Queen was dead! I'm sorry to hear dat: I'm sorry. She was a good woman, de Queen, an' a good Queen, too. Well, we'll all die some tam, even de Queen."

After a short respectful paus, he asked: "An' who's got de job now? Who's de head now?"

"Oh Edward's the King now. It's King Edward for the last three months."

"Edwards de King! Well, well; you don't tole me Edwards de King! He's a beeg man in de lumber business, but I never expec' to hear of him be de King. What a pull dat man Edwards mus' have wit' Laurier!"

***

Hemlock is now having its innings. The price of white pine has reached the point where substitutes are sought after, and for many purposes hemlock fills the bill. The mills in the Parry Sound district are this season sawing a very large quantity of hemlock logs, largely into dimension timber. Hemlock lath is also growing in favor, although the price seems to be too close to that of pine to warrant its use to any large extent. Concerning the relative merits of white pine and hemlock lath the Mississippi Valley Lumberman says: "White pine is particularly well adapted for lath for the reason that it is not inclined to warp and does not shrink and swell abnormally. In addition to these well known merits there is a well grounded preference in the minds of practically all builders and consumers favorable to white pine lath. The numerous substitutes which have been put on the market from time to time have accordingly had to be sold at a substantial reduction from the white pine prices." The question has been asked whether there is any money in manufacturing hemlock lath from standing timber. It is extremely doubtful that this could be done to advantage, as it is now a recognized policy to manufacture lath only from that portion of the tree which would otherwise be wasted.

DOMINION TIMBER LICENSES.

The regulations regarding timber licenses in Manitoba, the Northwest and the railway belt of British Columbia have been amended so as to make it clear that the licensee complying with the conditions is entitled to a yearly renewal while merchantable timber remains upon the area.

The Virden Lumber & Hardware Company, with offices at Brandon and Virden, Man., have changed their name to the Manitoba Hardware & Lumber Company.

During the eight months ending with February the United States imported nearly fifty per cent. more unmanufactured wood than during the corresponding eight months of the previous year. As represented in dollars the figures were $10,232,745 and $15,206,827.

NEW COMBINATION LATH MILL AND BOLTER

Although there have been many combination lath mills and bolters put on the market the last few years, the exacting conditions of the lath industry soon relegated many of them to a place in the background. It is claimed that not until the advent of the machine which is the subject of this sketch, has any manufacturer been successful in designing a machine which was strong and cheap enough to fill the conditions. This machine, however, meets all the requirements and has proven to be a favorite with the lath manufacturer from the start.

The machine consists of a one-saw bolter and a three-saw lath mill mounted on one table with strong iron legs.

NEW COMBINATION LATH MILL AND BOLTER.

The bolter saw, which is 22 inches in diameter, has a power feed roll, adjustable guide, and a splitter behind the saw.

The lath mill has 12 inch saws, with feed and adjustable pressure rollers both in front and behind. There s a shield over the saws to prevent accidents. The arbor, roll shafts and rolls are all made of the best machinery steel, while the rest of the machine is built of the same quality of iron that has helped to make the "Hill' machinery famous.

The table is a large well proportioned casting so de signed that nothing short of dynamite will break it, while the legs and other parts are strong and well proportioned. A countershaft, not shown in the illustration, completes the machine.

The machine is built on generously strong lines, and like all other "Hill" machines is built to wear. It is 6 feet 10 inches long over all, 3 feet wide, 3 feet 6 inches high, and when boxed occupies about 72 cubic feet; weight complete with countershaft, 1,050 lbs.

Those interested in the cheap manufacture of lath will do well to write for the pamphlet "How to Make Good Lath," in which this and other interesting machines are fully illustrated, addressing Wm.E. Hill & Co.,415 N. Rose street, Kalamazoo,Mich.,and mentioning this paper.

TRADE INQUIRIES.

The following inquiries concerning trade prospects have been received at the office of the Canadian Manufacturers' Association, Toronto. The names of inquirers may be learned by communicating with the publishers of this journal.

BOX SHOOKS—A firm of fruit shippers in Ealing, Eng., require a large quantity of box shooks cut to dimensions and wish to hear from Canadian manufacturers who can fill orders.

A wholesale seed firm in Surrey, Eng., requiring large supplies of wooden boxes, cut to specified sizes, have asked to be placed in touch with Canadian shippers of box shooks.

CASEIN—The addresses of casein manufacturers in Canada are asked for by a firm in Scotland.

CHAIR MATERIAL—A London firm of manufacturers' agents possessing a long experience and large con' nection would like to represent a first-class Canadian producer of chair materials.

DOORS AND LUMBER—A London timber merchant desires names of Canadian manufacturers who can supp'y doors,shelving,carpenters' clear pine,poplar,etc.

DOORS AND SASH—A correspondent at King's Lynn, England,desires to purchase the above for cash against shipping documents. He asks tor quotations delivered at London or Liverpool.

DOORS,WINDOWS AND SASH—A merchant in Antigua, B. W. I., desires to purchase the above. He asks for quotations f. o. b. St. John and Halifax. Canadian references are sent and payment will be made by sight draft on New York.

HANDLES—BROOM—(1) A Bristol house is prepared to contract for supplies of broom handles and invites corrsepondence from Canadian producers.

(2) A correspondent at King's Lynn, England, desires to purchase the above for cash against shipping documents. He asks for quotations delivered at London or Liverpool.

HANDLES, SPADE AND SHOVEL—An enquiry has been received from Berwick-on-Tweed for names of Canadian lumber houses in a position to export 32-inch spade or shovel box or D handles (English pattern); also shovel stems 32, 29 and 34 x 1½ inch diameter.

LUMBER—A London merchant desires to purchase carpenter's clear pine, poplar and hickory.

PIANO KEY BOARDS—A London manufacturers' agent asks to be placed in touch with Canadian manufacturers of basswood piano key boards.

SKEWERS—A well known firm in Christiana, Norway, desires to purchase the above and asks for samples and quotations f.o.b. New York.

TIMBER—A Wolverhampton commission agent desires to procure cheap timber for machine chopping and bundling firewood.

WOODEN WARE—A Glasgow firm of manufacturing agents who already represent Canadian manufacturers desires to correspond with shippers of the above with a view to representing them in Great Britain.

C. W. Milestone has established a lumber yard at Moose Jaw, N. W. T.

The St. Anthony Lumber Company, of Whitney, Ont., are building a new steam hoist at Sproule Lake for the loading of logs.

One of the boilers in Petit Bros. saw mill near Comber, Ont., exploded recently, seriously injuring one of the employees.

Hunting & Lee are building a shingle mill on the south side of False Creek at Vancouver, B. C. The mill will be equipped with five shingle machines, which will be supplied by N. Thompson & Company, of Vancouver.

The Surveyor General of New Brunswick proposes to make some alterations in the fees of log scalers. Heretofore the scalers have been paid five cents a thousand on all the logs scaled. It is proposed to pay the scalers a stated salary and to make them game, fish and fire wardens all the year round.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING. MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—SOFT MAPLE, 2, 3 and 4" COMMON and better, or firsts and seconds. Box 90, care of CANADA LUMBERMAN.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

WANTED

TWIN ENGINE STEAM FEED IN GOOD order, unbroken; state diameters, cylinders, make, when can ship. Apply Box 66, care CANADA LUMBERMAN.

MOST ADVANTAGEOUS MILL SITE

FOR A LARGE STEAM SAW-MILL ON sheltered bay near Desbarats Station, Canadian Pacific Railway, 28 miles east of Sault Ste. Marie, Ont. Deep water and rail. Large local supply of pine and hardwood. Write, L.O. ARMSTRONG, Canadian Pacific Railway, Montreal.

WANTED

CLEAR CEDAR LUMBER

in lengths from 12 to 18 feet long, cut plump inch, 6 inches and up in width. THE CANADIAN CANOE CO., LIMITED, BOX 107, Peterboro.

HARDWOOD LUMBER WANTED

3-inch Common and Better Soft Elm.
2-inch 1's and 2's Soft Elm.
Also all grades Ash, Basswood, Birch and Elm. Send us list of any hardwood lumber you have for sale.

BRIGGS & COOPER CO., LIMITED,
Saginaw, Mich.

FOR SALE — A QUANTITY OF CEDAR Squares. P. O. Box 213, Almonte, Ont.

WANTED—TWIN ENGINE FEED FOR carriage; state make, size of cylinder, condition, when could ship. B.F. WARD, Brantford.

FOR SALE—ONTARIO CEDAR SHINGLES XXX, XX, X; White Pine Shingles XXX, XX, X; Cedar Squares. Address Box 37, care CANADA LUMBERMAN.

FOR SALE

VENEERS—SINGLE PLY OR GLUED UP stock. INTERNATIONAL LUMBER CO., LIMITED, Sault Ste. Marie, Ontario, Canada.

FOR SALE

WE CAN SUPPLY FOR PROMPT SHIPMENT 75,000 feet Rock Elm timbers from 12 to 34 feet long, cut to order. For particulars, etc., write to KEENAN BROS., Owen Sound.

WANTED — TO BUY (STUMPAGE) ON Georgian Bay within five miles of Railroad or Lake, five million Hemlock and one to two million Pine, Spruce, Cedar, etc. Box B, CANADA LUMBERMAN.

HICKORY CUTTINGS.

WANTED—A QUANTITY OF HICKORY Pieces, mostly small sizes. Particulars of Scantling will be furnished on application. Apply Box 8, CANADA LUMBERMAN.

WANTED.

IN CAR LOTS, INCH CULL LUMBER either Hardwood or Pine, cut to 22 inches long. State quantity and price. Also Basswood Lumber, inch, millrun. Box T, CANADA LUMBERMAN.

WANTED—WE ARE ALWAYS OPEN TO contract for all kinds of hardwood lumber. Please state price F. O. B. your nearest station, quantity and quality of the different kinds you will have to sell during 1903. We also require a large amount of Dimension stuff, particulars of which will be furnished, on application, by the KNECHTEL FURNITURE CO., of Hanover, Ont.

LIMIT FOR SALE

A TOWNSHIP WITH GOOD RED AND White Pine. About 50,000 Logs now cut and a portion hauled. Mill on the ground. Best shipping facilities. Location on C. P. R. main line. PINE LUMBER COMPANY, Cartier, Ont.

Hear You N. B. Cedar Shingle Fellows !!

WE WISH TO LOCATE A GOOD MANUFACTURER of New Brunswick Cedar Shingles who wishes to contract his output at good prices. A connection that could be maintained several seasons. Address "SHINGLES", care CANADA LUMBERMAN, Toronto.

FOR SALE.

One 20" x 24" Waterous engine, 8 ft. driving wheel, 26" face. 11 ft. x 4 ft. Stillwell & Bierce Heater, feed pipe and connections to heater complete.
One 10" x 18" Engine.
One 3-k.w. 2,500 Standard Dynamo and Voltmeter, wiring and 50 lamps (complete.)
One pair twin engines, 10x16.
One No.2 Carriage and Saw Frame, 78 ft. track, and two 60" Saws.
One set Trimmers, to trim 6 to 24 ft., chains, mandrils and saws.
Also a quantity of Shafting, 2" to 4" pulley, and steam and water pipe.
One 14' x 60" Boiler; one top saw slash table.
About one mile of telephone wire, and two 'phones. For particulars, apply to BOOTH & GORDON, Azilda, Ont.

FOR SALE—DOUBLE CLAPBOARD PLANER and joiner, built by Lane Manfg. Co., in first class order, a bargain for quick turn-overs. Address: MACHINERY EXCHANGE, 22-24 Victor Square, Montreal, Quebec.

WANTED IMMEDIATELY, TEN CARLOADS of common and better 4/4 Black Ash, and two carloads of common and better 8/4 Black Ash. Cash will be paid for the same either at point of shipment or delivered at our factory at Hanover, less 2%. For particulars apply to the KNECHTEL FURNITURE COMPANY, Hanover.

Wanted--Position with Lumber Manufacturer.

BY YOUNG MAN FORMERLY CONNECTED with large Timber Brokers in London. Bookkeeping and office work. Excellent references. F. E. G., care CANADA LUMBERMAN.

WANTED—SHINGLES

WE WANT GOOD 18" WHITE PINE AND 18" Cedar, all grades, either contract mill output or single car lots. Write fully. J. G. STRAIT & SONS, Wolcott, N. Y.

FOREMAN WANTED

EXPERIENCED FOREMAN FOR A PLANing mill, capable of overseeing the work and keeping in order two matcher machines and a circular resaw. Salary to a capable, sober man, $3 per day. Address, stating fully experience, etc., "Foreman," office of CANADA LUMBERMAN, Toronto, Canada.

For Sale

Tramway Outfit

ABOUT FIVE MILES LIGHT RAILS—1 SHAY Locomotive, logging cars, etc. For particulars, apply JOHN J. GARTSHORE, 83 Front street west, Toronto.

Province of Quebec.

Department of Lands, Mines and Fisheries.

Woods and Forests.

Quebec, 9th May, 1903.

Notice is hereby given that, conformably to sections 1334, 1335 and 1336 of the consolidated statutes of the Province of Quebec, the timber limits hereafter mentioned, at their estimated area, more or less, and in their present state, will be offered for sale at public auction, in the DEPARTMENT OF LANDS, MINES AND FISHERIES, in this city, on TUESDAY, THE 16TH DAY JUNE NEXT, at ten o'clock a.m.

CONDITIONS OF SALE.

No limit will be adjudged at less than the minimum price fixed by the department.

The limits will be adjudged to the highest bidder on payment of the purchase price, in cash or by cheque accepted by a duly incorporated bank. Failing payment, they will be immediately re-offered for sale.

The annual ground rent of three dollars per mile, with fire tax, is also payable immediately.

Those timber limits, when adjudged, will be subject to the provisions of all timber regulations now in force or which may be enacted hereafter.

Plans of limits offered for sale are open for inspection in the Department of Lands, Mines and Fisheries, in this city, and at the office of the Crown lands and timber agents in the different agencies in which said limits are situated, up to the day of sale.

N. B.—No account for publication of this notice will be recognized, if such publication has not been expressly authorized by the department.

S. N. PARENT,
Minster of Lands, Mines and Fisheries.

Patent For Sale.

BAND SAW CLAPBOARD MACHINE, THE only one in the world. Carriage has automatic setting device, only 8" stroke, with turn table. Block stands vertical and cuts all clapboards radially. Will take blocks any diameter 14" to 32 x 48" long. All clapboards cut desired thickness regardless diameter block. Will cut five times faster then any circular machine. 25 per cent. saved in saw kerf. A sound block 48" long x 32" diameter will cut out $10 worth of clapboards. Large demand in New England States. Prices $45 per M pieces. Will sell entire right for Dominion. Drawings and specifications on application. A. J. BURTON, Parry Sound, Ont.

Gellibrand, Heywood & Company, timber merchants, have found it necessary to remove their offices from Cardiff to London. They are now established at 57 Gracechurch street, London, E. C., their cable address being 'Gellicht, London."

CURRENT TRADE CONDITIONS.

ONTARIO.

Opinion concering the lumber outlook is more divided than it has been for some time. The prolonged strikes have greatly restricted building operations and unsettled business in general to some extent. Local dealers are not altogether satisfied with the volume of trade, claiming that orders have fallen off for both local consumption and for export to the Eastern States. An evidence that the market is well in hand, however, is found in the fact that prices have not weakened. This can no doubt be attributed to the large proportion of the season's cut that was contracted for early in the season. Mill men are in the fortunate position of being protected in large measure from declining prices by means of early contracts. Hardwood lumber is equally as firm as pine, and by many it is reported that the buying of it is of a better character. Hemlock remains steady. There is a heavy demand for inch stock, which is selling in some cases fully one dollar higher than 2-inch. Most of the mills are asking about $12 for 10 and 12 inch boards up to 16 feet in length.

Shingles and lath are practically unchanged in price. The demand for hemlock lath is growing. Mill prices are $2.50 for No.1 and $2 for No.2.

QUEBEC AND NEW BRUNSWICK.

Prospects in lumber circles in the eastern provinces are rather discouraging. The recent drought has been the cause of several forest fires which have destroyed both timber and mills, while the water in the rivers is so low that many logs are likely to be hung up. For this reason the supply of lumber will be greatly reduced and probably inadequate to meet the demand. Scarcity of logs has already resulted in the closing down, temporarily, of several large mills at St. John. Higher prices for timber, therefore, may be anticipated. Many manufacturers have placed their entire cut under contract, and are now compelled to refuse orders. Inquiries for both lumber and shingles are increasing in number. No change is reported in the price of New Brunswick cedar shingles, although the manufacturers who practically control the market are said to be in favor of making an advance.

MANITOBA AND BRITISH COLUMBIA.

Building activity in Winnipeg shows no abatement, and throughout the entire North-West there is a good demand for lumber. Importations from the United States are increasing. This is having a slight effect upon prices, especially of shingles. The British Columbia Shingle Manufacturers' Association have decided to curtail the output by closing down the night shift at all the mills, and it is said that some of the mills will voluntarily close down entirely until the present supply is reduced. Orders for British Columbia lumber continue in fair volume and large shipments are being made to the east.

UNITED STATES.

Floods throughout the South-Western States have resulted in much damage to property and blighted lumber prospects. In the east the labor situation has not improved materially, although rumors have been current for some time that an early settlement of the New York building trades strike would be brought about. The lumber market is quiet, principally due to the conditions named above. One or two grades are said to be slightly weaker in price, but firmness characterizes the general market. There has been heavy buying of box lumber. In the Lake Superior district No. 4 and 5 boards are selling readily at $11.25 and $6 to $6.25 per thousand, with the demand in excess of the supply. Norway lumber is in the same position. It is claimed that the supply will not be sufficient to meet the requirements. Hemlock continues to show unusual strength. At Buffalo it is selling at $16 to $18, and in New Jersey State the price has been advanced to $17 to correspond with the New York quotation.

The hardwood trade continues in excellent condition and seems to have been little affected by labor troubles. Prices are very strong, and stocks are not accumulating to any extent. It is believed that there will be a very small supply with which to meet the fall and winter demand.

Shingle prices have been unsettled by the continued weakness of red cedars. These are selling thirty cents lower than at the corresponding time last year. It is unreasonable to expect that other grades will more than hold their own so long as red cedar prices continue demoralized.

GREAT BRITAIN.

An improved tone is manifest in the British timber market. The consumption is about equal to that of last year, and if the import should be light, as is now predicted, a further improvement would seem to be in order. The strike in the shipbuilding trade at Belfast has been averted for the present. Importers are adding to their stocks whenever they can obtain even a slight concession in price, and a few are even acceding to the demands of shippers. The latter are not likely, in view of the lessened production, to reduce their asking prices. The first cargoes of Canadian pine deals have arrived at Liverpool and London, largely on contract. There has been no change in the position of spruce deals. The report from Belfast that prices are somewhat lower is not confirmed by information from other points. Elm timber is showing strength. A quantity from Quebec, 28 to 39 feet in length and from 12 to 21 inches in diameter, recently brought £5 15s per load of 50 cubic feet. Ash timber, on the other hand, is very dull and almost a drug on the market, the price obtained at recent public sales being 65s per load.

STOCKS AND PRICES.

The tug "Pilot" has been chartered to tow to Vancouver, B. C., 10,000,000 feet of logs, the property of W. H. Higgins.

No. 1 white pine lath is quoted at $3.50 for delivery at Chicago by water, No. 1 mixed at $3 to $3.50, and No. 2 at $2.75.

The Grand Valley Seignory, comprising 54 miles of timber limits, situated in the Lake St. John district of Quebec, is reported to have been purchased by a syndicate for $100,000.

The steamer Pandosia is loading deals at Miramichi, N. B., for the United Kingdom. The steamer Pydna is loading at Hopewell Cape, N. B., for Dublin. The steamer Holmlea sailed from Montreal last week for Hull, England, with a cargo of deals.

Two timber berths were sold at the Crown Lands office, Fredericton, N. B., last week as follows: Three square miles on Emognops River, to Thomas W. Flett, at $151 per mile; two square miles on Bartholemew's river, to W. T. Whitehead, at $30 per mile.

Tenders are invited by the Department of Interior at Ottawa up to July 8th for a license to cut timber on Berth No. 1071, comprising 20 square miles, in the district of Saskatchewan, also for Berth No. 1072, comprising fifteen square miles, in the same district.

Dickie & McGrath, of Tusket, N. S., are now loading with lumber the barque Leviathan, 1,006 tons. The barque Dristig is due to load for Lannelly, Wales; the barque Patriarch, 1,221 tons, for Buenos Ayres; the Ciampa Emilia, for Bristol Channel, while several others are due to load later.

Under date of May 23rd Messrs. S. P. Musson, Son & Company say of the Barbadoes lumber market: "There have been no arrivals since the spruce by "Ich Dien" reported in our last. This vessel had about 40,000 feet of second quality spruce, which we sold at $16.66. There is a fair supply and no inquiry. In white pine a cargo with full proportions of second quality would, we think, meet fair prices. There have been received a small lot of Spruce Laying shingles, which were placed at $2.21."

TO HOLDERS OF BIRCH LIMITS.

Can you cut birch into Squares,&c. We can also take birch cut on the sweep with a jigger or small band saw. Large quantities required. Write in first instance to "Finance, "c/o CANADA LUMBERMAN.

THE BOSTON MARKET.

The situation in spruce lumber is still further complicated by the forest fires that are raging throughout the lumber regions of Maine and New Hampshire. Advices from Maine say that many mills are shut down. Some have been burned, while others have been obliged to send their men into the woods to fight fires. This, taken in connection with the delay to the drives on account of low water, tends to keep down the supply of lumber and in large measure counteracts the dull demand resulting from the strikes. Prices at Boston, therefore, hold steady: Ten and 12-inch dimensions, $21; nine inch and under, $19; 10 and 12-inch random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50; 5-inch and up, merchantable boards, $17; matched boards, $18.50 to $20; out spruce boards, $13 to $14; bundle furring, $17.

Hemlock lumber is quiet but steady at: Boards, 12, 14 and 16 feet stock, $15 for good eastern: Pennylvania, No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Western pine lumber is still held firm, though the demand is only fair and the supply is ample to supply the trade: Uppers, 1 to 2 in. $84 to $87; 2½ to 3 in. $92 to $97; 4-in. $96 to $100; selects, 1-in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78; 2½ to 3 in. $84; 4-in. $86; fine common, 1-in. $67; 1¼ to 1½ in. $69; 2-in. $72; 2½ to 3 in. $80; 4-in. $82; barn boards, $23 to $33; coffin boards, $28 to $32.

Hardwood lumber is in active demand, the new buildings now being finished reduiring considerable finish. Whitewood is firm and tending up, and other grades are very firm: Quartered oak, $75 to $83; plain oak, $45 to $47; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $54 to $60; sap, $43 to $48; common, $38 to $45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end dried white maple, $46; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Clapboards are steady and unchanged: Extra, $45; clear, $43; second clear, $40; extra No. 1, $30.

Shingles are steady with a good demand: Extra cedar, $3.50 to 3.55; clear, $3.00 to $3.10; second clear; $2.40 to $2.50; extra No. 1, $1.75 to $1.80; British Columbia red cedar, 16-in., five butts to 2 inches, $3.50 to $3.60; 18-inch, five butts to 2 inches, $3.75; five butts to 2¼ inches, $3.90.

Laths are firm and unchanged: 1⅝ in., $3.25 to $3.45; 1½ inch, $3.10 to $3.25.

LUGAS, STEELE & BRISTOL, HAMILTON, ONT.

AN INSPECTION BUREAU.

The cargo branch of the Pacific Coast Lumber Manufacturers' Association have organized the Pacific Coast Lumber Inspection Bureau, with one chief and three deputy chief inspectors. The manufacturers interested in the movement include the Victoria Lumber & Manufacturing Company, of Chemainus, B. C., and the British Columbia Mills, Timber & Trading Company, of Vancouver. The result of the first month's work of the Bureau was very satisfactory. It is estimated that fully 95 per cent. of the coast-wise and foreign shipments from the Pacific North-West will pass under the supervision of the Bureau. It is claimed that for the past ten years the lumber manufacturers have been compelled to stand for reclamations in the markets of the world, and had absolutely no recourse. The Bureau's inspectors now reject defective lumber at the mill, thus saving the cargo trade thousands of dollars annually. It is understood that shippers by rail are considering the adoption of a similar plan.

TRADE NOTES.

The Stillwell & Company, of Detroit, Mich., announce the removal of their office from 684 West Fort street to 301 Stevens Building, 31 to 39 Grand River avenue, near the Griswold House.

McOuat & McRae have recently shipped one of Duncan's patent resawing machines to Gillies Bros., Braeside, Ont., and another to the Great Northern Lumber Company, of Mount Tremblant.

The Hanchett Swage Works, Big Rapids, Mich., manufacturers of the celebrated "Hanchett adjustable saw swage" and other filing room tools, report a marked increase in their Canadian trade.

Owing to the large orders that the Syracuse Smelting Works have been receiving for babbitt metal, solder, Columbia phosphor tin, etc., they have been obliged to add more furnaces and to work day and night.

Messrs. Mixer & Company, wholesale lumber dealers, of Buffalo, N. Y., are sending out a leather pocket book with their name and address stamped on the inside—a useful article, and withal a good advertisement.

Mr. Alfred Rubbra has resigned his position as manager of the Machinery and Supply Department of the Laurie Engine Company, Montreal, and has opened a new machinery supply warehouse at 22 and 24 Victoria square, under the title of The Machinery Exchange. It is the intention to carry full lines of new and second-hand machinery. Mr. Rubbra has been appointed eastern agent for H. W. Petrie, of Toronto.

The Mengel Box Company, of Louisville, Ky., will equip their new veneer plant with "A B C" dry kilns. The American Blower Company have also an order for apparatus for a three-compartment kiln for the Laquin (Pa.) plant of the Brooklyn Cooperage Company. The same company is furnishing kilns for the Chicot Lumber Company, Blissville, Ark., Huntly Manufacturing Company, Silver Creek, N.Y., The Menasha (Wis.) Woode Ware Company, Buckstege Furniture Company, Evansville, Ind., Hastings (Mich.) Wood Working Company, The East Jordan (Mich.) Flooring Company, Evansville (Ind.) Desk Company, and J. C. Widman & Company, of Detroit.

McDougal & Cameron, of Vancouver, B. C., last month purchased two logging engines for their camp on Jervis Channel.

The Trites-Wood Company, Limited, has been incorporated by the British Columbia government, to carry on a general lumber and mercantile business.

The sash and door factory of the Fernie Manufacturing Company, at Fernie, B. C., is one of the best equipped establishments of the kind in the west. The machinery was furnished by J. L. Neilson & Company, of Winnipeg.

OBITUARY.

H. W. TODD.

The death occurred last month, in Liverpool, England, of H. W. Todd, of the firm of Watson & Todd, timber merchants, Liverpool, England, with branches at Ottawa and Montreal. He was 64 years of age. Mr. Todd gained his early experience in the lumber business with Mr. R. A. Watson, of Liverpool, whom he subsequently joined in business. About twenty years ago they turned their attention to the pine deal trade, and since that time have been large buyers of Canadian lumber. Last year their shipments from Montreal were upwards of 50,000,000 feet.

WILLIAM RICHARDS.

William Richards, one of the most extensive lumber operators on the Miramichi river, died at his home in Boiestown, N. B., on June 1st, after more than a year's illness.

Mr. Richards was born in Cardigan, York county, sixty-eight years ago. He was a son of the late Daniel Richards, who was a native of Wales. Mr. Richards had been a large lumber operator for more than thirty years, a little time on the Nashwaak for Alex. Gibson, but for many years on the Miramichi. He also operated a large saw mill at Boiestown.

Six years ago his business was transferred to a stock company, The Richards Company, Limited, of which he was president. He was widely known and mnch respected and a staunch Liberal.

EDMUND HALL.

Edmund Hall, a veteran lawyer and lumberman of Michigan, died at his home in Detroit on May 17th, after a very brief illness. Mr. Hall was born at Cayuga, N. Y., in 1819. He was admitted to the bar in 1847, practising for a number of years in Detroit, where he soon took rank as one of the cleverest lawyers in that section. About thirty years ago his other interests became so large that he gave up the practise of law entirely. He was contractor for the building of several state roads, receiving land scrip in part payment. He located valuable tracts of white pine in this way and soon became known as a lumberman.

Mr. Hall's early lumbering operations were largely confined to Michigan, his mills being located at Bay City. When the pine timber in that city gave out he invested in extensive timber tracts in the Georgian Bay district of Ontario, rafting the logs to Bay City. About three years ago he built a large saw mill at Sarnia, which is now in operation.

JOHN MACLAREN.

John MacLaren, a prominent citizen of Brockville, Ont., died at Kamloops, B. C., on May 29th from injuries sustained by being thrown from his horse while on a hunting trip up the Thompson river, fifty miles from Kamloops. Mr. MacLaren was spending a short time in British Columbia in connection with his lumbering operations at Barnet.

Deceased occupied a prominent place in business, social and religious circles in Brockville, where he resided. He was born at Buckingham, Que., about fifty years ago, being the son of the late James MacLaren, a prminent lumber merchant and former president of the Bank of Ottawa. As a young man he was associated with his father in the lumber trade. He spent several years at New Westminster, B. C., in connection with his father's interests and for a time lived at Windsor, Ont. In 1892 he removed to Brockville and purchased the James Hall Glove Works, which he considerably enlarged and operated up to the time of his death. He was also president of the Canadian Oak Belting Company, Brockville, and owned a large saw mill at East Templeton, Que.

Deceased was one of the stalwart members of the First Presbyterian church in Brockville, and took an active part in all branches of church work. He was a warm supporter of healthy athletics and an enthusiastic curler. In every sense of the word he was a public spirited citizen, always ready to give a helping hand to a just cause.

The surviving members of his family are Alexander and Albert MacLaren, of Buckingham, David MacLaren, vice-president of the Bank of Ottawa, and Mrs. William Alloway, of Winnipeg.

ALEXANDER FRASER.

The result of an attack of pneumonia extending over four weeks, Alexander Fraser, the pioneer lumberman of Ottawa, passed away at his home in that city on June 1st, at the age of 73 years.

From the first of his illness it was feared that he might not recover, owing to the fact that he had not been in good health for several years, though for a year previous to his death he had been very well.

The late Alexander Fraser was one of the last of the square timber pioneer lumbermen of the Ottawa Valley and was widely and favorably known from the headwaters of the Ottawa to Quebec.

He was a son of Hugh Fraser, a Higland Scotchman, a soldier who served in the 1812 war and later settled in Goulbourn, near Ottawa, where Alexander Fraser was born. Along about 1835, the late Hugh Fraser removed to the township of Pembroke and his son Alexander entered the employ of the late Hiram Chamberlain, of Westmeath, as clerk in his lumber supply store. It was here that he came into contact with the lumber men and Hudson Bay traders and acquired a taste fo the life of the woods and river. And when quite a young man he had already acquired such an expert knowledge of woods and river craft that he soon became a leader among men on the Ottawa river, and in 1853, at the age of 23, he took out his first raft of square

THE LATE ALEXANDER FRASER.

timber on Black river. As time went on he kept increasing his operations and during the seventies it was not unusual to see 10 or 12 of his rafts passing down the river to Quebec His energy was tremendous, and being a man of great physical strength and also a splendid constitution, no amount of application to business appeared to have any effect on his general health.

Mr. Fraser was possessed of a keen foresight and sound business judgement and was often by consent accorded a leading part in the management of large enterprises in which he was interested. He was one of the founders of the Bank of Ottawa, The Lachine Rapids Hydraulic Company, The Ottawa Trust and Deposit Company, and was also largely interested in The Upper Ottawa Improvement Company, The Keewatin Lumber Company, and many smaller enterprises.

He was of a very quiet and retiring disposition and extremely simple and unostentatious in his habits of life, but possessed of a strong will and great determination.

His business career was not one of uninterrupted success. He had at various times serious losses, sometimes running into several hundred thousands of dollars, but his greatest reverses occurred after he had attained a strong financial standing and was able to bear them easily.

Since the formation of the Fraser Lumber Company by his sons in 1855, the late Mr. Fraser had not been actively engaged in lumbering—his time was almost exclusively devoted to the enterprises in which he was interested outside of the lumber business.

His business relations, extending over nearly half a century, with such firms as Sharples, Dobell Beckett, Burstall, and McArthurs, were always of the pleasantest nature, and it was with these people that the great bulk of his business was done. His estate is estimated at between three and four millions.

He leaves surviving, his widow, three daughters, Mrs. Daw, Mrs. Fee, and Miss Madge Fraser, and two sons, J. B. and W. H. A.

The funeral of the deceased was very largely attended. Among the prominent lumbermen present were the following: Hon. E. H. Bronson, Messrs. R. Beckett, F. P. Bronson, Peter Whelan, Edward Skead, Levi Crannell, J. G. Bryson, Charles McLaren, J. R. Booth, C. J. Booth, G. B. Greene, W. C. Hughson, James G. MacLaren, John Mather, George Klock, J. C. Browne, Ottawa; E. H. Lemay, W. J. Poupore, Montreal; William Power, M.P., E. Harper Wade, Quebec; Claude McLaughlin, Arnprior; Hon. Peter White, Pembroke; David Gillies, George Gillies, Braeside; Robert MacLaren, Buckingham; Norman McCuaig, J. E. McCuaig, Bryson.

WILLIAM MOHR.

William Mohr, a prominent figure in the early lumber trade of the Ottawa valley, died at his home in the township of Fitzroy, near Renfrew, Ont., last month, in the ninetieth year of his age. His operations were confined to the square timber trade. He took many rafts to Quebec, his operations sometimes reaching 750,000 cubic feet in a season. He operated on the Quyon, Bonnechere, Petawawa, Dumoine and Madawaska rivers. He was particularly well known along the valley of the Bonnechere, where he year after year regularly made his trips to the shanties. It is said that he could fall a lofty pine with great despatch.

ALLAN GILMOUR.

Allan Gilmour, a well known lumberman of Ottawa, was on May 19th accidentally shot by a magazine rifle, death resulting almost instantaneously. It seems that Mr. Gilmour had arranged to go on a fishing trip and proceeded to get his tackle together. The store room was darkened and it is presumed that in reaching for his fishing rod the gun was in some way discharged.

Deceased was the eldest son of the late John Gilmour, a prominent lumberman, and was in his fifty-seventh year. He was a man of independent means, and a few years ago retired from active business life, although retaining an interest in the lumber firm of Gilmour & Company, Limited, of Trenton, Ont., of which company he was formerly president. Messrs. John Gilmour, of Ottawa, and David Gilmour, of Trenton, are brothers of the deceased.

PERSONAL.

Mr. E. H. Lemay, the well known lumber merchant, of Montreal, accompanied by Mrs. Lemay, recently returned from a three months tour through Europe. They visited Spain, Italy and Algiers.

Mr. E. A. O'Connor, formerly of St. John, N. B., and well known as a shingle expert, has removed to Salmon Lake, Que., to accept a position as foreman for the lumber and shingle mills of J. Fenderson & Company.

Mr. George W. Campbell, for several years manager of the Winnipeg branch of the British Columbia Mills, Timber & Trading Company, has accepted the management of the Tait saw mill at Vancouver, B. C., recently purchased by the Rat Portage Lumber Company.

PUBLICATIONS.

Mr. Robert Bell, of the Seaforth Engine and Machine Works, Seaforth, Ont., is sending out a new catalogue of his various lines of saw mill machinery, engines, etc.

Illustrated sectional catalogue No. 149, issued by the American Blower Company, of Detroit, and referring to exhaust fans, is a very complete work, neatly printed and containing a number of useful tables.

Eastern capitalists have formed a joint stock company to take over the extensive timber limits and logging business in British Columbia controlled by W. H. Higgins, of Vancouver. The principal limits concerned are located on the Toba river, near Malaspina Inlet. Mr. Higgins will continue as manager of the business.

THE GROWTH OF FQREST TREES AT THE CENTRAL EXPERIMENTAL FARM, OTTAWA.*

BY W. T. MACOUN, Horticulturist.

Experiments in the growing of forest trees at the Central Experimenal Farm were begun mainly for the purpose of gaining information which would be useful to the farmers of Canada, and the fifteen years' work accomplished has, we believe, been of some service to the farming community and also to others who are interested in the growth and development of trees from a more economic and scientific standpoint.

About twenty-one acres of the Experimental Farm have been devoted to the planting of forest trees in belts and clumps, and sixty-five additional acres have been used for an Arboretum and Botanic garden in which forest trees are planted as individual specimens.

The forest belts extend along the whole northern and western boundaries of the farm; the belt along the western side being 165 feet wide and that on the northern boundary 65 feet, their total length being nearly 1¾ miles. There is an evergreen plantation also occupying about 2 acres. These belts and plantation were planned by Dr. Wm. Saunders, the director, and the first planting was done in the year 1887.

The main points on which information was desired were: First, as to the rate of growth of the best timber trees when grown on different kinds of soil and at different distances apart ; the distances chosen at first being 5 by 5 feet, 5 by 10 feet, and 10 by 10 feet. Second, it was desirable to know how the growth of trees planted in blocks of one species compared with those grown in mixed plantations. Third, it was important to learn what influence the forest belts would have on the crops in the adjoining fields, in regard to the shelter afforded them, and also how far from the belt the crop would be affected adversely. Fourth, the planting was also planned as far as possible with the object of improving the landscape, and the several species were arranged so that a good effect would be produced.

These were the principal objects in view in establishing the forest plantations. We propose to endeavour to show how far these objects have been accomplished.

First, with regard to the comparative growth of trees when planted on different kinds of soil and at different distances apart. The soil in which the trees were planted was in some instances poor, in some cases wet and cold, in others heavy clay loam, black muck, sandy loam, and also in gravelly soil—a great variety of soil being represented in the 1¾ miles of forest belts.

The black walnut thrives well and grows rapidly on warm sandy loam but is almost at a standstill in wet, cold, sandy soil and the trees are stunted and practically useless. This is very interesting, for in Western Ontario this tree thrives best in river bottoms, but it is a good example of how trees taken from a comparatively warm and dry part of the country must be given a warm soil in a colder climate, even though there is less moisture in the ground. A number of species of Canadian trees as they reach their northern limits are found growing on much higher altitudes than where they grow to perfection. The hard maple is an example. This tree as it goes north seeks the hillsides. In the Maritime Provinces also it is found on the high elevations. The white, red, and green ash grow almost equally well on wet, cold soil, heavy, clay loam, black muck and gravelly soil. The black ash only succeeds where there is an abundant supply of water.

White, canoe, and yellow birches all thrive on the light soils, but they also do well on heavier and wetter ground.

The hard maple succeeds best and grows quickest in warm sandy loam. In clay loam it makes a healthy but slow growth, the growth lessening as the loam gets stiffer. Good drainage is very essential for the vigorous growth of this tree. The red maple does best in moist ground and the rate of growth is largely governed by the amount of moisture in the soil. It is unfortunate that so many of these trees have been planted along the streets of Ottawa, as the permanent roadways and walks which are being made in the city prevent these trees getting the moisture which they require and they are gradually sickening and dying. The red maple has a wide range from north to south in America, and it has been found at the Experimental Farm that trees of this species imported from the South are in some cases not hardy. The silver maple thrives in a greater variety of soils than the red and is a more rapid grower. It, however, also requires a plentiful supply of moisture to make its best growth.

*Abstract of a paper read before the Canadian Forestry Association.

The white or American elm has been tested at the Experimental Farm in a great many kinds of soil. There is an elm avenue about ¾ of a mile long, and by driving along this the rate of growth of the trees on different kinds of soil can easily be noticed. This tree is making the strongest growth in the warmer but fairly moist soils. Where the subsoil is a cold, compact sand it does not thrive nearly as well. The elm makes remarkably rapid growth where the conditions are favourable. Avenue trees planted in 1888 when about 11 feet high and 1½ inches in diameter 4 feet 6 inches from the ground are now 37 feet in height and 12½ inches in diameter at the same height from the ground. The red and rock elm have also been tested in the forest belts, but these are not important timber trees.

The beech does best in warm, sandy loam here like the hard maple, but does very poorly where the soil is wet.

The basswood is one of the noblest trees and thrives well in the Ottawa district. It succeeds best in rich, warm soil and seems to require a fair amount of moisture. It has not done so well on light, sandy land. The butternut also grows well here, but does best in warm rich ground.

Poplars and the large growing willows have made very rapid growth on most soils, but on stiff clay loam the willows have made least growth, though the poplars do well in it. The Russian poplar made strong growth at first, but of late years have been affected with a dry rot which is gradually destroying them. The white poplar is very subject to borers, and the aspen is too small a tree to be of much value. The two species which are making the best growth and the finest trees are the cottonwood and the balsam poplar. These are fine specimens and reach noble proportions here.

The white spruce makes the moist rapid growth on warm, sandy loam soil at Ottawa. It does well on gravelly soil and fairly well on clay loam. The Norway spruce, which is the fastest growing spruce we have, makes its greatest growth in good sandy loam. It also succeeds well on gravelly soil and clay loam ; in fact, it has made good growth in all kinds of soil in which it has been tested, but makes the poorest growth in the lightest sandy loam.

The American arbor vitae thrives in almost all kinds of soil. It is most at home, however, on the black and moist ones. It makes the least growth in heavy clay.

There is no forest tree which appears to succeed as well in such a diversity of soils as the Scotch pine. This tree makes strong growth in cold, poor soil, in clay loam, and in warm sandy loam ; in fact, we have not discovered a soil at the Experimental Farm in which it does not thrive. The white pine succeeds best in sandy loam, and although it makes a healthy growth on heavier and moister soils, the growth is much less.

One of the most striking trees at the Experimental Farm is the European Larch. Like the other European trees, the Scotch pine and the Norway spruce, the Larch succeeds almost equally well on all kinds of soil. A block of these trees in the forest belt, in cold, sandy loam soil, have made very satisfactory growth, while equal if not better growth has been made on the highest sandy loam on the farm. The trees have also made strong growth on heavy clay loam. The Larch saw-fly is, however, very troublesome, and if the trees were not sprayed they would be defoliated every year. It is a remarkable fact that in the Arboretum where specimens of the European Larch and our native Tamarac are growing within a few feet of one another, the saw-fly has not attacked the native species. Tamarac transplanted from a swamp adjoining the Experimental Farm have surprised us by succeeding admirably on the higher ground in sandy loam soil. Whether the tree will reach a large size in this soil has not yet, of course, been determined.

As already stated, the trees in the forest belt were planted 5 x 5 feet, 5 x 10 feet, and 10 x 10 feet apart in order to learn which was the most satisfactory method. These distances have all been found too wide. Where the tress were 10 x 10 feet apart, cultivation was stil necessary, in some cases eight years after planting, in order to prevent sod from forming, and to get the trees to make satisfactory growth. The lower limbs of trees planted 10 x 10 feet apart have in many cases not yet died, the result being that the trees have knotty trunks. The tops of the trees planted 10 x 10 feet apart have also been more broken by storms than those planted closer. The main objection, however, to such wide planting is in having to keep the ground cultivated for so many years.

Even 5 by 5 feet has not been found an economical distance, as cultivation had to be kept up for from five to seven years, depending on the species and the arrangement of the trees. The most satisfactory growth from a forestry standpoint has been obtained in a solid plantation of evergreens, which was in 1877 a nursery, but which was allowed to remain and was extended. The trees in this plantation were in rows 3 feet apart and the trees from 1 to 2 feet apart in the rows. These have done remarkably well, growing tall and straight, and having their lower branches killed early owing to the dense growth. This plantation has been gradually thinned until the trees are now about 3 by 4 feet apart but the distance will be widened somewhat this year, as more will be taken out for poles.

During the past three years some new plantations have been made in the forest belts where certain kinds of trees have failed, and the trees in these blocks were planted only 2½ by 2½ feet apart. These were not really all timber trees, as a large proportion of shrubs and small trees were used for the purpose of shading the ground and saving cultivation. Several kinds of trees and shrubs were used for this temporary purpose, with the object of finding out which were the best. It may be found that 2½ by 2½ feet apart is an extreme in close planting, and that a slightly wider distance would be more satisfactory.

It has already been said that the trees in the forest belts were planted in blocks of a single species and mixed plantations in order to demonstrate which was the better plan. The rapid growing evergreens have succeeded about as well in unmixed blocks as where mixed with deciduous trees and other species of evergreens, but the deciduous trees have required much less labour to keep them growing vigorously where the species have been mixed. For instance, the ash, walnut, butternut and elm, though rapid growing trees, have thin foliage, and in the case of the ash, walnut and butternut are late to leaf out in the spring. The result is that there is greater opportunity for grass to grow ; there is also greater evaporation from the soil, as the leaves are not thick enough to shade the ground thoroughly. The result is that the trees do not grow as rapidly as if there were no sod and the ground well shaded.

The hard maple, oak and beech are rather slow growing trees, and although they have heavy foliage do not grow rapidly enough when planted in rows and cultivated to shade the ground in a reasonable time.

The quick growing but thin foliaged trees require the thick foliaged deciduous kinds and the evergreens planted among them to make good soil conditions and give best results, and the thick foliaged but lower growing kinds require the others for the same purpose. The box elder is both a thick foliaged and rapid growing species, and hence a very useful kind as a temporary tree.

There is another advantage in having a mixed plantation on a farm, and that is that injurious insects spread less rapidly and are easier controlled than where the trees are in blocks of a single species.

A number of average trees were selected in 1893 in the principal parts of the forest belts and for the past ten years annual measurements have been made of these trees. The average is taken of these average trees and the results published from time to time in the annual reports of the Experimental Farm.

Some of these measurements may be of interest to this Association :

Name.	Distance Apart.	When Planted.	Height When Planted.	Soil.	Height, 1902.	Diameter, 4 ft., 6 in. from ground, 1902.
	Feet.		Inches.			
White Pine	5x5	1889	8–10	Light sandy loam with gravel.	25 3	3 4-5

ONTARIO CROWN LANDS.

The report of the Commissioner of Crown Lands of Ontario for the year 1902 states that the total revenue collected on account of the Woods and Forest branch was $1,331,352.10. Of this sum $1,078,273.35 came from timber dues; $227,667.84 from bonuses; $61,039.41 from ground rent, and from transfer fees $4,371.50. The revenue collected on account of timber dues is the largest in the history of the Province. The collection on account of bonuses is derived from timber sales of previous years.

The report refers to the prosperous condition of the lumber trade. Wages in the woods not many years ago ran from $14 to $18 a month. Last year the range was from $25 to $32, and even then men were hard to obtain. All kinds of supplies increased in price, and the cost of getting out logs, delivery at the mills, and sawing and shipping the lumber was much enhanced, leaving the lumbermen no more than a fair profit.

The statement of timber cut on Crown lands for the year is as follows :

Area under license	17,408	sq. miles
Pine saw logs	615,831,433	ft. B.M.
Other saw logs	38,654,341	"
Pine boom and dimension timber	38,539,856	"
Other dimension timber	4,994,334	"
White pine square timber	1,468,756	cub ft.
Ash timber	169	"
Pile timber	1,022,483	ft. B.M.
Cedar	362,491	lin. ft.
Cord wood	31,562	cords
Tan bark	10,723	"
Posts	5,394	"
Railway ties	2,575,255	pcs.
Telegraph poles	10,824	"
Head blocks	343	"
Shingle bolts	521	cords
Pulp wood	29,703	"
Heading bolts	24	"

SAWDUST AND FISH LIFE.

A paper bearing the above title was read before the Canadian Institute by A. P. Knight, M. A., M. D., Professor of Animal Biology at Queen's University, Kingston, and has been reprinted for distribution. It is a very valuable work, reviewing as it does the experiments which have been made by leading scientists to determine the effect of sawdust upon fish life.

Professor Prince, Dominion Fish Commissioner, says : "So far as our present knowledge goes, sawdust polution, if it does not affect the upper waters, the shallow spawning and hatching ground, appears to do little harm to the adult fish in their passage up from the sea. There is no case on record of salmon, or shad, or any other healthy adult fish being found choked with sawdust or in any way fatally injured by the floating particles."

Mr. Bastedo, Deputy Commissioner for the Province of Ontario, expresses the opposite view in the following words :

"There can be nothing more destructive of fish life than the depositing of sawdust in the rivers and lakes. It is said to absolutely kill all vegetation, and it is well known that in waters where there is no vegetation fish life is noticeably absent. Minute crustacea of various kinds feed upon the juices of the plants which are to be found at the bottom. These afford food for the smaller fish, and again these furnish food for others of larger size."

In the year 1900 Professor Knight, with the above facts before him, undertook some experiments at St. Andrews, N. B., for the purpose of ascertaining whether or not sawdust was injurious to fish life. The results went to show that brook trout were not injured by living for two weeks in a water tank largely filled with sawdust so long as a copious supply of water was allowed to run into and out of the tank. These results were corroborated by subsequent experiments carried on in the biological department of Queen's University. When, however, sawdust was allowed to lie in still water, or in very slowly running water, entirely diffierent results were obtained.

Prof Knight made a series of experiments which show comparative results at a glance. Two grams each of different kinds of sawdust were placed in shallow circular dishes containing respectively 300, 400, 500, 600, 700, 800, 900, 1,000, 1,200, 1,500, and 1,700 c.c. of fresh water. After soaking for about five hours in each case, a minnow was placed in each of the dishes. The length of time each animal lived was carefully noted, except in those cases where death occurred during the night. The results for white pine, Ontario cedar and British Columbia cedar are given below :

WHITE PINE SAWDUST.

Weight of Sawdust	Volume Water c.c.	Time Soaking	Time at which minnow was immersed.	Resutls.
2 grams.	300	10 a. m.	2.43 p. m.	Lived about 9 minutes.

"	1200	"	"	" 1 " 36 "
"	1500	"	"	" 3 " 50 "
"	1700	"	"	" 3 " 29 "

Concerning experiments made on the Bonnechere River Prof. Knight says the results point unmistakably to the conclusion that the sawdust poured into the river is not destroying its fish life. Moreover, in Golden Lake, an expansion of the same river, and ten miles above any saw mill, lake trout used to be very abundant. Every October large numbers were caught in nets along their spawning beds. Now these spawning grounds are reported to be deserted by fish, and certainly sawdust cannot be blamed for their disappearance. Higher up the river, in Round Lake, the October fishing is still good, solely because there are fewer settlers and less fishing.

The conclusions of Prof. Knight are summarized as follows :

1. Strong sawdust solutions, such as occur at the bottom of an aquarium, poison adult fish and fish fry, through the agency of compounds dissolved out of the wood cells.

2. The overlying water in such an aquarium does not at first kill fish. After about a week it does kill, but solely through suffocation, the dissolved ozygen having all been used up.

3. Bacteria multiply enormously throughout all parts of such an aquarium, and through oxidation change the poisonous extracts to harmless compounds. Mosquito larvæ live on the bacteria. No doubt, in natural pools, other aquatic insect larvæ live on bacteria also.

4. Subsequent aeration and sedimentation of sawdust water purify it, so that fish can live in it without injury.

5. Since adult fish and black bass fry both refused to be driven into pine extracts in the bottom of an aquarium after they had experienced its poisonous effects, we may infer that fish would desert a river much polluted with sawdust, going down stream and into tributaries to escape from the disagreeable influence of sawdust extracts.

6. No stream can be pronounced off hand as poisoned by sawdust. Each stream must be studied by itself and the varying conditions must be thoroughly understood before a judgment can be pronounced. The chief things to be considered are (1) the quantity of sawdust, and (2) the volume of water into which the sawdust is discharged. Subordinate conditions are the rapidity or sluggishness of the stream, the amount of sunlight or shade, and the character of the water, whether from agricultural lands or from primitive forests.

7. Further observations and studies along sawdust polluted streams and rivers of Canada are urgently needed before more definite conclusions can be reached.

THE NEWS

—Mr. Shea has remodelled his saw mill at Doe Lake, Ont.

—C. T. White is building a new saw mill at Apple River, N. S.

—Moir, Son & Company have completed a new box factory at Halifax, N. S.

—F. E. Sayre & Company have completed their new saw mill at St. John, N.B.

—Dumont, Fontaine & Cie, sash and door factory, Gentilly, Que., have registered partnership.

—The Victoria Lumber & Manufacturing Company are building a shingle mill at Chemainus, B.C.

—Forest fires in the vicinity of Amherst, N. S., early in May destroyed considerable standing timber.

—The Cushing Bros. Company have installed new machinery in their planing mill at Edmonton, N. W. T.

—B. Quinn, of Windsor Mills, Que., has purchased from Joseph Bedard his saw mill and limits at that place.

—Incoraportion has been granted to the W. A. Dunn Lumber Company, of Toronto, with a capital of $40,000.

—The lumber yard of Klassen & Wieve, Altona, N.W.T., has been sold to the Prairie Lumber Company.

—The Deseronto Milling Company have purchased the Easterbrook mill at Tweed, Ont., for the sum of $16,000.

—R. Walker, of London, Ont., has purchased the lumber business of E. H. Mathias at Morningside, N. W. T.

—The Arrowhead Lumber Company, Limited, of Arrowhead, B.C., has been incorporated. The capital is $250,000.

—James W. Day has purchased the woodworking factory at Parrsboro, N. S., formerly operated by E. Spencer & Son.

—A. M. Stewart, of Morden, Man., has disposed of his lumber business at that place to the Canadian Elevator Company.

—It is stated that the saw and shingle mill at Fenelon Falls, Ont., owned by the Rathbun Company, of Deseronto, will be enlarged.

—The Rat Portage Lumber Company have given the contract for the erection of a large saw mill at Winnipeg to Stephen & McKinnon.

—The Brodhagan Lumber Company, of which Mr. Benniweiss is president, are building a saw mill on Cecebe Lake, Muskoka district.

—The Hastings Shingle Manufacturing Company, of Vancouver, B C., are building a large flume for floating shingle timber from their limits to the mill.

—Irons & Winnacott, of Huntsville, Ont., have the new addition to their planing mill well under way. It will contain the machinery for the manufacture of sash and doors.

—The St. Anthony Lumber Company, of Whitney, Ont., have built a logging railway which will enable them to get logs to the mill without waiting for the slower method of river driving.

—The Victoria Lumber & Manufacturing Company have installed four new boilers in their saw mill at Chemainus, B.C. They were supplied by the Victoria Machinery Depot, of Victoria.

—The Gull River Lumber Company, of Coboconk, Ont., has been incorporated, with a capital of $40,000. The directors are G. W. Stevens, J. A. Peel, Edward Noice and R. J. McLaughlin.

—The saw mill and timber limits of A. E. Alexander at Campbellton, N.B., has been transferred to the Wm. Richards Company, Limited. It is understood that the purchase price exceeded $110,000.

—T. A. Burrows, G. A. Mantle and H. E. Crawford, of Winnipeg, and William Cowan and E. H. Moore, of Prince Albert, N.W.T., ha formed a partnership to carry on a lumber and pulp wood business.

—The saw mill at Sidney, B.C., has been remodelled and again put into operation. George Cudhee is manager, and J. W. Wey, of Tacoma, head sawyer. United States capitalists are largely interested.

—John Hanbury, of Brandon, Man., has sent out cruisers to survey the timber limits in British Columbia which he recently purchased. It is understood that mills will be erected in the vicinity of Vancouver.

—The new mill of G. L. Burtis at Thessalon, Ont., is nearing completion. It will be operated day and night, as it is expected to cut 30,000,000 feet of lumber this season. The local manager is Mr. J. H. Vice.

—C. Ward and H. S. Barton, of London, England, have decided to build a saw mill of 50,000 feet capacity per day at Trout Lake City, B.C. A contract has been given for the cutting of 1,000,000 feet of logs to be delivered at the mill this summer.

—An exhibit of the timber, mineral and salmon industries of British Columbia will be made at the Louisiana Purchase Exposition next year. William Hutchison and W. H. Hay are making arrangements for the display.

—The largest private electric plant in New Westminster is now in operation at the Brunette Saw Mills. It was recently installed by the Hinton Electric Company, of Vancouver, and is capable of supplying 3,000 candle power.

—The Grand Valley Company, Limited, has been incorporated to conduct a lumber business, with headquarters in the city of Quebec. The incorporators include T. G. Meredith, Narcisse Bechard, Reginald Meredith, A. E. Scott, and Ferdinand Audet, all of Quebec.

—The Burrard Inlet Flume & Boom Company will soon have completed their large flume for conveying shingles bolts from the west bank of the Capilano river tosalt water, a distance of eight miles. J. G. Woods is managing director of this company, and H. H. Spicer secretary.

—John Angus McBean, foreman of Alex. Gibson' slog driving operations, was killed on the Nashwaak river near St. John, N.B., on April 21, being crushed under a brow of logs. He was 46 years old, and had been associated with Mr. Gibson's lumbering operations for many years.

—The Ontario-Slocan Lumber Company's new four machine shingle mill at Slocan City, B.C., made a very satisfactory start a few days ago. The company will at once proceed with the erection of their large saw, planing and other mills, and hope to have all completed during the year.

—A party of twenty-three students at the School of Forestry of Cornell University recently visited Ottawa. They inspected the Experimental Farm and were shown the experiments in forestry undertaken by the officials of that institution. They also visited the large saw mills in the Ottawa district.

—Andre Cushing & Company, of St. John, N.B., have for some time been conducting experiments with a view to utilizing the refuse of their saw mill for the manufacture of wood board. It is said that they have been successful and will erect a large plant at St. John. The firm holds both the Canadian and American patents on the process.

—R. M. Jack, of North Sydney, N. S., recently returned from Newfoundland, where he surveyed timber limits on which the Dominion Iron & Steel Company have an option. It is understood that his report is favorable. The company desires the limits for the purpose of obtaining a supply of pit props and other timber for their mines.

—The Northwest Lumber Company has been incorporated, to establish lumber yards in Raymond, Magrath and Stirling, Man. The supply of lumber will for the present be obtained from the Northern States, although eventually a mill will be built in the vicinity of Stirling. The manager of the company is L.H. Baker, with headquarters at Raymond.

—Much sympathy is expressed for Messrs. Davidson & Thackray, of Ottawa, in the total destruction of their planing mill by a fire which occurred on June 4th. Their loss it estimated to be above $200,000. This is the third total loss the firm has encountered within ten years, while Mr. Davidson was a heavy loser by the destruction of the Hotal Cecil last fall.

—Messrs. Ross & Taylor, of the Exeter, Ont., Planing Mills, have added to their already large enterprise by the purchase of the business which has been successfully carried on for the past thirty years by the late James Willis. They have purchased the entire stock of lumber, shingles, etc., and have leased the yards for a term of years. With this addition to their stock they have now a very extensive and well equipped lumber yard.

The Vancouver Engineering Works, Vancouver, B. C., recently turned out what is claimed to be the larges logging engine ever manufactured in British Columbia It has cylinders 10-inches in diameter by 15-inch stroke, and the bedplate is made of 15-inch steel I beams. The main drum will accommodate 1½ miles of ⅞-inch cable. The boiler is 60 inches in diameter and 131 inches high and will carry a working pressure of 150 pounds of steam. The engine was built for the British Columbia Mills, Timber & Trading Company, of Vancouver, B.C.

Emery Wheels, Corundum Wheels
and Grinding Machinery

All our wheels are first-class in every respect. All special shapes supplied without extra charge.

Are you using our **Improved Corundum Saw Grinding Wheels?** We guarantee them to cut faster and cooler than any other wheels on the market. Will not burn saws and are just what your **filer wants.**

Send **sample order** to be supplied on approval.

Canadian Corundum Wheel Co.
Hamilton, Canada

WOOD PULP DEPARTMENT

MECHANICAL WOOD PULP.

Lord Strathcona, the Canadian High Commissioner in Great Britain, in his last report to the Department of Trade and Commerce, thus refers to the pulp industry :

Some surprise is expressed that the development in Canada so far should have been in the direction of mechanical wood pulp rather than in sulphite. The trade in the latter in the United Kingdom is much larger than in the former, the quantities consumed being about the same, viz., 250,000 tons, but while mechanical pulp is shipped containing 50 per cent. of water, chemical pulp is shipped air dry, consequently the actual amount of fibre in sulphite is almost double that of mechanical. The following is an extract from a letter received on the subject :—"We must strongly urge for future developments in Canada properly organized sulphite mills, and there can be no doubt that the future of sulphite making lies in Canada. Our reasons for this statement are the following : We have seen that Canadian mechanical pulp mills can compete successfully with Scandinavia. The only advantage they have over the Scandinavians is a modern plant and cheap wood, and the disadvantages under which they labour are the extra freight rates. Now, the wood necessary to make a wet ton of mechanical wood pulp in Scandinavia costs on the average 11s per ton ; and in the best situated mechanical mills in Canada is said to cost 6s a ton. A Canadian mechanical wood pulp maker therefore starts out with an advantage of 5s per ton wet ; against this he has an extra freight to pay of 5s to 6s a ton at an optimistic estimate, and therefore has no present great advantage, except that of modern plants, over his Scandinavian competitors. But reversing the position to chemical pulp making, the wood necessary to make a ton of chemical pulp costs in Scandinavia 60s, because the bulk of the wood boiled is boiled away ; reckoning the wood costs 3 dols. a cord at the mill, it would cost the Canadian only 30s for his wood to make a ton of pulp, and leaves him an advantage of 30s per ton. Against this he would have an extra freight to pay on dry pulp of 7s 6d, and he starts out making pulp with a certainty that he can get his raw material so cheaply that he can manufacture 20s to 22s per ton less than the Scandinavians. The answer to this argument is, of course, why don't the existing mills do it, and the reply to that again must be that whereas any intelligent man can become a fairly expert pulp grinder in six months, in sulphite making great experience is required, and many a man who has been a sulphite maker all his life cannot make sulphite when he dies. The sulphite maker, like the paper-maker, is born, and the workmen who can be obtained in Canada are not sufficiently experienced, and do not take the care requisite in the manufacture of a good sulphite pulp. All these are difficulties which can be overcome, and Canada is to-day making no fair share of the sulphite of the world, and it is in this direction that it will be a pleasure for the writer to convince your lordship that the future development of Canada in the pulp trade is possible."

HARMSWORTHS SECURE PULP LANDS.

The announcement was made about one week ago that the Newfoundland Timber Estates, Limited, in which H. M. Whitney, of Boston, and B. F. Pearson, of Halifax, are interested, had taken over the timber possessions in Newfoundland owned by Lewis Miller, of Scotland. It transpires, however, that most of this property has been taken over temporarily by the Whitney Company, and that they will operate it only for the remainder of this season. It will then be taken over by Harmsworth Bros., publishers, of London, England, who, it is said, will make an investment of about $10,000,000 in the purchase and equipment of their Newfoundland property.

Mr. Beeton, hydraulic engineer for the Harmsworths, has visited Russia, Finland, Norway and Sweden in search of suitable pulp lands, and believes that the property which they are about to acquire is admirably adapted to meet their requirements. The property consists of over one million acres, located on the Exploits River, Indian Lake, Lloyd River, King Georges Lake, Victoria River and Victoria Lake. The watershed is over 2,000 square miles, so that a famine in the water supply may be said to be out of the question.

At Grand Falls, on the Exploits River, the Harmsworths will build a mechanical pulp mill, a sulphite pulp mill, and a paper mill capable of producing 1,000 tons of paper per week. This amount of paper will be required for their various publications. It is estimated that the time necessary to erect the mills will be between two and three years.

One of the advantages of Newfoundland for pulp is that in the case of forest fires, or of spruce being cut down, the second growth is invariably spruce.

PULP AND PAPER MAGAZINE.

Messrs. Biggar-Samuel, Limited, Toronto and Montreal, have issued the first number of a publication entitled " The Pulp and Paper Magazine of Canada." It contains 52 pages, of regular magazine size. Articles in the first number include the following : "Fibres for Paper Making," by Earnshaw Bradley, C. E., Toronto; " Canada and her Forests," by George Johnson, Dominion Statistician, Ottawa ; " The Pulp Mill at the Soo," (with folding plate), by E. G. N. Cape, C. E., Montreal; "The British Paper Industry and its Relation to Canadian Trade," " Anglo-Canadian Pulp Trade," and other interesting contributions.

SWEDISH WOOD-PULP MARKET.

Consul R. S. S. Bergh writes from Gothenburg to the United States government, April 22, 1903, as follows : "Swedish newspapers state that by reason of the unsatisfactory condition of the wood-pulp market, Swedish and Norwegian manufacturers have agreed to diminish their production. According to reports, 39,834 tons of paper were exported from Gothenburg during the year 1902, or nearly 64 per cent. of the total export from Sweden, and 7,497 tons of pasteboard or building paper (nearly 92 per cent. of the whole). The quantities of wood pulp exported from Gothenburg were : Chemical, dry, 40,064 tons, or nearly 25 per cent.; chemical, moist, 4,753 tons, or more than 47 per cent. mechanical ; dry, 22,339 tons, or more than 69 per cent., and moist, 7,604 tons, or more than 14 per cent. of the total export from Sweden.

PULP NOTES.

It is expected that the pulp mill of the Metabetchouan Pulp Company, at Metabetchouan, Que., will be in operation by the end of May.

W. & J. Sharples, of Quebec, who are largely interested in the River Ouelle Pulp & Lumber Company, are reported to have decided to increase the manufacturing capacity.

Mr. Grosset, managing director of the St. John Sulphite Pulp Company, arrived at St. John last month from Scotland to make an inspection of the pulp mill at Mispec.

The William Hamilton Manufacturing Company, of Peterborough, Ont., have supplied ten large turbines for the new pulp mills of the Canada Paper Company at Windsor Mills, Que.

The Quatsino Power & Pulp Company, of Vancouver, B. C., are preparing for active operations on Quatsino Sound. The intention is to erect a saw mill at once, and a pulp mill at a later date.

The experiment of running a pulp wood camp in the woods all summer will be tried near Gilchrist, Mich., this year. If the experiment is a success it will revolutionize the pulp wood cutting industry and avoid the present danger of shortage of pulp wood.

A Mr. Campbell estimates that the cost of pulp wood in Ontario is $4 per cord, which will make 1,850 pounds of air-dry pulp. In Norway and Sweden it is estimated that the cost of pulp wood is higher, the difference amounting to about $3 per dry ton of pulp in favor of Canada.

A paper on "The Chemical Industries of Canada" was read by W. R. Lang, B. Sc., at an open meeting of the Canadian section of the Society of Chemical Industry in the chemical lecture room of Toronto University on May 6th. The author gave some attention to the pulp and paper industry.

From Great Britain comes the information that the Canadian Finance Syndicate, Limited, has been organized, with a capital of $75,000, to acquire timber limits and water powers and engage in the manufacture of pulp and paper in the province of British Columbia. The water powers are located on the Findlay river and lakes.

The North Shore Power & Railway Company, in which Thomas Meaney, of Toronto, is interested, are actively pushing operations on their works at Seven Islands, Que. During the past month a contract was given to Michael Connolly, the well-known contractor, Montreal, to construct a railway, wharves, pulp mills, and other buildings.

The Island Power Company, which secured a large timber concession from the British Columbia Government, for pulp purposes, is reported to have sold out to English capitalists. The Oriental Power Company, has in reserve all the timber limits on Princess Royal Island in British Columbia, is also reported to have disposed of its holdings to an English company. These English

capitalists are said to be pledged to spend between one and two million dollars in the establishment of pulp mills.

It is reported that American capitalists are considering the construction of a pulp mill at Lac du Bonnet, Man., situated on the Winnipeg river. About Lac du Bonnet there a,e stretches of country that is well timbered with spruce and other pulp wood, and a sharp variation in the level of the water there furnishes the natural requirements for a good water power.

The case of the Bank of Montreal and other bondholders of the Maritime Sulphite Fibre Company against the company and the Royal Trust Company has been settled. The difficulty arose over the winding up of the pulp mill at Chatham, N. B. The claim of Lieutenant-Governor Snowball against the company has been referred to arbitration, Judge Barker having been selected as arbitrator.

Proceedings have been taken to wind up the Blanche River Pulp & Paper Company. The assets of the company are said to be $3,000 and the liabilities $6,000. The reason given for the unsatisfactory state of the company's affairs is that the land grants to veterans have been taken largely out of the territory covered by the company's concessions. These grants carry with them rights to timber included in the concession to the company. Hence the company's material was being limited to narrower bounds by the progress of settlement.

The question of the determination of moisture in wet wood pulp is a matter which has occupied the attention of everyone connected with the industry. It has been the cause of innumerable disputes, as well as the subject of careful investigation on the part of many experts. It is learned that the Chicoutimi Pulp Company, of Chicoutimi, Que., have engaged Mr. G. Davis, of the firm of Davis Bros., of Manchester, England, to thoroughly investigate the arrangements for the determination of moisture, with a view to putting them on a reliable working basis.

W. McCredie, writing from the Temiscaming district, says: "An intending settler makes application for his lot of 160 acres, pays the Government five dollars; he has at the end of four years to pay a total of fifty cents an acre, clear sixteen acres, and have built on his lot a house at least 16 by 20; then he will get his title. But supposing him to be so poor he can only raise five dollars and get there, when he has located his lot he can go to any one of the three companies buying timber in that country and say, 'I am poor; I want an axe, saw and a load of provisions to live on, and a horse, harness, hay, oats, etc.' He will get those articles cheaper than he can at the retail stores. He then goes to work cutting pulp wood, for which he gets $2.50 per cord, on the banks of any of the streams that will float it down. When his provisions are gone he can go back and get more till the spring, when the company will send their agent up to his place, measure his winter's cut, and pay him the balance due in cash. He can then go and chop and clear the land he has taken his timber off during the winter; and each succeeding winter repeat the operation. I learned that settlers last winter cut from one hundred to eight hundred cords each."

It is announced that the Rainy River Pulp & Paper Company, of which Hon. George E. Foster, of Toronto, is a director, have secured a timber concession of 270 square miles from the Ontario Government. The company are making preliminary surveys for flumes, dams, mills, etc., and intend erecting a 30-ton mechanical pulp mill and a 15-ton chemical mill. They will also erect a saw mill and do a general lumbering business. They expect to have the saw mill in operation next spring, and the pulp mill by the spring of 1905. The area of the concession is covered with banksian pine, poplar, spruce, tamarac and cedar.

SHERBROOKE, QUEBEC.

The illustration shows a right hand model with 60 inch disc.

We make them both right and left hand, and with 60 inch and 48 inch discs.

Several attachments for turning the wood may be obtained from us, one of which is shown herewith.

Prices, etc., on application.

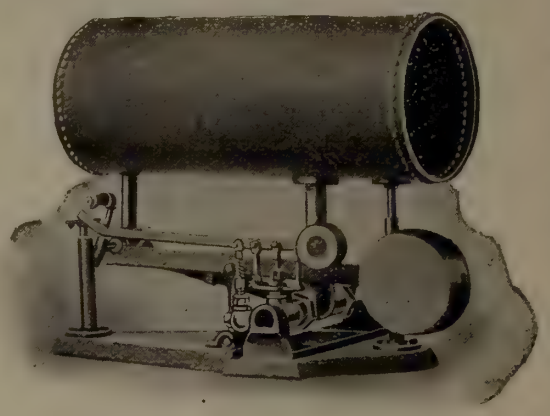
THE MOREHEAD RETURN TRAP.

The condensation from any steam heating or cooking apparatus must be removed. The more quickly the condensation is removed the drier and more effective will be the heating surfaces. It is the greatest extravagance to waste it, as it is pure water, and hot. The most effective way to utilize the heat it contains is to deliver it into the boiler before it loses its latent heat, and in no other manner can the condensation be handled as quickly and with the same economy as with a return trap.

The Morehead return trap is constructed of steel, the heads and longitudinal seams being closely riveted and calked, to withstand any pressure carried on the boiler without breaking, which is impossible with cast iron traps. It is the embodiment of simplicity, there being no rubber joints to blow out or leak, and only one valve, which is on the outside. All working parts are on the outside, in plain sight, and easily accessible. There is no ball or globe float inside the receiver to collapse, rust, leak or stick.

This trap is located six feet or more above the water-line of the boiler. The water from the condensing surfaces is forced by the pressure of steam from behind, through a pipe leading to the trap with a swing check valve close to the latter. As soon as sufficient water has entered the receiver to overcome the counterbalance weight, the receiver tilts down, allowing the water to pass through the discharge pipe, at the same time opening the steam valve, which has a pipe connected with the dome of the boiler.

By equalizing the pressure on the surface of the water in the receiver with that in the boiler, the water, in simple obedience to the laws of gravity, flows into the boiler. As soon as the receiver is empty it tilts back as before, and again refills. The trap is prompt in opening and closing, its action being entirely due to gravity. When once set up it requires no further attention. It takes the water from the condensing surfaces whether they are above or below the water level in the boiler, and automatially returns it to its boiler at the temperature due to the pressure at which the steam is condensed. There is no outlet by which the steam can be wasted. The trap is quick and positive in delivering the water into the boiler against any pressure, and regardless of fluctuations of pressure. It supplies all the water needed in the boiler from the main water pipe, providing there is enough pressure on the main to lift the water to the trap, thus performing the duties of a pump injector. It operates equally well with high or



THE MOREHEAD RETURN TRAP.

low pressure coils, or coils using exhaust steam, allowing no condensation to collect in them.

For a boiler plant of 200 horse power having an efficiency of 65 per cent. and an evaporation of 6,900 pounds of water per hour, from and at 212 degrees, under average conditions, the saving effected by a Morehead return trap for a year is more than twice the cost of installing one large enough to handle such a plant.

Where a Morehead return trap is not employed, the usual way of handling compensation is by means of a pump. A comparison of the two methods shows many points of advantage in favor of the former. A pump will not lift water at a temperrture exceeding 212 degrees; a Morehead return trap will. A pump consumes an extravagant amount of steam to do a very little work. For example, an ordinary duplex boiler-feed pump requires from 90 to 120 pounds of steam per horse power hour. A common slide valve engine seldom consumes less than 40 pounds per horse power. The pressure is admitted to the surface of the water, and is automatically shut off before the tank is empty. The steam used is only such as is condensed by the latent heat passing from it into the water in the tank, which is all put back into the boiler.

A Morehead return trap, it is claimed, requires practically no attention; needs no lubrication; will not race or run away; is noiseless; requires little room and no foundation.

Full information, prices, etc., of the Morehead return trap may be obtained by addressing the American Blower Company, of Detroit, Mich., or any of their branch offices.

NEW CATALOGUE OF MARINE MACHINERY.

The Marine Iron Works, Station A, Chicago, Ills., have just issued a new illustrated catalogue of their product, which will be sent free on request. This company makes an exclusive specialty of designing and building modern marine machinery (steam only) suitable for vessels ranging from 30 to 160 feet in length, and within their range of sizes the line is very complete, covering paddle-wheel as well as screw propeller machinery, condensing or non-condensing, for either salt or fresh water, as may be required. The large line of marine boilers which they build includes the Roberts safety water tube, also the better class of shell marine boilers, and for either hard coal, soft coal or wood fuel as desired.

Their new catalogue illustrates and mentions thirty-five different sizes and types of screw propeller engines and thirty-six different paddle-wheel engines, all of modern type. Fifty different sizes and types of marine boilers are listed.

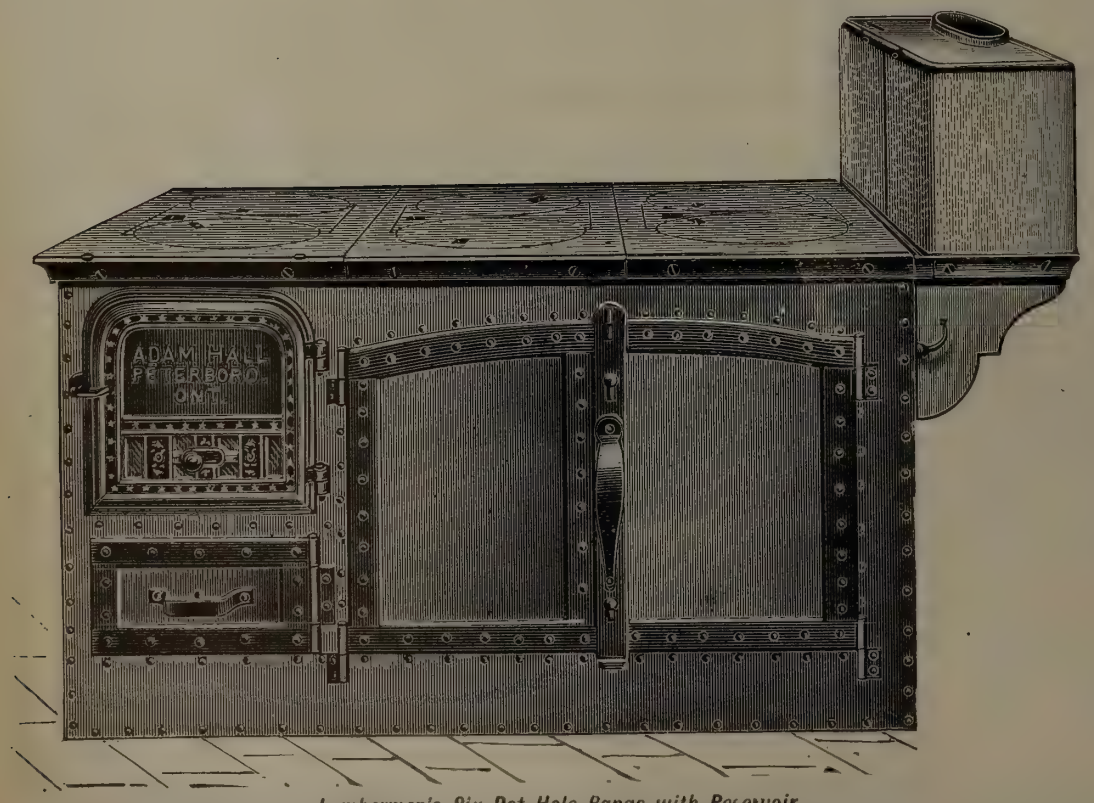
STEEL RANGES

For Lumbermen's and Railway Camps, Boarding Houses and Hotels.



Lumbermen's Six Pot Hole Range with Reservoir.

The Lumberman Heater

36 Inch Lumberman Heater
42 Inch Lumberman Heater
48 Inch Lumberman Heater

This Heater is used in heating Lumbermen's Camps, Boarding Houses, School Houses and large buildings.

The body of the Heater is made of Heavy Boiler Plate. The ends are made of Heavy Cast Metal, with a large Fire Door.

It is a perfect Heater, and very durable.

We have been manufacturing Steel Ranges and Heaters for Lumber Camps for the past Twenty-four Years, and have supplied the wants of nearly all the Lumbermen in Quebec, Ontario and Manitoba—they are unexcelled for Baking and Cooking, and are strong and durable.

This No. 10-25 Range with 25 Gallon Copper Reservoir is the one we sell the most of, owing to the convenience of having a supply of hot water at all times Will cook for 50 to 60 men. Weighs 450 pounds.

Write for Catalogue and Price List.

LUMBER PILING BY-LAW.

As a result of recent fires in the city of Ottawa, claimed to have started in the lumber yards, the city council have passed a by-law to prevent the piling of lumber within the city limits and stipulating that the owner or occupant of any premises where lumber is piled or stored shall remove the same outside the limits of the city within six months of the passing of the by-law. The by-law grants permission, however, to any manufacturer or retail dealer in lumber to maintain a lumber yard within the limits of the city and to pile or store therein not more than 500,000 feet of lumber, provided that such yard shall be surrounded by a close fence not less than six feet high and that the entrance or entrances to such yard shall be provided with gates which shall be securely locked and fastened at night and at any other time when the yard is not being used, and that the lumber within such yard shall be piled or stored not less than 33 feet distant from any other property.

Referring to the by-law Senator W. C. Edwards stated that of all the fires that have taken place in Ottawa only the one which occurred on May 10th was directly attributable to lumber. Had the city waterworks been in good shape on that day, he contended that the fire would have been extinguished before serious damage had been done. There seemed to be an impression that Ottawa would be immune from fire if the lumber were removed.

Mr. J. R. Booth is said to be considering the removal of his saw mill from the city as a result of the new by-law. This is considered a serious matter, as his employees now number nearly 2,000. It is possible that Mr. Booth will secure outside piling grounds at such a point that the lumber may be carried to the yard by rail.

TO ARREST THE MILL MEN.

We are credibly informed that the city attorney of Everett will arrest all mill men of that city who continue to dump sawdust into the waters of Puget Sound, as the United States government has recently demanded through Major Millis, of Seattle, that they stop it. There has been a great deal of trouble lately with the mill men from Maine to Washington, about what they shall do with their mill refuse. Already several are defendents in suits at Everett and Seattle, and the Maine lumbermen, along the Kennebec river and its tributaries, are having equally as hard a time with the authorities.

In addition to committing a nuisance these manufacturers are absolutely wasting their sawdust, when they might be running their mills with it by putting in the Gordon Hollow Blast Grate. As this grate is sold on approval after thirty days' exhaustive trial, and as, moreover, its value is demonstrated by the fact that there are over 2,000 sets in daily use, it would be well for those interested to obtain full particulars from its manufacturers, the Gordon Hollow Blast Grate Company, Greenville, Michigan.

INMAN POULSEN & CO.
Oregon Pine Lumber.
Annual Output 75 million feet.

PORTLAND, OREGON, January 8th, 1903.

ZIMMERMAN - WELLS MACHINERY CO.,
Portland, Oregon.

GENTLEMEN, In reference to your inquiry regarding the workings of the Ray Patent Steam Feed purchased from you about eighteen months ago, we have this to say regarding the feed, that it certainly is not only the best feed that we have ever used, but undoubtedly has no equal to-day on the Pacific Coast.

We have dropped as high as twelve 24-ft. 1" boards in one minute. In doing this, the carriage would have to travel about 650 feet and stop and start twenty-four times in one minute. The weight of the carriage, head blocks, and log would be about ten tons. This would give you a pretty good idea of the Power exerted by the feed in handling a load of that size at such a velocity.

We have run this feed night and day since we have had it, continually, and the same ropes are still in service that were put on when the feed was mounted. Everything about the feed seems to be in as good condition to-day as the day we got it. We would not take it out and put back our old feed for ten times the cost of the new one. You will see that we are more than pleased with it.

Yours truly,
INMAN POULSEN & CO.

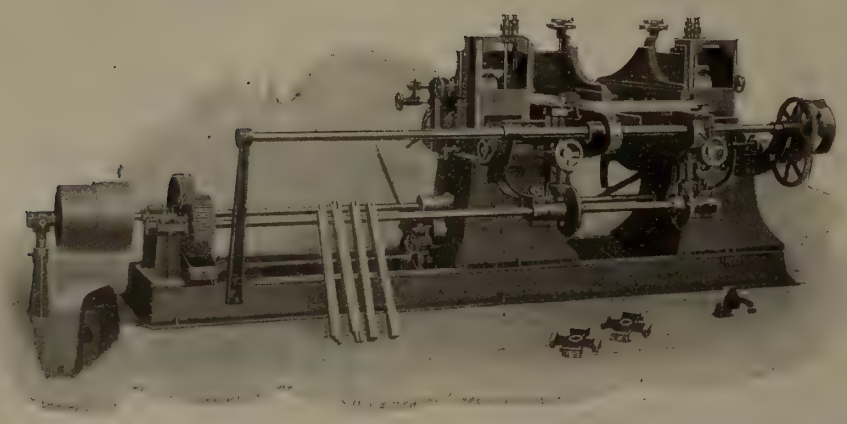
Detachable Chain Belt
—AND—
CONVEYING MACHINERY

William R. Perrin & Company
TORONTO, CANADA.

The first of its kind on the market. New and original and first introduced by us
E. B. HAYES MACHINE CO., Oshkosh, Wis.



When a new and improved machine that has great merit in it like this one, is put onto the market, often times other machinery manufacturers will recognize the fact that it will be a good seller and they will try and start in to copy, of course providing they can do it. We expect it may be the case with this machine, but we know that all the mill men purchasing machines will want the Original, for many mill men in the past have met with great disappointment in buying copied machines. Write for full information.

OVER 35,000 IN USE
IN EVERY KIND OF TIMBER

THE ONLY SUCCESSFUL
INSERTED-TOOTH SAW

THE TWENTIETH CENTURY SAW

Our Chisel-Tooth Saw is adapted to all kinds and conditions of sawing, and does equally well in hard or soft woods, winter or summer, large or small mills.

It increases the output of the mill, requires less power and makes better lumber at less cost than any other saw.

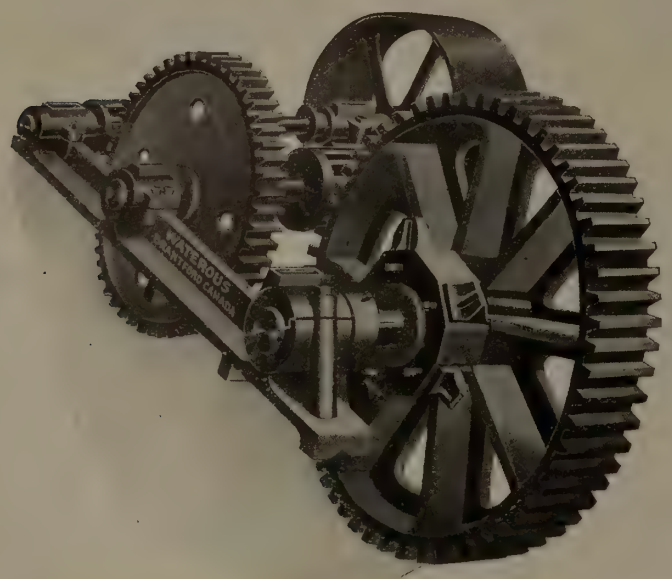
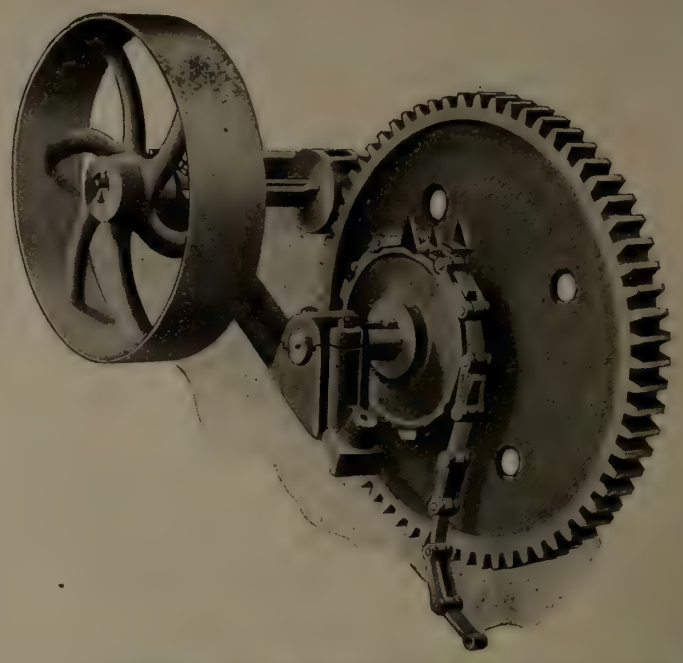
ENDLESS CHAIN BULL-WHEELS OR LOG JACKS



WATEROUS NO. 0 DOUBLE-GEARED LOG JACK

With spur gear to drive from shaft running across mill.

When needed to drive from shaft running lengthwise of mill, we replace smaller spur gears with bevel gears or frictions placed outside of iron frame.



WATEROUS NO. 1 SINGLE-GEARED LOG JACK

With No. 86 log chain. Cast steel spurs and centre links, steel side links, 6″ pitch. No. 80 log chain is the same style but heavier with drop forged center links, 8″ pitch.

PULLEYS CAN BE READILY REPLACED BY STRAIGHT FACE FRICTIONS.

Cable Chain with Cast Iron Log Spurs

Chilled wearing shoes 4x12″ on each side round link. Made 10″, 12″, 14″ wide for 1″, 1¼″ and 1½″ chain. Can't turn on chain.

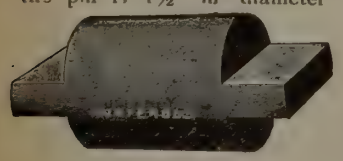
No. 86 Steel Chain (Cast Steel Log Spurs).

Rivets ¾″, side bars 1¾x⅝″, 8″ pitch, center (cast steel) 2¼x6″ pitch. Spurs 9″ point to point.

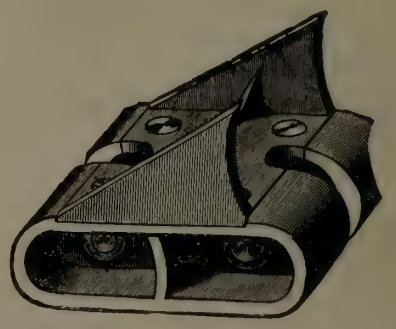
No. 80 Steel Chain

Is 8″ pitch similar to above, except that solid link is a drop steel forging, the pin is 1½″ in diameter (like illustration) and is fixed in position connecting side bars, presenting a large wearing surface for solid link. Side bars 2x1½″

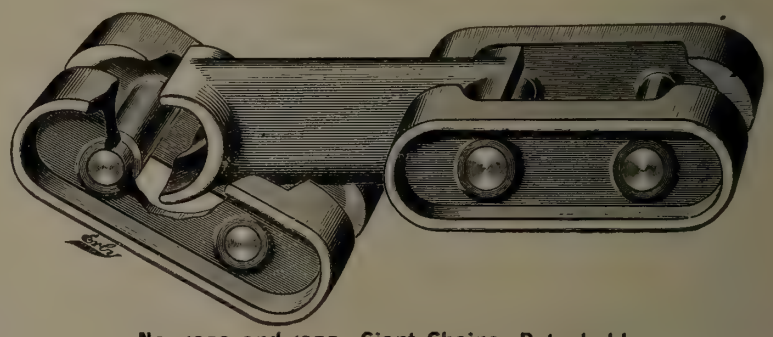
Taking a safety of 4½″ this chain gives a 10,000 lbs. working strain. Log spurs same as No. 86 or of heavy forged steel, any spread desired.



PIN OF NO. 80 CHAIN.



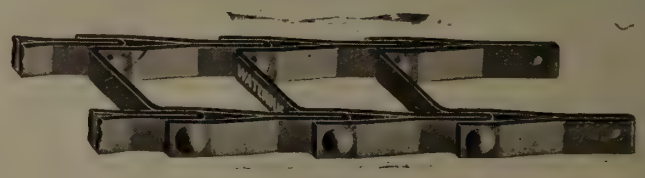
Malleable Log Chains—Detachable, readily applied.



No. 1050 and 1075—Giant Chains, Detachable.

Not recommended for salt water—but there is no better chain for fresh water.

Forged Refuse Chains



R. Double.

Outside width 12½ in.—Made of 1½x⅜ in.

The 10 to 15 Tons of Ewart Detachable Link Belting we carry in stock insures prompt shipments.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

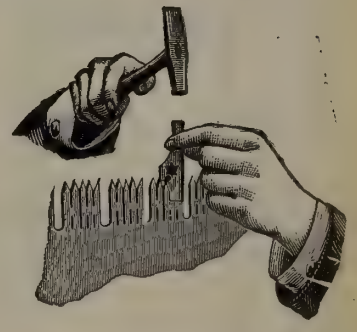
Maple Leaf Saw Set

MANUFACTURED BY

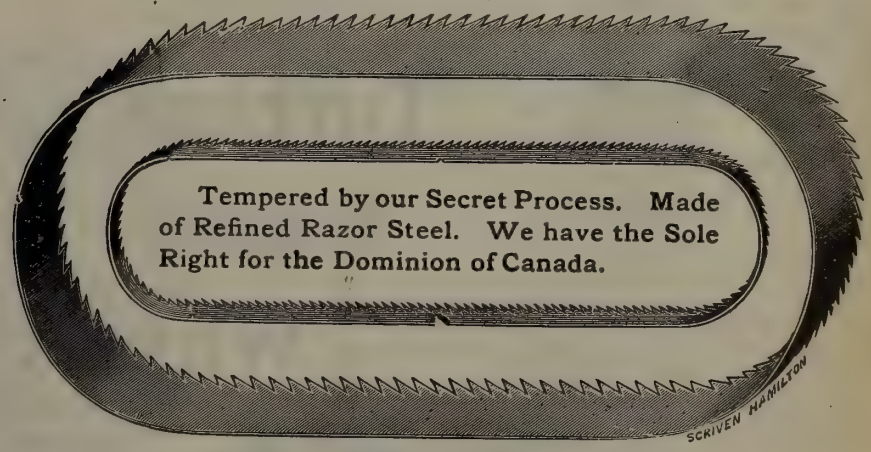
SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**



We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

Watson's Portable Air Tight Baker

The most convenient stove ever constructed for use in the Woods, on the Drive, in the Camps. Bakes as perfectly as the finest range.

Read What Experienced Woodsmen Say of it:

"We used your Portable Woods Baker all last season with a crew of men in the woods, travelling from place to place. We found it convenient to handle and the best steel range cannot beat it in baking. It is a perfect baking oven and a success in every way.

The cooking is not affected by rain or weather and can be used outdoors or in a tent."

Yours truly,
MENOMINEE RIVER BOOM CO.,
Per Wm. H. Stephenson, Gen'l Supt

We make these stoves in three sizes. Our No. 10 will cook for ten men; our No. 20 for twenty men, and No. 50 for from fifty to one hundred persons.

We want those interested in a stove of this kind to write us for full description and prices.

Manufacturers of All kinds of **Saw Mill Machinery, Boilers and Engines**

The World-Famous "TOWER" Line of Edgers

1,000 IN DAILY USE.

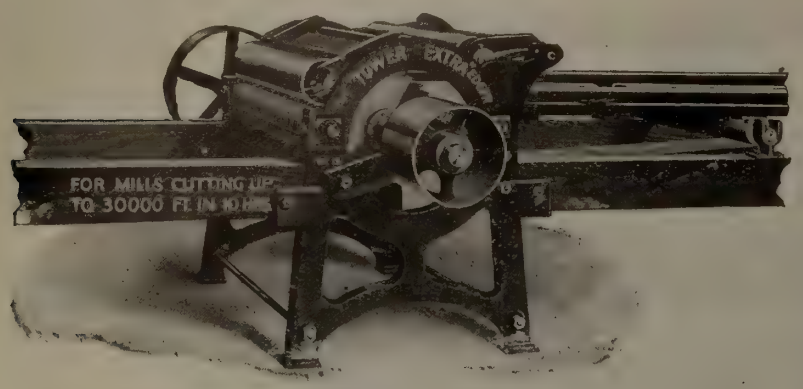
MADE IN TWO SIZES, AS FOLLOWS:

The "TOWER" 2 and 3-saw Edgers, Improved.

For Mills cutting not to exceed 20,000 feet in ten hours.

The "TOWER EXTRA" 3-saw Edger.

A larger and heaver edition of the "TOWER," for mills cutting up to 30,000 feet.



1. They take up little room.
2. They require little power.
3. The feed rolls are adjustable in FOUR directions, which means absolute accuracy.
4. The saws may be removed easily and quickly, without disturbing the arbor.
5. The mechanism for shifting the saws is up-to-date, convenient and positive.
6. The vital parts are carried by a substantial iron husk resting solidly on the floor.
7. They are pre-eminently practical.
8. There is no edger made approaching them in cheapness.

"The No. 8 'TOWER EXTRA' Edger bought of you in January is immensely satisfactory."
KEO SHINGLE CO., England, Ark.

The "TOWER" One-man 2-saw Trimmer.

With this trimmer one man can easily trim the output of a mill cutting up to 30,000 ft. in ten hours The shifting crank being secured to one of the chain carriers, the operator shifts the saws as he walks toward the board to be trimmed, thus performing two operations simultaneously. This saves time.

There are two feeds, easily and quickly started, stopped or changed, with out stopping the saws One lever controls both feeds.

THE DODGE SPLIT FRICTION CLUTCH HAS TEN EXCLUSIVE POINTS OF MERIT.

If you purchase the Dodge Split Friction Clutch you will have every desirable end attainable in friction clutch building in your own hands..

Positive in friction, simple in construction, embodying the split feature and of reasonable first cost, the Dodge Split Friction Clutch runs in perfect balance, is always easy of adjustment, has a liberal clearance, is easy of repair, has detachable sleeve and is provided with excellent lubrication.

Most of the large power users in the Dominion use Dodge Clutches and before you buy you'd best see these clutches doing in actual performance everything that is claimed on paper for every or any clutch

MODERN PLANING MILL ESTABLISHMENT.

Not long ago a fire in the city of Hamilton destroyed the mill of The M. Brennan & Sons Manufacturing Company, Limited. In the place of the old mill has risen a modern structure that is a credit to the company as well as to the city in which it is located.

The Brennan Company have three yards in Hamilton, employing 75 men, and paying out in wages alone nearly $32,000 per year. They also have saw mills situated at Rainy Lake, Cache Bay and Spanish River, whilst over two million feet of pine logs were taken out at Tioga during the past season.

The main building of the new mill is 120 x 120 feet, with a dry kiln 35 x 60 feet, and a shavings vault 30 x 30 x 40 feet. The chimney is 90 feet high with a 16 foot base, tapering to 4 feet at the top. In the sheds and yards are carried over five million feet of pine and hemlock lumber. The splendid improved burner erected on the premises was built from plans published in the last October number of this journal. The company are highly pleased with the burner and claim they have one of the best in existence.

PLANING MILL OF THE M. BRENNAN & SONS MANUFACTURING COMPANY, HAMILTON.

Inside the mill are seen a varied lot of up-to-date machinery, including McEachren exhaust fans, S. A. Woods matchers, pair of Kelly twin engines of 125 h. p. capacity, Goldie & McCulloch surfacers, Otis freight elevator, Greenlee Bros'. relishers, sash stickers, double tenoners, mortisers, shapers, combination and band saws, Jackson & Cockrane sanders, sash joiners, jig saws, boring machines, sash, door and blind machines, etc.

The splendid building is of brick and contains a Goldie & McCulloch vault, with wash rooms and other conveniences for the workmen. The whole is fitted throughout with electric lamps.

Whilst going through the mill our representative was struck by the immense timber and pneumatic hoists in sight and was informed that they were for a large order connected with the new Deering works at Hamilton.

The company are to be congradulated upon the progress made. We have pleasure in giving a view of the Brennan planing mill, also one showing a portion of one of their yards.

J. R. H.

RAILWAY TIES AND THEIR TREATMENT.

At a recent meeting of the Rocky Mountain Railway Club, Dr. Von Schenck, of St. Louis, delivered an interesting address on "Timber Preservation." Among other things he said was the following :

Abroad, the ties are stacked and dried before being treated. The time varies considerably in the different countries, but is never less than four or six months. This, however, is usually dependent upon the demand for ties. At the impregnating plant of the Great Western Railway, England, the ties are allowed to season for six months before treating with creosote. The Eastern Railway, of France, allows from fifteen to twenty months for oak, and six months for beech. They have found out by long experience that it is absolutely necessary that the ties be thoroughly dried out before submitting them to treatment. The piling of the ties so that large air spaces are left around them, gives good air circulation, and thus helps greatly in the evaporation of much of the water. This long seasoning before treatment, almost universally practiced abroad, is one of the greatest factors leading to successful impregnation with methods employing pressure. Its value can hardly be questioned. The seasoning after treatment is fully as important, and perhaps more so. This is a feature not sufficiently attended to in this country, and yet it is almost as vital as the impregnating itself. During this seasoning process the water or volatile substances in the wood are given an opportunity to leave the wood under the most favorable circumstances. When once placed in the soil in contact with moisture, the water in the wood has no opportunity of evaporating. In the case of a soluble salt, this leaches out with the greatest rapidity from wet wood, while dry wood is penetrated more slowly by water, and consequently lasts longer. The drying of ties before placing in track might be attended to with excellent results in this country, where no subsequent treatment is given to the timber.

The universal use of different impregnating systems in Europe has brought many of them to a high state of perfection. In England and France engineers believe that their system gives them the best results, and they use —especially in France —as much of the impregnating material as the timber will hold, saying that the extra first cost is amply paid for by the increased length of life. As has been pointed out this system, which costs from 45 to 80 cents, pays with a tie which costs from $1 to $1.40. They know that with this system of impregnation they get about thirty years' life out of their timber.

In many other countries where the price of timber is not so high, cheaper systems of impregnation are in use, and will continue to be used. Zinc chloride has given good results on some lines, even if it does leach out. Copper sulphate has done so likewise. The new Hasselmann treatment gives promise of good results, and is worthy of more extended trial.

The striking features about the impregnating work as now carried on in Europe may be alluded to again here. They are :

(1) Seasoning of ties before treatment.

(2) Strict inspection of ties and chemicals used.

(3) Injection of larger amounts of chemicals than are used here.

(4) Seasoning of the treated ties before placing in track.

(5) Care in all stages of treatment.

THE UTILIZATION OF WASTE AND BY-PRODUCTS.

In the last census report of the United States is an article by Henry G. Kittredge, a part of which is of greater or less interest to the lumber trade. He goes into details as to the various uses that are made of what was formerly thrown into the waste pile at the saw mills, and tells of other articles of commerce that are now extracted from or made of wood that was formerly considered of little or no value. The article is in part as follows :

Nothing in the arts of manufacture is more indicative of economic efficiencies than the utilization of products that have been rejected as wastes or residues in the industrial processes. The acme of industrial economy is the profitable employment of every atom of material in whatever form it may be presented or however obtained. Every particle of an organic or inorganic substance has a useful part to play in contributing to human necessities or pleasures, and when it performs no function toward some useful end, or remains dormant, it shows that the ingenuity and enterprise of man have not reached their fullest development, or that the arts of the laboratory have not revealed all the secrets of nature. The refuse of to-day is a source of profit to-morrow ; and this has been going on for years and probably will be going on for years to come, notwithstanding that even now there is little that is thrown aside as absolutely useless, except as it may be utilized in the economies of nature. New revelations and new uses are constantly being found foor substances of all kinds, whether in their original forms or in their changed forms, due to outside agencies. The world's increment of wealth is largely dependent upon finding new and more economical uses for materials, however exalted or humble they may be in the industrial scale, and especially the elevation of the humble to a higher plane of appreciated usefulness. If a thing is unused for man's enjoyment, it is because it has not yet found its place of utility.

VIEW IN ONE OF THE YARDS OF THE M. BRENNAN & SONS MANUFACTURING COMPANY, HAMILTON.

Nearly all of the formerly waste products of lumber and timber are now turned to some utility, and some of the new products thus formed are of considerable value. Of this latter class may be mentioned sawdust, which was formerly considered an absolute waste material, and was allowed to float down the stream or was thrown into a heap where it could be most conveniently disposed of. French cabinet makers have found a way of preparing this material which gives it a value far above that of solid timber by a process that has been in vogue for at least twenty-five or thirty years, combining the use of the hydraulic press and the application of intense heat. By this process the particles of sawdust are formed into a solid mass capable of being molded into any shape, and of receiving a brilliant polish, and possessing a durability and a beauty of appearance not found in ebony, rosewood or mahogany. This product is known as "Bois durci." Artificial woodwork, therefore, seems to have a promising future. Alum, glue and sawdust kneaded with boiling water into a dough, and pressed into molds when dried, is hard and capable of taking on a fine polish. Ornaments of great beauty can be made from it very closely resembling carved woodwork.

The production of acetic acid, wood naphtha, and tar from sawdust is one of the latest enterprises in Norway. A factory has been started at Fredrikstad capable of distilling 10,000 tons of sawdust in a year. It also manufactures charcoal briquettes, which are exported to the Netherlands. The acids are chiefly placed on the German market, while the tar is mostly consumed at home. The factory is said to be the first of its kind erected in that country. According to an English patent of 1897 sawdust may be so prepared as to be non-inflammable, and then applied to jacketing of boilers and other purposes.

In the Journal of the Society of Chemical Industry for 1898 is described a series of experiments for obtaining alcohol from either coarse or fine sawdust, without affecting the yield. It was found that pine sawdust, as compared with fir sawdust, was superior, as yielding a purer alcohol. It was also found that a high yield of sugar was obtained from birch sawdust, the yield of sugar being about 30.8 per cent. of the quantity of birchwood used. The quantity of alcohol obtained from 220 pounds of air dried sawdust (20 per cent. water) was 7 to 8 quarts. The quality of the alcohol distilled from the fermented liquid was said to have been excellent and the preliminary experiments indicated that the trifling impurities found in it could be readily removed.

A patent taken out in England in 1896 for utilizing certain waste products of wood describes a process of constructing or manufacturing a product resembling wood from a mixture of sawdust or wood refuse and certain quantities of gums, resins, or other suitable agglutinants, either in a dry state or dissolved, the compound being subjected to pressure at a temperature sufficiently high to soften or melt the gums or resins.

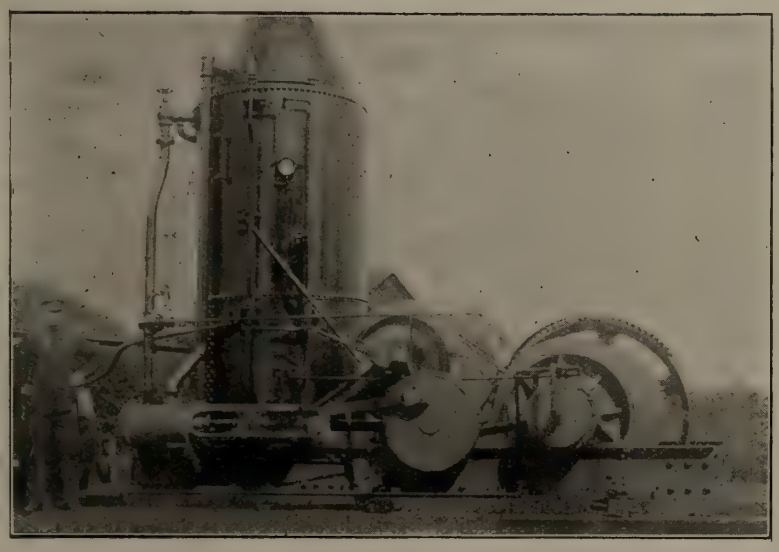
According to the United States census of 1900 the amount of sawdust used in the clay and pottery industry of this country cost $19,687, or 0.17 per cent. of the total cost of all the materials used.

The utilization of wood pulp in the manufacture of paper is not new, but its increased use is very marked, as will be seen by comparing the statistics of the census of 1890 with those of 1900, in the amount of raw materials used in the manufacture of paper. Early in 1826 the brothers Cappucino, paper makers of Turin, discovered a means of supplying the need for paper making material, caused by the scarcity of rags in the fabrication of paper, by substituting the thin bark of the poplar, willow and other kinds of wood. The good quality of the paper made from this material was recognized by the Academy of Science, after an examination of the manufactured product, and so important was the discovery considered that the king granted the brothers an exclusive privilege for ten years for the manufacture of paper from ligneous materials. In 1833 a patent was granted in England to J. V. Desgrand for making paper and pasteboard from wood reduced to a state of paste. Poplar wood was thought at that time the best for this purpose, as it had been in Italy twelve years previous. A patent was granted in 1855 to William Johnson for improvements in the application of various substances containing wood fiber, as the best, or inner bark, of the lime tree, the willow, birch and alder, to the manufacture of wood paper pulp. At the London International Exposition of 1862 Wurtemburg contributed several samples of paper made from wood pulp mixed with rags, the proportion of the former varying from 10 to 80 per cent.; and the paper was reported to be serviceable, although of a low

grade. The wood was simply rubbed down into a pulp against the periphery of a wheel prepared with a rough face. At the Paris exposition, 1867, was to be seen in action a large machine of 50 horse power for making wood pulp for paper. Only whitewoods were thought to be available for the purpose.

LARGE LOGGING ENGINE.

The accompanying illustration represents what is said to be the largest logging engine yet turned out in British Columbia. It was manufactured by the Vancouver Engineering Works for the British Columbia Mills, Timber & Trading Company. The engine has cylinders of 10 inches in diameter and 15 inch stroke. It is very strong throughout, the frame being built up of 15inch steel I beans. The main drum has a capacity of 1½ miles of ⅞ cable and the haul-back drum a capacity of 3 miles of ⅝ cable. The boiler is 60 inches in diameter by 132 inches high and carries a working pressure of 150 pounds of steam. The front drum of the engine is fitted with the NcNair patent device for setting the friction. The weight of the engine is about 17 tons.



LARGEST LOGGING ENGINE YET BUILT IN BRITISH COLUMBIA.

CARE OF BOX MACHINERY.

Regarding the care of box machinery, a writer in the Woodworker says :

I recently suggested that some improvement could be made to a surfacing planer by having two cutting heads on the top of the smoother—two cylinders of two knives each, instead of one cylinder of four knives, with the front one raised a little so as to divide the cut between the two heads. This I suggested for two reasons : First, because it would give us four driving belts instead of two, which would insure against choking down when a lumpy board came along, and second, because the front head would then get the bulk of the dirt and grit from the board, making it easier to keep the back cutter in shape for smooth finishing than would be possible if there were but one head on the machine.

A question which came up was in relation to the bottom cutter ; a reader wanted to know what was to be done with that part of the machine.

If you follow closely the passing of stock from the yard to the sawing machine, you will find that quite a general practice is to do the resawing first, and then run the boards through the surfacer. Further, when those boards go through the planer they have this freshly-sawed part turned down, and the dirty and lumpy work comes to the top cutters, where I suggested doubling up. Also, it is not at all unusual to not only turn the freshly-sawed side down, but to also let it go at that without any planing at all, so that the case is rather frequent where only one side is surfaced at all, and that is almost always the top side. Then, if it should be desirable at some time to run thick stuff and surface both sides, the top is where the burden of cutting in case of uneven thickness rests, for the board is held firmly in relation to the bottom cutter by the platen and feed rolls, and there can be no variation of the cut there during the running of a board, no matter what it may vary in thickness. I repeat, then, my suggestion that some improvement could be made in the ordinay smoothing planer practice by having two cutterheads for top surfacing and distributing the work of four knives to two heads and four belts, instead of one head and two belts.

This year there is particular need for the very best of facilities for matching up of box boards. I do not mean the tongue-and-grooving, but the fitting together at the saw table of such widths as are required to make up a box side, for the scarcity and high price of lumber has led to the use of smaller pieces of scrap, and has practically doubled the work in this line. While it is all right to save timber, and some might well have learned the lesson sooner, it is well, too, to see that it is saved without costing more in labor expense than the timber is worth. I have seen a man stand at a little table rip saw with his gauge set for the width that it was desired to make up, which might be of any number of pieces, and when a piece came along that had no good edge to work from he would slide it alongside of the saw and trim it on one edge, trusting his eye and his hands to get a straight, even cut. Now, no matter how good a man's eye may be, or how deft his hand, it takes up some time to do this, and it cannot be as satisfactorily done even then as it would be if there were some guide for the work ; besides, there is an element of danger in this work that might as well be reduced.

For doing work of this kind one should have a saw frame with that part outside the saw line sliding like a carriage, and if he has not he should work one of his table saws over and get some kind of a sliding arrangement here. Let the inner part of the frame, where the gauge is set, and where the box side is cut to size, remain as it is if desired, but be sure and get some sort of a carriage on the outside of the saw so those pieces that have to have an edge trimmed can have it done in a business-like and satisfactory manner. When the thing is once tried the advantages will soon become apparent. Another thing worth trying on these little table saws is, if you have a wooden top try covering it with sheet steel; it will not only make a better working surface, but it will also insure a long life to the table top.

When you refit those little saws, do not get the idea that they are good for an indefinite period of service without attention, and leave them at that, for they require certain small attentions every day, which, in the aggregate, are of as much importance as the refitting of the machines themselves. Do not think they will run if the operator will only squirt a little oil at them semi-occasionally, but see that they are provided with oiling facilities, and then see that they are oiled regularly. I have seen such rigs in operation, and by-and-by have seen smoke rising from the journals ; the result would be from two hours to half a day's time lost that need not have been if they had been anything like properly lubricated.

Not only is it of importance to give attention to the oiling of these and other machines in the factory, but they should be kept from getting clogged with dust and dirt till it is almost revolting to have to examine the interior of the machine. Do you ever get affected with the cleaning-up habit? Do you have the machines in the place cleaned regularly, and try to induce the men to take some interest in the outward appearance of the machinery? If you do not, you ought to try it at once. Do you just let the machines go because you think you cannot spare the time and expense of cleaning up occasionally? If you do, you ought to try a change for luck, and see if what you first looked at as a loss of time does not really prove to be time well spent.

I saw a young foreman inaugurate a plan along this line one time that struck me as being good enough to mention, that others, who have not yet taken up this subject, may get some idea therefrom. The shop was an excellent one, so far as the building itself was concerned, and, as a rule, the floor was kept nice and clean, but the machinery was being run without any set period for cleaning up, which had resulted in leaving most of it in a shape that a cleanly man would abhor.

An idea struck the foreman and he passed around the word to every operator to stop at 15 minutes before quitting time on that (Saturday) evening and devote 15 minutes to cleaning up his machine. Promptly at the time mentioned every man flew to cleaning up his machine and putting things to rights in his individual part of the shop, and the following Monday morning things presented a better appearance than they had at any previous Monday that I had seen the shop.

A copy of the 1903 catalogue of Messrs. Wm. B. Mershon & Company, Saginaw, Mich., entitled "Use an Care of Band Saws," will be furnished to all interested persons upon application. The hints on the care of band resaw blades, and numerous tables, render it a valuable book for reference. The firm make a specialty of band sawing machines carrying extra thin blades.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance....$ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

THE COMMERCIAL OUTLOOK.

The almost entire absence of failures in the lumber trade is proof of the prosperous condition of the industry. The average business is being conducted at a profit and should at the close of this year again show a balance on the right side. The making of large profits, however, has been renderd more difficult, if not impossible, by the increase in the cost of stumpage and of logging. A few years of prosperity were due the lumbermen of Canada, and if the present good times should continue for some years yet, they would bring but a deserved reward for the many years when lumber barely brought the cost of production and more than one business concern was forced into bankruptcy.

What shall be the trend of commercial events in Canada during the next few years is a question that is much discussed. Some predict that the height of prosperity has already been passed and thata gradual falling off in business may be expected. The magnificent showing made last month by the export and import returns does not indicate such a result. Inquiries made of manfacturers of machinery reveal a healthy condition of trade. Some of the largest manufacturers have orders on hand which will take the bulk of their output for twelve months to come. This would seem to indicate confidence on the part of the people, for if they believed a wave of depression was on the road, which would certainly bring with it lower prices for products of all kinds, they would not place orders at the prices of to-day.

"In times of peace prepare for war" is good advice. Periods of depression will doubtless be experienced, and it may be unwise to be too optimistic in respect to even the near future. Nevertheless, it seems extremely doubtful that we shall again witness in the same degree the stagnation to trade which characterized the early nineties, for the development of the resources of Canada has only commenced.

The breach between capital and labor has seemed to widen with the better times, for in no year, perhaps, has the business of the country been more disturbed by strikes. Doubtless the employees have not always been at fault, but on the other hand there have been many instances where labor has made unjustifiable demands. If the aggresiveness of labor organizations is to continue, we see in it one of the surest signs of the return to the hard times and over-stocked labor market of ten years ago.

TREATMENT OF TIMBER.

The hope of an ample timber supply for future generations lies largely in the education of the people to the necessity of preserving and protecting the standing trees. It is not alone in this respect, however, that we can foster our supply, for the treatment of timber in a manner to prolong its life is a most important agency towards perpetuation. So far in this country very little thought has been given to any artificial method of timber preservation, owing to a lack of recognition of its necessity.

To Dr. Martin Murphy, of Halifax, N. S., belongs the credit of endeavoring to awaken the interest of Canadians in the subject. In his presidential address before the Canadian Society of Civil Engineers, he presents some statements which show that it is most expedient to prolong the life of railway ties, wharf piling and other timber by means of creosote or other similar material.

The average life of a railway tie in Europe is about twenty-four years, while that of a spruce or hemlock tie in this country is from eight to ten years. In Europe the ties are treated by creosote, which apparently doubles their life. It would seem to be a fallacy to consider that the ties used in this country could not be effectively treated in a similar manner, thus effecting a very large saving in the consumption of timber.

Dr. Schenck, of the United States Bureau of Forestry, is also an advocate of the seasoning and creosoting of timber. The main advantages of seasoning are that the timber lasts longer, since the water in green timber is necessary to the life of decay-producing fuugi; that it greatly increases the effectiveness of the preservative treatment, and that by reducing the weight of timber it causes a corresponding saving in freight.

An interesting fact, recently discovered, is that high grade timber, such as white pine or oak, is not so readily penetrated by the preservative fluid as is timber of poorer quality. This is due to its greater density.

Reverting again to Dr. Murphy's address, he points out the need of large plants along our coasts for creosoting heavy timber. The cost, he admits, would not be warranted by the amount paid annually for imported creosoted timber, but would be saved many times over by the cost of renewals, which would be greatly reduced by the application of creosote.

The subject seems to be of sufficient importance to receive consideration at the hands of the Government, who in our opinion should undertake experimental tests with a view to convincing the public of the benefits to be derived from the artificial treatment of timber.

BOARD MEASURE.

One might reasonably suppose that a term that is so universally used by the lumber trade as is "board measure" is entirely free from ambiguity as to its meaning. It is only necessary to obtain the opinions of a few persons to find out that its real significance is by no means clearly understood. It has been the subject of litigation on more than one occasion, and it is doubtful whether the meaning of the term in all its applications has yet been clearly defined.

Board measure is based on a square foot 12x12 inches by one inch in thickness. Material thicker than one inch is reduced to the inch basis. Thus a board twelve feet long, twelve inches wide and one and one-half inches thick would contain eighteen feet board measure. The accuracy of the method by which the above result is obtained is unquestioned. The proper measurement of pieces less than an inch in thickness, however, brings up the question upon which opinion is divided. By some it is contended that no allowance is to be made for the deficiency where a board is less than an inch in thickness, that is, that a board twelve feet long and twelve inches wide contains twelve feet board measure even if only one-half inch thick. The American Lumberman holds this view, at the same time pointing out that it is an inconsistency of the board measure system that is misunderstood. On the other hand, so great an authority as Mr. W. B. Mershon, of Saginaw, claims that lumber thinner than 13-16, which is the thinnest standard for dressed inch, must be taken as surface measurement, the price being based on so much a thousand feet surface measure, regardless of the board measure. He argues that if lumber 3/8 or 1/2 or 5/8 inch thick counted for inch stock, a person could buy one thousand feet board measure of 1 1/4-inch lumber, resaw it with a fine resaw and leave it nearly 5/8-inch thick, and he would at once produce 1,600 feet board measure. Mr. Christadoro, the author of a well-known box reckoner, agrees with Mr. Mershon's contention.

Even at this late date it would seem very desirable that a proper determination of the term "board measure" should be made by some high tribunal, for as matters now stand the trade are loath to accept either of the existing definitions.

EDITORIAL NOTES.

Dr. J. F. Wilson, Secretary of the National Nut Growers' Association of the United States, has contributed to the Nut-Grower an exceedingly timely article entitled "Nut Trees for Timber." Dr. Wilson points out that the hickory, chestnut and walnut trees are very valuable for their timber, and will incidentally produce a by-product in the nuts grown, thus making such plantation a profitable investment years before its maturity for lumber. The

excessive cost of hickory, chestnut and walnut lumber is also an argument in favor of planting trees of these varities. With a prospect of ultimate direct and indirect profit and assurance of dividends from such trees during the waiting periods for a lumber harvest, the subject seems worthy of consideration to those who contemplate reforestation.

The veneer door is becoming very popular. The public have learned to appreciate the advantages it possesses and no longer demand the solid hardwood door. In point of lightness the former has a decided advantage, and as the veneer door is now made it cannot warp nor crack. It has been more difficult to introduce hardwood veneer in furniture, but even the prejudice against this is passing away.

Every owner of timber stumpage may feel assured that sooner or later his timber holdings will become very valuable. One by one the so-called valueless woods come into prominence. Just now hemlock is demanding attention as never before. Not long ago regarded as barely worth the time necessary to put it in marketable condition, to-day it is being shipped in deal form to England, and has probably not yet reached its proper status in the timber field.

Considering the large number of persons engaged in the lumber trade of Canada, how little sociability appears to be manifested. In reality there exists as much friendship among the individual members as in other branches of business, but there has been lacking an opportunity of cultivating that friendship. Doubtless it would be found profitable and pleasurable if, as is done in the United States, trade luncheons were held in the cities where a number of lumbermen could assemble. During the present summer let a social function of some sort be arranged which will bring together in a friendly manner the many lumbermen who make their headquarters in Toronto and those at adjacent points who may be able to attend. It might prove to be the forerunner of regular fortnightly or monthly meetings where trade matters could be discussed in an impromptu manner and views exchanged on lumber subjects. The CANADA LUMBERMAN would be happy to chronicle the formation of a lumber exchange in Toronto. And not alone in Toronto is there scope for such an exchange. Wherever a number of lumbermen are located means should be provided of meeting together and profiting by an interchange of ideas.

EARLY SAWYERS AND HEWERS OF SAW-LOGS.

The lumber sawyer and the log hewer were of the utmost importance in early colonial days. There were no saw-mills in New England, nor in New Amsterdam until 1633, and it was many years after this before they became sufficiently numerous to make "pit sawing" unnecessary. So scarce and high-priced were saws that sometimes even pit sawing was impossible, and towns sprung up built of log houses with split shingles, too far in the frontier even to have a board. The town records of a village in Oneida county, New York, show "the first death in the settlement, a child, buried in its cradle, there being no boards to make a coffin."

Pit sawing was done by two men with a long saw that had cross handles on each end. The log was first hewed square and then either placed over a pit dug in the ground or it was elevated on trestles. The best workman stood on top of the log and pulled the saw up, at the same time guiding it along a chalk line. He was called the top sawyer; the other man, less skilled, pulled the saw down and was called the pit man, says M. E. Stewart, of the U. S. Department of Labor, in a recent article.

Top sawyers were paid 33⅓ cents a day in New England in 1630; pit men received 25 cents; or where board was furnished they received 25 cents and 16⅔ cents respectively. When working by the piece they were permitted by "the court" to charge 75 cents a hundred feet for boards "at six score to ye hundred (that is, 120 feet) if the wood be felled and squared for them." If the sawyers cut the trees and squared their own logs they might charge 92 cents for 120 feet. This court regulation did not last long and by 1639 sawyers got $1.08 for this work.

Late in the year 1621 the Plymouth colony sent the small ship Fortune of fifty-five tons burden to England, loaded with hand-sawed "clapboard as full as she can stowe and two hogsheads of beaver and other skins." The value of the cargo was said to be $2,000. This was the beginning of New England's foreign commerce. Virginia had been exporting shipments for some time.

In New Amsterdam the wages of top sawyers was 50 cents and pit men 40 cents a day, and this continued to be the rate of wages in sawmills after they became quite common. Although Manhattan was settled in 1614, the West India Company did not see fit to erect a sawmill until 1633. It is not strange that none was erected in New England until the same year, for there was none in England for over 100 years after this; but the Hollanders in Manhattan must have seen mills in their native land, and so had the Swedes who first settled Pennsylvania. The Swedes had a sawmill before the landing of Penn. The greatest drawback was the scarcity of tools, for even as late as 1792, when the first sawmill was built in Rensselaer county, New York, by a millwright named Cross, he "had no tools but an axe, saw and auger." The wages of millwrights were then $1.50 a day in New York and from $1 to $1.17 a day in Massachusetts.

In a list of articles to be sent to the Dutch colony on the Delaware in 1662 we find the "iron works for a saw mill" charged at "450 florin," the equivalent of $180. A completed mill sold in Massachusetts in 1684 for $337. A sawmill of that value was able to cut about 1,000 feet of boards a day, a day being from sunrise to sunset.

The colonies hedged these sawmill franchises around most carefully. So characteristic of the colonial idea of the rights of the community as against the individual interest are these regulating franchises that one of them is here quoted .Permission was givent hree men by the town of Scituate, Mass., to erect a sawmill. The document is dated Nov. 10, 1656, and the mill must be finished within three months from that date. The regulating clause reads: "That in case any of the townsmen do bring any timber into the mill to be sawed the owners of the mill shall saw it, whether it be for boards or plank, before they saw any of their own timber, and they are to have the one-half for sawing the other half. And in case any man of the town that doth bring any timber to the mill to be sawed shall want any boards for his particular use, the owners of the mill shall sell him boards for his own use so many as he shall need for the country pay (farm produce) at 58⅓ cents an hundred inch sawn; but in case the men of the town do not supply the mill with timber to keep it at work the owners of the mill shall have liberty to make use of any timber upon the common to saw for their benefit."

One peculiarity of these regulations always is that a higher price may be charged to people who do not live in the town granting permission to build; also that work for "strangers" must not be done at this advance price if any townsman wants work done at the lower price.

New York was equally careful to secure favorable rates for the people of the granting town as against outsiders, even where a fixed rate was not named. In 1673 Oyster Bay gave a right to James Townsend "and his heirs forever" to cut and use any timber they found on the commons and sell the lumber to any one, whether in the town or out of it. But Jamaica, a town in the same county, granted in 1675 to Carpenter & Carman permission to erect a mill and use timber from the common land "except clapboard and rayle trees under eighteen-inches, provided they saw for the town 12 pence in the hundred cheaper than any other persons of any other town; and for citizens of the town that bringeth the timber one-half of the sawn stuff for their labor, provided that it is only for their own use." Jamaica did not like the Oyster Bay franchise.

New England seems never to have granted any rights to a man "and his heirs forever." The objection to primogeniture and entail came as ballast in Mayflower. Some of the quaker colonies stipulated in their saw mill franchises that the owners must saw boards for Indians for their own use free of charge.

These mills had but one upright saw, the blades being attached directly to the lowe frame and rendered steady by side pressure from guide blocks. The first mills built both in Manhattan and in New England were driven by wind; later by water power, a rude and small overshot wheel being used.

Hand sawing was by no means done away with by the introduction of these crude saw mills. Many of them would not take a log long enough to make sills and beams, and all the heavy timber continued to be sawed by hand. In the white-pine districts of New York the trees were so large they could not be handled by the early mills.

The Rainy Lake Pulp & Paper Company, whose concession was recently approved by the Ontario Legislature, has been granted incorporation, with a capital of $500,000 and head office in Toronto. The provisional directors are: Hon. Geo. E. Foster and W. J. Elliott, Toronto; William Blackwood, Winnipeg; W. A. Preston, Mine Centre.

THE COST OF WOOD WORKING.*

In this article the desire is to present for the consideration of manufacturers a system which will simplify the keeping for ready reference the cost of the manufacture of any article or set of articles. While a wood-working plant is under specific discussion, it is merely by way of illustration, and it can readily be seen that the principles involved may be carried into any line where system is desired and with the same satisfactory results.

ORDERS.

It matters little what the nature of the article may be, all goods manufactured should be constructed from blank orders which should be furnished to the foreman of each department though which an order passes. The form suggested for this purpose (Figure 1) may be adapted to varied requirements. At the completion of a part of the order in any department it receives the O.K. of the foreman, and is sent along to the next department and so on until the work is finally ready for delivery. This enables the office to at any time learn the exact position of the order without searching through the factory for the desired information. The endorsement of the last foreman having charge of the work should also include the date of the completion of the order.

SUPT.

FIGURE I.

If the order is one necessitating its tranfer from one department to another on trucks, then each truck should bear a job ticket or tag on which should be entered the order number and the name of the article to be manufactured. The tickets should in all cases accompany the order, the number of which could at all times be told by the workman detailed, and foremen should be instructed to refuse to receive any job from another department without the ticket attached.

TIME CARDS.

One of the essential points in the cost of the manufacture of an article is the time a workman consumes in its construction; often it is of far greater importance than the actual cost of material. In order to properly arrive at that point the adoption of a time card is suggested. This card may be printed in the form of the dial of a clock (Figure II). This plan is suggested for the reason that the most illiterate workman is able to tell time, and his only task need be to place a cross in the hour when he begins work on an order, and another when it passes from his hand. Thus the exact time required for work in each department through which it passes may be at once determined. Different forms should be provided for each department, as they differ in the operation, but each should retain the chief points; the order number, job number, date commenced, date finished, name or check number of workman, number of pieces and the name of the article. Cards for the cabinet room would have the possible operations printed along the side of the card, and similarly in all of the departments. The idea which it is wished to convey will be found illustrated.

These time cards should be deposited in pockets attached to each machine and should be numbered according to the machine number in order to prevent confusion. Then when a workman starts a job he has but to enter the job number on a card and cross the time when he commences his work. The illustration (Figure III) shows one of these pockets in use. He enters his name, or, if he cannot write, his check number, runs a line though the operation to be preformed and when through with it makes another cross on the dial. The plan described, as will be seen, also serves as a check on the workman, for the machine number and the name of the operation or department must correspond. For instance, if a shaper was number 26 and the workman crossed out the operation of sawing on a card bearing the shaper number, the time clerk would immediately know that there had been an error made and could trace it. Of course workmen would be paid for the time indicated on the card. The different cards they turn in each day show the exact amount of time worked, and the exact cost of labor can thus be obtained.

FIGURE II.

It is a very simple matter to determine the cost of non-productive labor by computing the cost of the productive labor for a given period in a given department, and dividing the amount thus obtained into the cost of non-productive labor for the same length of time in the same department. To illustrate: Assuming that the productive labor amounted to $1,000 for a given period of time, and the non-productive labor for the same department amounted to $100. By dividing as stated above the result would be 10 per cent. Therefore to the cost of the productive labor add 10 per cent. to cover the cost of the non-productive labor.

CUTTING RECORD.

There should be turned in each day by the foreman of the machine room the exact amount of rough lumber cut. This should include all scrap and waste for each order number.

In keeping a stock record a card should be made out for each kind of lumber, the cards to be filed between suitable guide cards (Figure IV). When lumber is received it is entered on the card in the proper column, noting the date, from whom received and the amount. The daily reports turned in by the foreman of the cutting room should show the amount of stock cut for each order, and from his reports the amount of stock could be entered. When an order is made out in the office the actual net amount of lumber needed for its construction is determined and entered in the proper column. The amount of scrap and waste therefore can easily be determined by a comparison of the foreman's report and the office estimate.

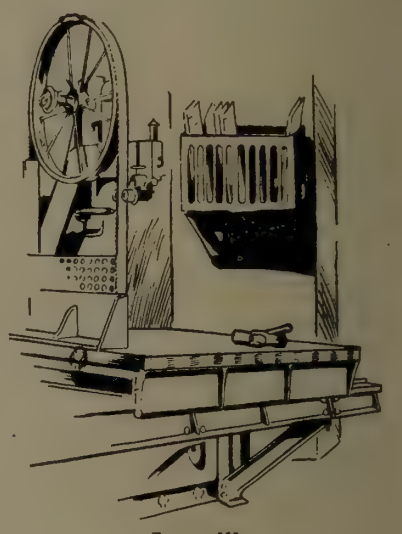

FIGURE III.

In determining the percentage of waste add the various amounts of stock estimated for the different orders and also the amount of stock cut, and the difference will give the amount of scrap and waste together. The superintendent should estimate the amount of stock in the scrap bin. The difference between the stock there and the total amount of scrap and waste divided by the amount of stock cut will give the proportion of waste.

Several entries on the card (Figure IV) serve to properly illustrate this. It will be seen that the entries show that on the orders No. 250, No. 251 and No. 252 the office estimate amounted in the aggregate to 3223 feet. The actual amount of material cut was 4353 feet. The superintendent finds the amount of scrap to be 354 feet. The difference between the amount actually cut and the office estimate is 1028 feet, deducting the 345 feet of scrap leaves a difference of 683 feet, which is properly waste.

The above operation results in determining the cost of material and the 15 per cent. thus obtained is added to the estimate to cover the

*Reproduced by permission from "System," of Muskegon, Mich.

cost of waste, and this will give you approximately an accurate cost of material.

ASSEMBLY CARDS.

It is next necessary to ascertain the cost of the completed article. To do this an assembly card (Figure V) is suggested. The cost of the different operations by department, as will be seen, is entered in the proper column, the operator's name or number and the department, the number of hours employed and the total. Material can also be figured with the value and the cost per piece for material, cost per piece for labor, the shop burden or loss, or according to the name of the article. The cards may be filed in one of three ways, either alphabetically according to the name of the party for whom the order was constructed, numerically according to the order number, or according to the name of the article. The forms can easily be enlarged or contracted to meet the particular requirements of factories of any capacity, and it will apply to any line in the manufacturing world.

HANDLING STOCK IN THE PLANING MILL.

As soon as a piece of lumber is dressed it must go somewhere at once, for the tale man at a machine that is doing anything like a day's work has no time to dally with it very long. If the system is a chain that carries all stock past a grading platform where one grader does all the work, that part of the matter is easily disposed of, and the final disposition is a matter of so much or so little trucking.

In some mills that have a number of machines conveniently in line, it is found to be most profitable to have a chain transfer at the feeding-out end of the machines and traveling at right angles to the delivery of the lumber. This chain, says a writer in The Wood-Worker, takes the finished product past a given point, where it is graded and marked for the stock shed, to which point it is conveyed by trucks, commonly called "dollies," or by a roller or chain transfer to a certain point in the stock shed, where the stock is loaded on trucks of varying form, for final distribution to the cars or to the stock bins to which it may have been assigned.

For the transfer system and the single grader there is this advantage, that there is not at all times the difficulty of finding a number of graders at higher wages than are paid to the laborers, and it also has a tendency to make the grades more uniform. There is also this advantage, all the trimming is done at the one saw at the grader's stand, and it is done right under his eye, so that the tendency to waste can be checked.

The final disposition of the dressed stock has to be made on the trucks, as no system yet devised has been able to handle so great a variety of sizes and grades and do it without the help of trucks of some sort. The shape and construction of these trucks vary in almost every locality, many mills yet using the old two-wheel "dollie," with all its unhandy features. There are many of them in the pine mills of the south, for no other reason, in some cases, than that they are considered "nigger" proof.

From an extensive experience I prefer the factory truck with removable standards to any other, for ease of handling and low first cost. A number of them can be placed convenient to the grader and all the bundled stock put on a truck, with each grade separate, while a fair-size boy can roll 500 feet on a level floor. Then there is this other advantage that the stock is never allowed to touch the floor, an advantage that contributes no small share toward lessening the cost of handling. These trucks can be handled in as small a space and around as sharp a corner as the "dollie," and have the added advantage that they will not upset nor tip up on the end when loaded, as the higher "dollies" are so prone to do. Where the lumber is bundled for shipment, these trucks are even more of a convenience, as the bundles can be loaded higher on a given platform space on the frame without sticking and are in no danger of being shaken off in the rolling of the truck Once used they are seldom discarded.

In the case where there is a grader at the several machines (and that system is by no means discarded) these little adjuncts to the success of a mill are especially valuable, as they furnish a ready means of transporting assorted quantities of lumber in a more compact and cleaner shape than by any other means. In case of necessity these trucks offer a sort of portable warehouse, holding their contents securely, yet ready for a quick movement, and taking very little room.

I have watched a number of systems of the transfer sort, and except for the saving effected at the grading end, there is not much to commend them over the trucks, and the trucks have to form no inconsiderable part of most transfer systems. In a number of instances I have seen lumber graded in the rough and loaded on the cars from the machine, without further grading, except in the case of a board getting accidently spoiled and laid aside. That does not seem to me to be a good system for anything else than plain surfacing or resawing where the lumber is shipped pile run and there are no culls to be laid out. For machines that work on stock from which orders are to be selected as they come in, this will not answer. It is in a case of this sort that the little trucks show their value.

FORESTRY METHODS.

The last report of the New York State College of Forestry contains some pertinent remarks by Dr. B. E. Fernow, the Director, in respect to the planting of hardwoods in the Adirondacks. He says :

There is one fact on the silvicultural side which the experiment has demonstrated to the satisfaction of the writer, namely, that in the hardwood forest of the Adirondacks, where the pine and spruce have been severely culled, the only practicable method, both from financial and silvicultural points o' view, of securing a desirable new crop, is a clear cutting system, followed by artificial regeneration of the conifers, leaving only enough of the hardwoods to produce an admixture by natural regeneration, and saving only so much of the promising volunteer growth of young hardwoods and conifers as is not liable to be thrown by the winds. Indeed, it may often be best to make a clean sweep—denude, though the word has been used to denote vandalism—and replace artificially without reference to existing volunteer growth. This planting, of course, costs ; it is an investment for the future, but one that can be easily shown to be profitable in the long run. This method cannot be practised without taking care of the rubbish resulting from the logging operation, and this, of course, again entails expense. But when the simple and efficient system of clearing, followed by planting, is practised, the debris can be buried more cheaply, using the early spring season, before the snow is quite gone, and thus the fire danger, always attending logging operations, can be most readily reduced. The forest management has, indeed, by close watching, so far been fortunate in avoiding this constantly threatening danger. Here, too, the management needs financial assistance to increase means of prevention of forest fires, at least of the young plantations which are to replace the old crop. The annual logging area comprises between 500 and 800 acres, of which probably at least one-half will require replanting, and on these areas special precautions to ward off fire are necessary.

HOOKS IN BAND SAWS.

The more hook the greater the cutting ability of the band saw and the less motive power is required. Too much hook could not be given a saw if the question of cutting is alone considered. What makes the excessive hook detrimental or hazardous to the safety of the machine is the tendency for teeth with extreme hook to feed too rapidly. More hook can be given to the circular than to the band, as the circular, being round, has a tendency to throw or push the stock from it somewhat, irrespective of the hook. But the band saw, acting at right angles, has more of a tendency toward it. In the case of a band saw with no hook, the action of the teeth would not be so much one of cutting as of scraping or splitting.

Hardwoods require less hook than soft woods, and of the soft woods those that are stringy or fibrous require the most hook. Some of the most successful saw filers make no distinction in hook in cutting hard or soft woods, but run the same tooth with apparently equal success. In general practice, however, the hook used on saws for hardwood is from one-fourth to one-third and in rare cases one-half.

As regards the efficiency of the saw in different woods, a good deal depends upon having the saw fitted with proper swage and side-dress, kept properly sharp, properly slim and throated, and the feed not too fast. Very thin band saws are run successfully in re-sawing the hardest wood, such as kiln-dried oak, etc., but the teeth must be finely fitted, and the stock properly fed.

The action of saw teeth is identical with that of a chisel, and just as a woodworker learns to present his chisel at the right angle to the wood, to cut the best, so must the saw fitter learn at what angle his saw teeth are best calculated to cut, as regards hook. There should be no such thing as scraping or tearing, through imperfect hook or dullness. A dull saw takes much more power than a sharp saw, because its operation is not clean-cutting.

There is a general tendency on the part of band saw filers to run more hook in their saws. This may be done without impairing the strength of the tooth to the extent that it will chatter or vibrate in the cut by allowing the hook to run down the face of the tooth about a quarter of an inch, and then drop away from the hook line on a gradual curve, forming a nice, round throat, which enables a saw to cut easily on big feed.

The back of tooth must be made sufficiently full or rounding to give plenty of strength to point of tooth and you must avoid long teeth on short spacings. For a tooth with extreme hook, and for a large round gullet, a spacing of 1¾ or 2 inches is right. This long space enables you to build up the back of tooth properly, because, with the greater space between the points, the backs can be kept higher without diminishing the throat room, and thus more hook is secured without weakening the teeth.

The amount of hook in wide band saws varies from 4 to 6½ inches in a 10-inch saw as commonly run, and is governed somewhat by the timber being sawed and the feed carried. But there are those who want still more hook than that mentioned above, and their efforts in this direction have been thwarted in a measure because the construction of sharpeners has rendered it impossible to further tilt the head for extra hook, and still have the machine continue to operate successfully.

In deference to this circumstance, some machines now give a possible hook of 12 inches, in 12 inches of width or 45 degrees. Moreover, the construction of the machines renders their operation equally successful when head is thus set as when set at a less extreme tilt. Given a saw properly tensioned and running true on the wheels when out of the cut, or running idle, but tending to run back on the wheels, as soon as it enters the log, it indicates a need of more hook, and you can increase the hook up to the point where the saw runs uniform. In like manner, if saws run ahead of the wheels when in the cut, it is an indication of too much hook, and you may properly consider the reduction of same.—Packages.

A SUPERIOR FILING ROOM MACHINE.

Sawfiling might truly be called a science, and the filer an artist, so keen a similarity must there be between each tooth. And each tooth must be so accurately and scientifically drawn out that not one tooth will bind in the log. The teeth must be swaged so as to give a sharp cutting edge widest at extreme points. All this could be done to a certain extent by the old method with hammer and bar. But American ambition and push demanded quicker and more accurate filing-room practices, until now every first-class saw mill or factory has an up-to-date filing room fitted with the most expensive and best machines that are on the market.

One of the first machines the filers began to demand was a good practical saw swage; but only of late years has a thoroughly practical swage been put upon the market. Of these the Hanchett swage, manufactured by the Hanchett Swage Works, Big Rapids, Michigan,

THE HANCHETT SWAGE.

has perhaps the best claim to superiority. This is not only shown by a number of other swages having been modeled after it, but it has also several distinct features that are not duplicated by any other swage in existence.

1st. Take for example a saw that has struck a nail or other obstruction, and the corners are entirely gone on one side, or the teeth are broken off, say, 1-16 of an inch. By pulling the swaging lever over a second time a fine swage may be obtained and the teeth will be drawn out as long as the others, while other swages will bend a short tooth backward and not swage it at all.

2nd. Take a saw that has just been ground down and no swage is started. By pulling the swaging lever over a second time on say a 14 gauge, a seven or better can be obtained, and the saw will grind up even the first time grinding. With other swages an upset must be used first, which results in long and short teeth, besides more or less of them will be bent.

VENEERS—SINGLE PLY OR GLUED UP stock. INTERNATIONAL LUMBER CO., LIMITED, Sault Ste. Marie, Ontario, Canada.

FOR SALE

WE CAN SUPPLY FOR PROMPT SHIPMENT 75,000 feet Rock Elm timbers from 12 to 34 feet long, cut to order. For particulars, etc., write to KEENAN BROS., Owen Sound.

WANTED—AN 8" SECOND-HAND MOULDer. Either a 3 or 4 side machine would do. Feed rolls must be power driven in bed and machine be in good order. Address W. S. F., care CANADA LUMBERMAN.

FOR SALE.

IN VIRGINIA, LARGE TIMBER LIMITS—virgin growth, and water powers — good streams for driving—easy of access. Apply to H. M. SIMPSON, 415 Merchants Bank Building, 205 St. James street, Montreal.

ELM LOGS WANTED

WE ARE BUYERS OF PRIME ROCK ELM Logs, round, with bark on, in lengths of 20 feet and up, to average 27 feet long, from 14 inch diameter at small end upwards. Prices f.o.b. car, Montreal. AUGER & SON, Quebec.

FOR SALE

3500 acres of timber lands in Lindsay and St. Edmunds townships, Bruce County, covered with Pine, Hemlock, Cedar and Hardwood. Quantity estimated at twenty-five million feet. For particulars apply to Lock Box 26, Southampton, Ont.

FOR SALE.

200 M FT. OF SOUTHERN LONG LEAF YELlow Pine 10" x 10" to 14" x 14" and up, average length 28 ft.; a small lot of 14" x 14", 55' to 60' long, all sawn square, also about 100 M ft. 3" good grade common birch suitable to cut into flooring and furniture stock. No fair offer refused. Address Box 630, Sorel, Que.

TIMBER LIMIT FOR SALE

TENDERS WILL BE RECEIVED UNTIL AUGUST 15TH NEXT for a berth of 50 square miles, limit No. 42, on the Swan River, Saskatchewan Territory. The highest or any tender not necessarily accepted. Full particulars may be obtained by aderessing "TIMBER, Box 550, London, Ontario."

Logs For Sale

5,000 GOOD LOGS, MOSTLY WHITE PINE 16 feet long, now running into the mouth of Spanish River at Georgian Bay. Also Limit for sale with or without saw mill. Limit and saw mill located on C. P. R. main line. PINE LUMBER COMPANY, Cartier, Ont.

Patent For Sale.

BAND SAW CLAPBOARD MACHINE, THE only one in the world. Carriage has automatic setting device, only 8" stroke, with turn table. Block stands vertical and cuts all clapboards radially. Will take blocks any diameter 14" to 32 x 48" long. All clapboards cut desired thickness regardless diameter block. Will cut five times faster then any circular machine. 25 per cent. saved in saw kerf. A sound block 48" long x 32" diameter will cut out $10 worth of clapboards. Large demand in New England States. Prices $45 per M pieces Will sell entire right for Dominion. Drawings and specifications on application. A. J. BURTON, Parry Sound, Ont.

FOR SALE — TWO GOOD SECOND-HAND Horizontal Tubular Boilers, one 25 H. P., one 35 H. P. For particulars address: MACHINERY EXCHANGE, 22-24 Victoria Square, Montreal, Quebec.

FOR SALE—ONE 8 INCH, 4 SIDED, ENDless bed Cowan moulder, (Head for 10" stock) in good condition. Can be seen at work in our factory. LAKING, PATTERSON & CO., Hamilton, Ont.

MAPLE WANTED.

WE WILL BUY 1½" AND 2" COMMON AND Better Hard Maple in any quantity. Write us. GOLD MEDAL FURNITURE M'F'G. CO., Limited, Toronto.

CURRENT TRADE CONDITIONS.

ONTARIO.

Lumber manufacturers and dealers are satisfied with the trade of the month of June. While it has been, perhaps, slightly less in volume than that of the corresponding month last year, conditions existed this season which restricted the consumption of building lumber. Nevertheless, unsold stocks are smaller than usual at this season of the year, and the outlook is for a steady demand at firm prices. In pine lumber the demand is running to the lower grades, but this must be taken as a favorable factor, for the disposal of the comparatively small percentage of uppers which is now produced causes manufacturers no anxiety. If prices are to advance in relation to the demand, higher prices for box lumber may be predicted, for the call for this grade is unusually heavy. By many persons it is believed that hemlock lumber will make new prices in the near future. It is going into consumption so rapidly as to warrant a readjustment of prices on a higher basis. For stock two inches and thicker there is a very active demand.

The supply of hardwood lumber is still short. Dealers have been large buyers of elm and have picked up basswood where it could be found. Maple is also selling more freely.

Those who are looking for arguments on which to base predictions of lower prices for lumber have no abundance of strong points. The different markets supplied by the Canadian product are in a healthy condition, with little probability of a curtailment of buying power for some time to come. Should an abundant crop of grain be harvested in Canada and the United States, it will probably be reflected in a strong lumber market.

QUEBEC AND NEW BRUNSWICK.

The manfacturers of spruce lumber are in a very comfortable position in respect to the disposal of their output. The danger of a large percentage of the log production being hung up has been lessened only slightly by the recent rains. There promises to be a shortage in the spruce supply. It is clained that the demand is larger than ever known at this season of the year, and that manufacturers are receiving new orders daily. Many of these they are compelled to refuse on account of having their stock sold largely in advance. There has been heavy buying in Nova Scotia for the South American market, the prices for spruce ranging frrom $14 to $18. Deals are selling at $14 at the mill. The West India trade is also taking a considerable quantity of stock.

The price of New Brunswick cedar shingles still holds around $3.40 to $3.50 for extras, on Boston rate of freight. A few manufacturers are said to be selling even as low as $3.35, but this cannot be said to be the market price, while indications point to an advance in the near future.

UNITED STATES.

Lumber values in the Eastern States are uncertain, the building strike at New York having affected outside points. Although rumours of a settlement of this strike have been circulated, up to the time of going to press such a result has not been accomplished. When this end is reached, however, there will doubtless be heavy buying of lumber. The general demand throughout the United States is fair. Some dealers report a falling off in the call for building lumber. All manufacturers are holding prices up to the notch, being convinced, apparently, that the entire production will find a market. Reports from Buffalo, Tonawanda and Philadelphia tell of a remarkable demand for low grade white pine. Although the new cut is arriving the supply of the lower grades does not seem to increase, while it is predicted that consumption will expand from this time on. The buying of the higher grades is confined largely to actual needs. In the Chicago market piece stuff sells readily at $16.50 to $17 for strictly short. Hemlock in cargo lots is said to be slightly weaker.

Dry hardwood lumber is in better supply, but prices are still strong. Michigan oak and ash are held at $30 and $22 respectively. Basswood brings $22 and birch $20. Log run elm lumber is worth $18 at the mill. The scarcity of maple continues, manufacturers having to turn down orders.

The shingle market is still unsettled and prices as uncertain as ever. The depression in red cedar shingles has affected the entire list. The Logging Men's Association of the Pacific Coast have decided to close their camps from June 30th to August 3rd on account of the accumulation of shingles, especially of the Washington mills.

GREAT BRITAIN.

The lumber demand in Great Britain, if anything, shows some improvement, although the market cannot be called active. Wet weather has restricted the consumption. Shippers show no disposition to lower their asking prices, but on the other hand, in view of the probability of a shortage in the Canadian supply, are disposed to raise their quotations. Sentiment of importers is gradually changing to the view taken by shippers, namely, that the cost of production will not permit of selling lumber at lower prices. Large quantities of whitewood recently reached the London market and somewhat upset prices of spruce, but the condition is again normal and no further depression is anticipated in the near future. One of the largest importers points out that there is plenty of room in London for moderate supplies of whitewood in addition to all the spruce which is likely to reach that market. Pine deals from the St. Lawrence are going steadily into consumption. Birch timber is in fair demand, although prices are inclined to be easier. The volume of trade in birch planks is steadily increasing. Recent sales have been at 11d to one shilling per cubic foot. First-class rock elm timber is very scarce, but the stock of second-class and soft elm is rather large.

The stock of white pine deals and battens in the public docks at London is 588,000 pieces, as compared with 690,000 pieces at corresponding date last year. Spruce makes even a better showing, the stock being 536,000 pieces, against 844,000 pieces in 1902.

STOCKS AND PRICES.

The steamer Obi is loading a cargo of deals at Montreal for the United Kingdom.

Hemlock is being delivered in Chicago at $14 to $14.50 for No. 1 piece stuff.

The steamer Nordkap cleared last week from St. John, N.B., for London, with deals.

The Steamer Janeto sailed last week from Montreal for Greenock with timber, calling at Quebec to complete cargo.

Alex. Watson reports that a drive of logs in which he is interested is hung up on the St. John river in New Brunswick.

A raft of 30,000 ties reached Wiarton, Ont., on June 27th. This is said to be the largest number ever taken to Wairton by one tug.

The strike of the employees of the sash and door manufacturers of Montreal has been settled, after an idleness of nine weeks.

The Alex. Gibson Railway & Manufacturing Company, of Marysville, N. B., have 4,000,000 feet of logs hung up on the Nashwaak river.

The drive of logs on the Eel river, taken out by S. C. Wiggins, of Woodstock, N.B., is hung up. He has about 400,000 feet of cedar and spruce only a few miles from the mill.

The schooners Margaret May Riley and Helen Shafner are loading lumber at Annapolis, N. S., for the West Indies, and the barque Athena is taking on a cargo there for Buenos Ayres.

B. J. Gilligan, of Mattawa, Ont., is just getting out with his drive of 9,000,000 feet of logs, which were taken out for the Hull Lumber Company last winter. They were drawn on to Pontain Creek, which he has just got clear of.

Bay City parties are reported to have bought 10,000,000 feet of pine lumber from the Ontario Lumber Company, of French River, Ont., at an average of $1 per thousand over the price obtained for the same grade of stock last year.

In Chicago No. 1 white pine lath are quoted at $3.50, No. 1 mixed and No. 1 hemlock at $3 to $3.15, and No. 2 at $2.75. In the Saginaw Valley No. 1 lath are held at $3.50 for pine and $3.20 for hemlock. Pine shingles are offered at $4.25 and $3.25.

There is an improved demand for slack cooperage stock and a decided scarcity in everything but hoops. Jobbers at Buffalo quote in carlots as follows: First-class elm flour barrel staves, $9.25 to $9.50; mill run fruit barrels, $7.25 to $7.50; second-class, $5.50 to $5.75; basswood heading, 6½ to 6¾ cents for first-class and 4½ to 4¾ cents for second-class; coiled hoops, $9.50 to $9.75 for 5½ foot and $10 to $10.25 for 6 foot; hickory hoops, $6.50 to $6.75.

Concerning the Minneapolis lumber market the American Lumberman says: "The market is in a satisfactory state; the stringency in stocks is now overcome and the trade is somewhat lighter. Conditions are only what is expected at this time. The general situation is good and crop prospects warrant belief in a good fall trade. The advance in hemlock dimension is maintained and white pine dimension promise to be as scarce as ever. From all reports the mills continue to slight dimension, which should command the present list prices without any trouble."

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

Inquiry made to-day in local lumber offices fails to show any changes in Ottawa district lumber prices since last letter, so that present quotations stand. There has been comparatively little change in business. Dealers still profess an inability to secure stocks at prices that will insure them a return on their money. The unsettled state of the New York lumber market continues to give local dealers cause for vexation on account of the delay in shipments that is caused. A couple of times a settlement of the labor difficulties in Gotham has been reported, but the pot still seems to be boiling.

Around the mills all is activity, and with a good supply of logs laid over from last season's drives the saws are piling up lots of lumber. The first of the pine will not be ready for market before the first of August. While a scarcity of labor is reported at some of the mills, there have been no strikes since the Hawkesbury affair in April.

Reports show that the log drives are moving freely in all directions. They were kept on the go during the long drought, and the recent constant rains have helped them out towards the main streams. It is now practically assured that the big end of the log cut of 1902-1903 will reach the mills this season. This being the case, there should be no let up in sawing operations on account of shortage in log supply. The first of the cut of logs of the season 1902-1903 have already arrived at the mills. Rafts have been received at their mills by the W. C. Edwards Company, the Hawkesbury Lumber Company and Mr. J. R. Booth.

On the Petawawa river alone Mr. J. R. Booth has fully 50,000 logs. The Hawkesbury Lumber Company's drive off the Dumoine came out into the main stream last week. Other firms are doing equally well, noticeably the MacLarens, of Buckingham, who have everything well in hand on the Lievre.

The square timber is behaving itself nicely, in fact the first rafts have already reached Ottawa, but this was taken off one of the Gillies limits convenient to the main stream. Reports show that the other square timber rafts not being handled over the C. P. Railway are many miles distant from the Capital. However, taking all in all, natural conditions could not be very much better, and the lumbermen have nothing to complain of.

Already plans are being made for the work of 1903-1904. It is expected the men will be sent into the woods earlier this year than is usually the case, and it will be a matter of only a few weeks until the van guard is on the way. Conditions promise to be about the same as they were last year. The general prosperity will retain wages on a high plane.

An effort is being made by Mr. J. R. Booth and Hon. Senator Edwards to have the recent by-law prohibiting the piling of lumber in large quantities within the city limits rescinded. Application to the City Council to this effect has been made, but it is difficult to say what the outcome will be. It is pretty safe to say, however, that the mills will remain whether the piles go or stay. The by-law, in all probability, will be modified.

Mr. W. H. McAuliffe, lumber dealer, of Ottawa, has purchased all the present season's cut of spruce at McLachlan Bros. mill at Arnprior and the St. Anthony Lumber Company's mill at Whitney. Spruce is a more rapid drier than pine, and Mr. McAuliffe's stock will be ready to ship at any time now. Mr. McAuliffe's new planing mill is well advanced. The roof is being placed in position, and the mill will be running in about a month.

Mr. Charles Desmarais, Hull, Que., took out a large stock of poles this season. He has 1,500 on hand 25 feet and upward in length, 7 inch top. These are piled along the Gatineau and Pontiac lines ready for prompt shipment.

An old lumberman to-day furnished some figures which will show the wonderful advances there have been in the past half century in the price of white pine square timber. It is selling now at the port of Quebec at 65 cents a cubic foot, whereas it went begging for purchasers, practically, five years ago at 40 cents a cubic foot. The advance in the past five years has been almost four times as great as was the advance in the previous thirty years, for in 1869 white pine was quoted at Quebec at 33 cents a foot. This leaves an advance of 7 cents between 1869 and 1898, as against an advance of 25 cents between 1898 and 1903. Decrease in production rather than increase in demand is probably the reason for this strong advance in square timber. This year not one raft will pass down to Quebec, where there were ten a few years ago. It is getting more difficult, as the years pass by, and the cutting increases, to secure Canadian white pine suitable for decking.

Late reports, contrary to general expectations, show that forest fires during the recent long drought played havoc in standing timber on some of the Ontario limits. In the vicinity of Des Joachims, in the Black river section of the Upper Ottawa country, standing timber equivalent to fully 500,000 logs was burned through. This was on one of Mr. J. R. Booth's limits. Several keep-overs, holding large stores of supplies, were also destroyed. It is expected that part of the standing timber that was scorched can be sawed, providing it is felled before the worms get in their insidious work.

Mr. Wm. Hutcheson, ex M.P., Canadian Commissioner to the Exposition held at Osaka, Japan, states that the British Columbia, or Douglas fir, as it is commonly called, is received in great favor in the Orient and in Manilla. Experiments made on Government contracts in Manilla have shown that the Douglas fir is the only wood which will stand weather and insect ravages. For this reason it has been selected, although disguised under the name of Oregon fir.

OTTAWA, June 26th, 1903.

The following charters are reported: Barque Massa-e-Gueco, Chatham, N. B., to Buenos Ayres, lumber, $8; barque Niagara, Pictou, N. S., to Swansea, deals, 40s; str. Daventry, St. John, N. B., to w. c. England, deals, 36s 3d.

TIMBER LIMIT TRANSACTIONS.

Some years ago Charles Merrill & Company, of Bay City, Mich., purchased a tract of pine timber in the Lake of the Woods district, estimated to contain about 100,000,000 feet. They are reported to have just sold the timber to Canadian parties for $400,000, which is said to show a handsome profit on the investment.

THE BOSTON MARKET.

Spruce lumber continues in a very firm position, owing to a light supply, notwithstanding the interruption to business still being felt from the strikes in the building trade. Shippers at the eastern mills complain of car shortage, which delays shipments seriously. Prices are steady and unchanged: Ten and 12 in. dimensions, $21; 9 in. and under, $19; 10 and 12 in. random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7 and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9 in. and under, 10 feet and up, $18 to $18.50; 5 in. and up, merchantable boards, $17; matched boards, $18 50 to $20; out spruce boards, $13 to $14; bundle furring, $17.

There is a quiet demand for hemlock lumber, with prices steady as last quoted: Boards, 12, 14 and 16 feet stock, $15 for good eastern; Pennsylvania, No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Western pine lumber is quiet here, though the movement in the West is active. Prices are steady: Uppers, 1 to 2 in. $84 to $87; 2½ to 3 in. $92 to 97; 4-in. $96 to $100; selects, 1-in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78; 2½ to 3 in. $84; 4-in. $86; fine common, 1-in. $67; 1¼ to 1½ in. $69; 2-in. $72; 2½ to 3 in. $80; 4-in. $82; barn boards, $23 to $33; coffin boards, $28 to $32.

Clapboards are steady and unchanged: Extra, $45; clear, $43; second clear, $40; extra No. 1, $30.

Quartered oak is very firm with an active demand. Whitewood is a little easier, though not yet quotably lower. Other hardwoods are steady: Quartered oak, $75 to $83; plain oak, $45 to $47; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $54 to $60; sap, $43 to $48; common, $38 to 45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end dried white map, $46; birch, 75 per cent. red, $40 to $45; northern elm, $29 to $31; Michigan elm, $34 to $37.

There is a steady market for shingles, with some lots offering below the market: Extra cedar, $3.40 to $3.50; clear, $3; second clear, $2.35 to $2.45; extra No. 1, $1.75 to $1.80; British Columbia red ceder, 16-in. five butts to 2-in. $3.50 to $3.60; 18-in. five butts to 2 in. $3.75; five butts to 2¼ in. $3.90.

Laths are firm and unchanged: One and five-eighths in. $3.20 to $3.40; 1½-in. $3 to $3.15.

BRITISH TIMBER SALE.

A small quantity of Canadian lumber was sold at the last auction sale of Churchill & Sim, London, England, on June 17th, prices ruling as follows:

PINE—Ex. Belgian, from Quebec—12-18 ft. 3 x 9 in. third quality, £9 per std. Ex. Miniwaski, from Quebec—10-19 ft. 3x9 in. first quality red, £11. Ex. Ontarian, from Quebec—10-11 ft. 3x7-8 in. second quality, £12 10s. Ex. Aquila, from Quebec—9-13 ft. 3 x 12 in. third quality, £9 10s. Ex. Ashanti, from Quebec—12-14 ft. 3x10 in. second quality, £15 5s; 7-11 ft. 3x10, £14 5s; 13-14 ft. 3x9, £15; 7-11 ft. 3 x 9, £14 10s. Ex. Otterspool, from Montreal—16 ft. 3x11 in. fourth quality, £9 15s; 14-16 ft. 3x11 in. £9 15s. Ex. Norge, from Quebec—10-13 ft. 3 x 11 in. first quality, £17.

SPRUCE—Ex. Forest Holme, from Quebec—9-16 ft. 2 x 7 in. unassorted, £8 10s per std.

BIRCH—Ex. Iona, from Quebec—2 pcs. 12 and 16 ft. x 22-25 in., £5 per load of 50 cubic feet. Ex. Gulf of Venice, from St. John, N. B.—4-17 ft. 3x11-12 in., 1s 1d per cub. ft.; 3-16 ft. 3x9, 1s 2d; 7-20 ft. 3 x 8, 1s; 6-19 ft. 3x6-7, 1s.

ASH—Ex. Columbian, from Quebec—10-14 ft. 14x19 in., 50s per load. Ex. Cambrian, from Quebec—12-20 ft. 15 x 25 in., 68s.

THE WHITE PINE MARKET.

Within the past few weeks a number of expressions of uneasiness regarding the future of the white pine market in the United States have been heard, and the opinion has gained some currency that the market was on the verge of a break. For the purpose of finding out just what is the sentiment among the manufacturers of the north, the secretary of the Mississippi Valley Lumbermen's Association sent out a circular to the members of that organization requesting their views on the present situation and what they thought of the future trade. In another circular sent out this week are a few replies chosen at random and covering the several markets of the white pine section. So far as the opininos expressed are concerned they all have been written by one man. They are unanimous in expressing no apprehension for the future. All report that trade is fully as good as they have any reason to expect. Most of them are doing more business than they were at this time last year, and all of them would be shipping more lumber were the stock available with which to fill orders. Most of the replies express surprise that there should be any feeling of weakness. A number report getting better than list on several items on the list. It is agreed that a number of the heavy buyers have been attempting to bear the market, but the general opinion is that this effort will not meet with material success.

LUMBERMEN'S SUPPLIES A SPECIALTY

A NOTABLE SAWING EVENT.

The following notice, clipped from the Southland Daily News, published at Invercargill, New Zealand, is an interesting account of some sawing contests in which the world-famous Atkins saws played an important part. As usual the prize winners of the Championship Contests used Atkins saws, thus again demonstrating the fact that "Atkins is Always Ahead."

"The Axemen's Carnival, which was held at Invercargill, New Zealand, on April 13th, 1903, was a notable event, there being sawing and chopping contests, bicycle and foot races, as well as other athletic sports indulged in.

"The gathering of the axemen and sawyers was perhaps as fine as has been seen anywhere, comprising the leading men in both lines, from Australia, Tasmania, and the provinces of New Zealand. Intense interest centered in Thomas Pettit, the world's champion, who competed with great success in the sawing events, annexing the champion single-handed, and with H. Mitchell, the champion double. He saws with beautiful action and immense force, and the Atkins saw used by him simply ploughed its way through the blocks. Considering that Pettit has had very little training for the matches, his performance must stamp him as undoubtedly the foremost man of the first rank of sawyers.

"Another distinguished competitor was Herb Mitchell, ex-xhampion of New Zealand, who is well and popular known all over the island.

"For the championship single-handed sawing contest, E. C. Atkins & Company, the well known saw manufacturers of Indianapolis, Indiana, U. S. A., through their Australian representative, Mr. C. Cullen, donated $50. The first prize of $25, and championship gold medal, was won by Thomas Pettit; S. Fisher took second prize, $15; and Edward Tobin third prize, $10. Both Pettit and Fisher used Atkins saws. Pettit's time was one minute-48-2/5 seconds.

In the double-handed sawing contest, Thomas Pettit and H. Mitchell won the first prize of $25, two gold medals and two saws. It was a splendid exhibition of the sawyer's art. Pettit and his mate got to work with a wonderful swing of rapidity and ease, and sent their Atkins saw through the 24" red pine log in the surprising time of 32 3-5 seconds."

BELTING FOR LUMBERMEN.

The Dominion Belting Company, Limited, of Hamilton, Canada, are the latest in the field with belting especially adapted to the use of mills. It is a stitched oiled cotton duck belting, the steadily increasing demand for which has encouraged the company to erect a most up-to-date factory at Hamilton for its manufacture.

Their plant is now in operation, with a capacity of turning out six thousand feet of belting daily. The guarantee of the company is that their belting will give entire satisfaction, and that it is unaffected by air, atmosphere, steam, heat or acid fumes.

This belting is constructed from raw material wholly of Canadian production, and the company claim to be thus enabled to make prices much below the cost of importation.

It is their intention to use nothing but the very best duck made especially from their own formula, and this duck will be treated with a special preparation known only to their superintendent and perfected by him after an experience of 20 years in the business.

By the use of this duck and process, they promise to supply a belt equal to anything yet placed on the market as regards tensile strength, pliability, weight and freedom from stretching.

The president of this new Canadian company is Mr. John J. McGill, a gentleman well and favorably known in the highest financial and business circles.

Advertising, like the water that runs the mill, must be kept constantly flowing.—White's Sayings.

WE MAKE A SPECIALTY OF

SMALL STEAM POWERS

For every kind of service—MILL, AGRICULTURAL and MARINE.

These engines are reliable and easily managed. Remarkably small and compact for the power developed. Light and portable. They will reverse instantly at any point. High-speed, noiseless, and non-vibrative. And they are above all economical engines.

We also devote ourselves to Small Steam Yacht Installations, using Fuel-Oil and Quick-Steaming Boilers, as well as to Direct Connected Lighting Units.

The SLEEPER ENGINE COMPANY, Limited, Montreal.

BALANCING PLANER KNIVES.

When the heads of a wood planer of any kind that is intended to plane or surface wide boards are made, they are balanced so as to prevent vibration at high speeds, and the knives are the same size and weight, so that when a head is set up it runs smoothly. When the knives become dull they are taken out, put on a wet emery grinder and made sharp again; but more material must be removed from some than others, therefore when put back the head is out of balance.

In order to remedy this evil the knives are taken off and weighed, after which the heavier one is taken to the drill press, or to a lathe if no drill press is available, and holes bored in it until it will balance the other when put on a pair of scales or balances.

These knives may be twenty-four inches long, and when started up again may produce inferior lumber, because it is not planed smoothly. This shows mainly that the head is not perfectly balanced, although the knives are of usual weight, causing an inexperienced operator to wonder what causes the trouble. Now, if these knives were cut in two and the halves of each pair weighed and compared, it would be plain that both ends of the head were out of balance, when considered separately, hence the trouble.

Of course it is not practical to cut these knives in two, but they may be made perfect by balancing each separately, although that may seem to be an inconsistent statement. It may be explained as follows: Suppose that a piece of iron one-eighth inch thick is put in a vise and one of these knives balanced across the edge of it, taking care to support it at the exact centre. One end of it will be heavier than the other, therefore it becomes necessary to remove some of the material until both ends weigh the same. This knife is then balanced by itself, and when the other one of the pair is balanced in the same way we know that no more trouble will result from that source; but the two knives must now be put on the balances again and made to weigh alike, as already described.

It is necessary, however, during this process to remove an equal amount of material from both ends of the heavy knife, in order to maintain the individual balance. We are well aware of the fact that it is difficult to follow the above directions for this process, because giving the knives individual balance disturbs the collective balance, and vice versa. We do not claim that this precision in balancing is necessary in all cases, for it is not, but where imperfect lumber is produced, lack of it may be, and frequently is, the cause of it.

This applies to long knives only, because short ones are not affected by it enough to be noticeable. When knives of this kind are new they are usually the same weight throughout their length and they may be kept so by careful attention to the grinding process, for if the individual or separate balance is correct, but the pair do not agree, the heavy one may be put back in the grinder and another cut taken off from it over its entire length. It is not easy to strike it just right in this way, but a little practice will enable the operator to do good work along this line. If for any reason it is desirable to continue the practice of boring holes, care should be taken to bore the same on both ends of the knife. Of course these holes should not extend entirely through the blade, as that would weaken it unduly, but by using a flat drill ground to an obtuse angle, or, in other words, one that is made blunt, the holes will be large, thus removing a considerale material without going entirely through.—The Tradesman.

THIN CIRCULARS FOR LOG SAWING.*

By J. H. MINER, Lumberton, Miss.

Much attention is now being paid to thinner saws by practical millmen. Economy more fully asserts itself each year and millmen are beginning to draw the line more closely. Before the band saw was fully introduced it was condemned by ninety-nine out of a hundred. But thin bands or thin circulars are no longer an experiment and some fast circular mills have used nothing heavier than 10 gauge for years. True, they have been tried by many without success, but the fault was not in the saw.

The day is coming when 12 gauge saws will cut 50,000 feet per day. I received a letter recently from a prominent filer in Arkansas stating that he had cut 78 lines, 16 feet long, 12 inches deep of good lumber with a 10 gauge saw in 5 minutes. But under the same treatment that 90 per cent. of the thick saws get, not one could expect a thin saw to be a success even on a smaller output. The fact is that there are but few men who get out of the circular all that there is in it. If one man can run 72 inch by 12 gauge saws successfully, that demonstrates that it can be done. If others can't do it there must be something lacking. There are several essentials. To be a success, thin saws must be run at a high speed, must have an absolutely solid, steady running mandrel, plenty of power, and a good filer and sawyer. A thin saw is more sensitive than a thick one, and under like circumstances the thin saw cannot be expected to do as much work.

Suppose that the millman who is satisfied with 50,000 feet from his 6 or 7 gauge saws, run at a standard speed, would put in a 10 gauge 60 inch saw with 100 teeth and speed this saw to 1,000 revolutions, and could get a practical sawyer and filer that could and would run it, he would, to his surprise, increase his cut with a considerable saving in saw kerf. If the man that contemplates a new mill, and wants 50,000 to 75,000 feet per day, would put in 72 inch by 12 gauge saws, with not less than 110 teeth, with speed 1,100 and a 12 inch cylinder feed, to my mind he would have the most economical mill that could be built. There are many who are ready to assert that this is too high a speed and that the steel will not stand this strain. This is a mistake, for saws have been run successfully at this speed. The greatest drawback in introducing thin saws is to get filers who can fit them properly. The filer and sawyer must work in unison. All prejudice and personal feeling must be laid aside, both working solely to the employer's interest, instead of one or the other seeking to work to the other's disadvantage, which is sometimes done in a manner so intricate that the most practical foreman cannot detect where the trouble is.

In running thin circulars the tension must be absolutely uniform and in exactly the proper place. There is a vast diversity of opinion about where the exact location of the tension should be, but practical filers do not disagree on this point. A variation of 1-1000 of an inch in the drop of any high speed saw will take 2 inches feed from it; that is, adjust that 1-1000 of an inch and the saw will stand 2 inches more feed.

A high speed saw can be accurately hammered only by the use of a gauge properly curved, and the saw must be hammered until it shows no light under the gauge. It will then be practically all uniform, and so far as tension goes, in perfect condition to run.

The utmost care must be exercised in the temper of high-speed thin saws. If it is not uniform then the saw will be thrown out of tension at its speed, no matter how perfectly balanced. It will astonish any practical man that uses the straight edge how much he can improve either bands, circulars or band resaws with a tension gauge of the proper curve. I could not get a saw at high-speed anywhere near uniform without one. There is no estimating what a high-speed, perfectly hammered saw will do on a quick rig with a good sawyer. At the same speed the thick saw would certainly do more work than the thin. I refer to mills maintaining their present output with thin saws. No one wants to decrease his cut, for what would be gained in one way would be lost in another. I am just in receipt of a letter from a saw company wanting to send a 9 or 10 gauge 60-inch saw here on trial. We are now using 8-gauge, 56-inch, 96 teeth, and don't think we can hold the cut at 100,000 feet per day with thinner saws. If I could increase our speed from 925 to 1,100, I would try the thinner saws.

This is an item in every up-to-date mill where trimmers and gang slashers are used. The public have had much to read in the trade papers about broken cut-off saws, but I find that the secret is in but one thing principally, and that is in giving them more set. They should be filled or ground square in front, with pitch line to centre, with the back beveled. This makes beyond a doubt the best tooth for a cut-off saw, swing or stationary. Each tooth is a cutter and a raker. If the reader doubts this, just fit up one saw and that will convince him. Large cut-off saws should be left a little slack on the rim, sufficient not to wave while in motion. Cut-off saws should be at least one gauge heavier than the standard. This will add no more in price or in power to run, but will add 50 per cent. to the life of the saw. I have never seen a cut-off saw that was not abused; getting pinched or twisted. Keep them sharp, file square in front and with plenty of set, and that will reduce the broken saw expense to a minimum. It is supposed that the reader is aware that square corners will cause cracks. The same applies to all machinery where subject to strain. Short cracks can be deeply center punched on each side which will arrest it. Cracks over three inches long should be drilled. Solid blows must be applied or the crack might extend further while punching.

*The author is an authority on circular saw hammering and fitting.

FEEDING WORK HORSES.

The horse has a smaller stomach than an ox, and consequently must be fed less at a time. It has less power to digest coarse foods. It eats much slower, as it must do all its chewing before the food is swallowed. For these reasons it requires a longer time to eat, and its food should be more concentrated. It wants only a little coarse food at a time. Most people feed too much rather than too little, especially of hay. According to the tables of standard ration prepared by the German investigators, a 1,000 pound horse requires 11.4 pounds of digestible food daily when doing moderate work, 13.6 pounds for average work, and 16.6 pounds for heavy work. With a basal ration of 10 pounds of hay, the grain needed to furnish the above quantities of digestible nutriments, when consisting of a mixture in equal parts of corn and oats, would be approximately 11.5 pounds, 15 pounds and 20 pounds for three sorts of labor. Lavalard, who made observations covering a number of years with 32,000 omnibus, army, and draft horses, came to the conclusion that a horse performing ordinary work requires at the rate of 1,215 pounds of digestible nutriments per 100 pounds of live weight. This is equivalent to 12.1 pounds of digestible food daily for a 1,000 pound horse, a quantity not inconsistent with the German standard.

SUITABLE FOODS FOR HORSES.

It is necessary, especially with hard working horses, that a large proportion of the daily ration be composed of the more concentrated feeding stuffs. A horse would have to consume over 40 pounds of hay to obtain 17.7 pounds of digestible nutriments, the approximate amound required daily by a horse at severe labor. Ten to twelve pounds of hay daily is quite sufficient for a draft horse. The managers of work horses on many farms are kept constantly supplied with hay, which is not only wasteful, but injurious to the animal as well. Recent researches have shown that muscular effort is largely sustained by the carbo-hydrates and fats of the food, and it is probably true that rations composed of the ordinary farm products, meadow hay, straw, silage, roots and the cereal grains will be found sufficiently rich in protein without the addition of nitrogenous feeding stuffs. Doubtless in cases of heavy labor, the addition of a little oil meal or other nitrogenous food would be beneficial. According to the German standards the nutritive ratio should be from 1.7 to 1.6 according to the severity of labor, the daily weight of protein to be from 1.5 to 2.5 pounds. Oats are regarded by many as essential to the maintenance of the driving or working horse, but many other foods are successfully used in their place, wheat, bran, corn, barley, dried brewers' grains, etc., are often used instead of oats without any bad results, and frequently with considerable advantage in the cost of the ration. Timothy hay, although not particularly rich in digestible nutrients, is preferred by most horsemen, chiefly on account of the freedom from dust and the ease with which it may be distinguished from other grasses. With working horses, whose sustenance is largely supplied by the grain food, timothy is probably the most satisfactory roughage, but bright, clean clover is excellent for idle horses and colts, and requires very little grain in addition to form a suitable ration.

SOME SAMPLE RATIONS.

Some good rations for 1,000 pound horses at moderate work are suggested by Jordan :—

1. 10 lbs. timothy or mixed hay, 11½ lbs. oats.
2. 10 lbs. hay, 10½ lbs. oats and barley, equal parts by weight.
3. 10 lbs. hay, 8 lbs. oats, 4 lbs. brewers' grains.
4. 10 lbs. hay, 8 lbs. oats, 4 lbs. wheat bran.
5. 11 lbs. hay, 3½ lbs. corn, 4 lbs. wheat bran, 4 lbs. brewers' grains.
6. 10 lbs. hay, 5 lbs. corn, 4½ lbs. barley.
7. 10 lbs. hay, 5 lbs. corn, 6½ lbs. wheat bran.
8. 10 lbs. hay, 5 lbs. corn, 6 lbs. brewers' grains.
9. 10 lbs. hay, 4½ lbs. barley, 4 lbs. wheat bran, 3 lbs. brewers' grains.

Silage, roots and other green food may often be substituted for a minor part of the hay with advantage to the animals' appetite and health.

Where the work is harder the amount of grain in the ration should be increased ; but the amount of hay should remain stationary. The increase in feed should be greater proportionately than the increase in the amount of work done, and as a general rule old horses should be fed better than young ones. That judgment which comes of experience will always be a safer guide than any mechanical rule for feeding, but this is certain, however, whatever feeding stuffs are used, and whatever order of feeding is adopted, regularity and uniformity should at all times prevail in both feeding and watering. If water is always available, a horse will not take too much to injure himselve, but with working horses it will always be found better to give them their regular and largest supply previous to feeding, and it may also be well to supply a limited supply after feeding. When much heated or fatigued a horse should have water only in small quantities.

The Arabs have a proverb :—"Rest and fat are the greatest enemies of the horse." Hard labor or an abundance of exercise should go hand in hand with heavy feeding, and when a period of idleness comes for the horse the grain ration should be cut down one half at least, or even withdrawn altogether where the fodder is particularly good quality.

Some years ago the W. C. Edwards Company, of Rockland, Ont., adopted a system of feeding their horses which has proved very satisfactory. Mr. Edwards gives the following description of it : "We employ say forty horses about our mills here in the summer season. In the rear of our stables we have a feed room, where cut straw for bedding and our cut hay, oats and ground feed are kept ; here we have two mixing boxes, where the rations for the horses are mixed before feeding ; the cut hay is put into these boxes and is thoroughly soaked with water 12 hours before it is fed. The ground feed is mixed dry and before feeding is thoroughly mixed with the wet hay. The rations we started out with was 4 lbs. cut hay, ½ lb. bran and 5 lbs. ground oats and arley to each horse night and morning, and 4 lbs. dry oats at noon only. Our horses are generally of large size, and are doing excessively hard work, and we found this ration too small for them and gradually increased it until we settled down to this :—5 lbs. hay, 5 lbs. ground grain, and ½ lb. of bran to each horse morning and night, and 8 lbs. of dry oats at noon only (no hay), and this we find ample for the largest horse doing the most excessive work. Our saving is at least 10 lbs. of hay per day for each horse, and 6 lbs. of grain for each. Not only is this the case, but our horses are healthier and better in every way. Under the old system it was a common thing for us to lose from one to five horses every summer with colland inflammation, but in the past seven summers under our new system not only have we not lost one horse, but we have not had a sick horse. A much smaller ration than we feed would be ample for farm horses, or for any horses doing ordinary work. We may add, also, that with this system of feeding hay, together with the free use of wheat, bran and a little ground oats mixed with it, we find we can develop colts in a manner that we have never seen them developed before."

F. W. HODSON,
Live Stock Commissioner.

THE BURRARD INLET FLUME & BOOM COMPANY, LIMITED.

This company owns a large amount of cedar timber in the Capilano Valley of British Columbia, commencing at the Vancouver city water works dam (which is 7 miles from tide water on Vancouver Harbor) and extending up Capilano river about 4 or 5 miles.

The timber will be brougt down to salt water on Burrard Inlet (Vancouver Harbor) by build- a flume about 4½ miles long, and utilizing the river for the balance of the distance.

The company has a water record from the Provincial Government for diverting the necessary water from the Capilano river for operation of the flume, and under the Rivers and Streams Act they have been given control of the Capilano river, whereby they may clean out and improve the river, build the necessary retaining booms at its mouth and be allowed to charge a toll to other parties who may wish to use the river—toll to be fixed by a judge of the court.

The company has also permission from the Dominion Government to use a portion of the Indian Reservation at the mouth of the Capilano river to make the necessary shore fastenings for their booms, as well as for other purposes in connection with their business. The flume is being built principally for carrying shingle bolts, but will be large enough and straight enough to carry long bolts—12 to 18 feet long. It will be constructed V shape, 24 inches deep and made of 2-inch plank.

The officials of the company are: J. G. Woods, President and Managing Director ; H. H. Spicer, Secretary ; H. M. Burwell, S. O. Richards, R. Byron Johnson, Hon. Cecil Edwards, all of Vancouver.

Quance Bros., of Delhi, Ont., are extending their planing mill and adding a new engine and boiler.

SOME FACTS ABOUT CHECKS.

Bank checks possess many advantages for the conduct of business, and are used to a proportionately great extent. They are in nature but orders for the payment of money, and are payable in the order in which they are presented, not according to that in which they are drawn, says C. E. Locke in an exchange. As given in the usual course of business, they do not constitute payment of the indebtedness for which they are given until paid. Nor will the concurrent receipting of the debts for which they are given change this. If they are not paid on proper presentation, resort may be had to the orignal claims. The rule is different in this respect as to certified checks. The having of checks certified constitutes payment as to the persons drawing them.

Checks should be dated. If not dated at all, and they do not contain any statement as to when they are to be paid, they are never payable. They may be ante or post-dated, as well as dated on the day of delivery. By being antedated they may be made to cover prior transactions, and in a measure determine the relative rights of the parties to them, provided that no fraud is intended or done. Post-dating in the main determines the date of payment.

When post-dated so as to fall due on Sunday, they are payable on the following Monday. Checks post-dated or maturing on legal holidays should be presented the day following. When post-dated checks are paid before the dates mentioned, the money paid on them can be recovered. If blanks are left for the date, the holder of checks are thereby authorized to insert the true dates of delivery, but no other dates, and if they insert any other date it makes the checks void. Changing the date of checks without consent of the drawers will do the same.

The presumption is that when checks are drawn, funds will be provided at the bank on which they are drawn to meet them, but presentation for payment must be made within a reasonable time. If not so presented, the holders will be charged with any consequent loss. When persons receiving checks and the banks on which they drawn are in the same place, they should be presented the same day, or, at the latest, the day after they are received. Where they are in different places, the checks must be mailed to some bank or person at the place where payable before the close of the day following any receipt, and the latter must present them before the close of the banking hours on the day following the receipt there ; no extra time will be gained by holders depositing checks in their own banks for collection.

After duly presenting checks, it is also the duty of the holder, if they are not paid, to notify the drawers before the close of the next secular day following the presentation and dishonor. No particular form of notice is required. It may be written or verbal. The principal case in which losses occur from failure to use due diligence in the collection of checks is where the banks on which they are drawn fail in the meantime. If the banks continue solvent, the drawers will remain liable to pay their checks for months at least after they are drawn. Presentation and notice of dishonor will also be dispensed with where there are no funds to pay checks, and where the banks on which they are drawn suspend payment before they can be presented, using proper diligence. After receiving checks, they must be presented for payment, unless such presentation would be useless before the orignal claims can be sued on, for, by accepting checks, there is an implied agreement to use that method of procuring the money for which they are drawn.

When checks are negotiable and pass by indorsement or delivery, the same degree of diligence will be required of each person to whom they are indorsed, in order to hold those indorsing them, as is required of original payees to hold original drawers of checks. But by putting checks in circulation, the liability of the drawers cannot be prolonged. They must be presented within the same time by indorsees as by payees.

THIN HEADING SAWS.

A word as to my experience in running thin saws. The saws furnished with our machine were 15-gauge at rim, 38-inch saws, but we still could not endure the waste of kerf. Then an 18-gauge was tried and was found to work well. So the 18-gauge was ordered to be ground 18-gauge at a distance of 3 inches from the edge. The maker misunderstood the order and tapered it from 18 to 21. This saw worked well in soft wood at ¾-inch feed, cutting about 40 to 43 pieces of 18-inch stock to the minute. It had 136 teeth. Had it contained about 200, I believe it would have sawed hardwood. A 22-inch collar was used. This collar caused much trouble ; would usually split the wood ; in nearly every piece about 10 inches would be checked or broken through. Then a saw was ordered 40 inches in diameter; 24 inches of the center, or a radius of 12 inches, was 6-gauge, then tapered to 17½-gauge to a distance of 1½ inches from the rim, and the rim straight for 1½ inches ; 17½ gauge with 150 teeth. This saw has worked satisfactorily in all kinds of timber and winter weather, pin oak, second-growth, white oak, etc., and is cutting at an average of 46 pieces a minute in a 10-block machine. A very thin saw can be used, providing it is made right, and the more teeth the more feed can be cut. Some manufacturers do not give shingle or heading saws enough tension. A saw that is used with heavy feed must have all the tension that can be given it, and kept tuned up frequently. Our saw is fitted to a 15-inch collar. — Correspondence Coopers' Journal.

HOO-HOO HOUSE AT ST. LOUIS.

There was a meeting in St. Louis, Mo., on June 17th, of the Board of Governors of the House of Hoo-Hoo, which was called for the purpose of reviewing the work thus far done and to outline plans for the future. The report of the secretary showed that about 3,000 members are still needed to complete the membership list, and he was instructed to use all possible haste in completing his part of the work. All reports show that very satisfactory progress has been made in all departments and this indication favors a more complete success to the project than was at first contemplated, as the idea is growing and new methods of increasing the benefits of membership are constantly being added. Applications from many associations of manufacturers have been received for rooms to be finished with their products and nearly all of the rooms in the building are now taken; in fact, such success has crowned the efforts in this direction that the building promises to be a more complete exposition of the commercial woods of the United States than was at first anticipated. The secretary was instructed to try and complete the membership list during the next sixty days, and this is entirely within reason, in view of the number of members applying during the past thirty days. Great progress is being made and it is advisable for those contemplating joining this club to no longer postpone action on the matter, but to join at once.

CHAIN GEARING.

In the opinion of a writer in Indian Engineering, chain gearing has several great advantages over belting and ropes. The velocity ratio is absolute, the belt cannot slip ; its length is not appreciably altered by moisture or heat, and that very serious increase in pressure on the journals, with all its attendant evils due to the tension it is necessary to maintain on the "slack" side of the belt, is non-existent.

The great objection to chain gearing has hitherto been that great irregularity and noise which is consequent upon engagement with and release from each individual tooth—such objections greatly increasing as the chain wore and stretched—made it impossible to use chain gearing for anything beyond very low velocities.

This, however, is wholly done away with in the Renold silent chain, which is well described by Mr. J. O. Nixon in the "Journal of the Franklin Institute."

The chain essentially consists of a number of links—stamped, it may be, for instance, out of sheet and hinged together at their ends by rivets and built up to any reasonable width, but it is not against the pins or rivets which the teeth of the wheels bear, but against tooth-like projections from the ends of the links. These are so shaped that if the chain were bent round a very small cylinder the concave surface would be a uniform series of parallel triangular teeth; but when straight, the tooth at the following end of one link opens out on the tooth of the preceeding end of the next link, with which it before coincided, after the manner of a partly opened pair of shears. Thus the bearing is between the sides of the teeth and not between the bottoms of the spaces between them. The teeth release and engage without sliding friction ; all are in contact at once, and as the chain stretches or wears, it simply takes up a position a little further from the axis—working as well and smoothly as at first.

Actually these chains work at very high velocities indeed, in a thoroughly satisfactory manner.

Mr. J. H. Eyer, lumber merchant, of Toronto, has deserted the ranks of batchelorhood, having on June 24th taken as his life partner Miss Simpson, of Toronto Junction. Mr. and Mrs. Eyer sailed on the steamer "Tunisian" from Montreal on June 27th, for a three months' tour of England, Scotland and the Continent.

THE NEWS

—G. T. Browning is about to erect a planing mill at Aurora, Ont.

—A. Mains will establish a sash and door factory at Hartney, Man.

—Hooker & Company, of Selkirk, Man., have sold their business to D. E. Sprague, of Winnipeg.

—The South River Lumber Company have completed extensive improvements to their saw mill at South River, Ont.

—The John Harrison & Sons Company, of Owen Sound, Ont., have just put into operation a new tie mill.

—The Manitoulin Ranch&Lumber Company, Limited, with headquarters at Windsor, Ont., has been incorporated.

—W. S. Eddy, of Bay City, Mich., is reported to have purchased 2,500,000 acres of timber land in Mexico.

—The Canadian Skewer Company, of Hespeler, Ont., are said to be considering the question of moving to another point.

—George A. Lurrabee's new saw mill on Salmon Creek, near Vancouver, B.C., will have a daily capacity of 30,000 feet.

—Conway & Johnston, lumber merchants, Crystal City, Man., have dissolved partnership, James Conway continuing the business.

—The company formed by W. H. Higgins, of Vancouver, to operate timber limits, have decided to build a large mill at Toba River, 160 miles up the coast.

—The company formed to build a saw mill at Trout Lake, B. C., will be known as the Pingston Creek Lumber Company. The mill will be operated by water power.

—Rhodes, Curry & Company are installing a complete telephone system throughout their wood-working factory at Amherst, N.S. There will be fifteen instruments.

—The Northern Towing Company has been organized at Vancouver, B.C. It is the intention to purchase a fleet of tugs and to devote considerable attention to the towing of logs.

—Stetson, Cutler & Company's two saw mills at St. John, N.B., resumed operations on June 10th, after having been closed since December. Fred C. Beatty is now superintendent of the mill.

—Incorporation has been granted to the Kettle River Lumber Company, Limited, which recently took over the lumber business of Lequime & Powers at Grand Forks, B. C. The capitalization is $50,000.

—J. S. Deschamps, L. A. Campbell and Frank R. Mendanhall are said to have formed a partnership to acquire timber limits and build a saw mill on the Columbia river between Trail and Robson, B. C.

—The mill of F. E. Sayre at Briggs' Corner, N. B., which was destroyed by a forest fire last month, was a well equipped establishment with a daily capacity of 30,000 feet, in addition to shingle and lath machines.

—Proceedings were taken in Ottawa against J. R. Booth and the W. C. Edwards Company for violation of the recently enacted by-law prohibiting the piling of lumber within the limits of the city. A small fine was imposed.

—The James Murchie & Sons Company has been incorporated under the laws of the State of Maine, with a paid-up capital of $495,000. The company will conduct a general lumber business. J. G. Murchie, of St. John, is interested.

—The Meductic Meat Company have made a proposition to establish industries at Woodstock, N.B., for the curing of meat and for manufacturing hubs, spokes, ferkins, and barrels. They agree to expend $20,000 on buildings and plant.

—The new mill which Alfred Dickie and John A. Gillies, of Stewiacke, N.S., are building in Labrador will be equiped with a Killam double circular, a live gang, and a stock gang fitted to cut South American specifications. They recently purchased the steamer Viking for use as a transport to and from Labrador.

—Lumbermen were prominent in the recent military tournament in Madison Square Gardens, New York. One of the rgeiments was the 42nd of Ottawa, which is known as the "Duke of Cornwall's Own." This regiment is composed largely of bushmen, the officers including Capt. R. Blackburn, of the Hawkesbury Lumber Company, and Capt. Cameron, of Cameron & Company, Ottawa.

—The Grand Valley Seignory, comprising 54 miles of timber limits and a saw mill in the Lake St. John District of Quebec, formerly owned by the Lowell Estate, has been purchased for the sum of $100,000 by a syndicate of New York and Ontario capitalists. The new owners intend to spend a considerable sum of money in the development of the property and will manufacture lumber for the European market.

—Dennis Harris, C. E., was commissioned by the British Columbia Government to make a survey between the west end of Cowichan Lake and the headwaters of Alberni Inlet. His report contains the following in reference to to the timber: "From zero to station 50 (one mile) the timber consists principally of yellow cedar and hemlock. From this on, as far as I went in the valley, on both sides of the river, but below the line, there is a belt of long, straight fir timber, 1,500 feet wide, averaging 18 to 36 inches, which will cut as high as 60 M. to the acre, of good merchantable timber. This belt of fir timber is fringed with a line of sound hemlock of large dimensions."

—A large mill for the manufacture of cooperage stock is being established at Sand Point, Ont., by S. O. Church & Bro., of New York, who have two other mills in Canada and three in the United States. The heading mill at Sand Point was completed last spring, and the stave and hoop mill will be finished at an early date. The roof of the heading mill is covered with galvanized iron. The power equipment includes an Osborne & Kelly engine of 65 horse power. The dry kiln was furnished by the Standard Dry Kiln Company, of Indianapolis, and uses live steam from the boiler. A siding 1,100 feet in length from the C.P.R. track furnishes shipping facilities. The timber used is elm, ash, basswood, soft maple, butternut, poplar and balm of gilead, the product being shipped largely to the sugar refineries in Montreal. The manager of the mill is T. H. DeCew, late of Fenelon Falls, who has been engaged in this line of business for many years and is well qualified for the position.

TRADE NOTES.

Attention is directed to the advertisement of the Hart Emery Wheel Company, Limited, of Hamilton, Canada, in this issue. The company is one of the most progressive of our Canadian manufacturing firms.

Rapid progress is being made with the new works of the Owen Sound Iron Company at Owen Sound, Ont. The main building will be 337 feet long. South of the main building will be the boiler shop, 34 x 49 feet, while the box shed facing Water street will be 31 x 72 feet. There will be a pattern storage building 52 x 34 feet and a pattern shop 35 x 20 feet, two-storeys high. The company will install its own electric light plant.

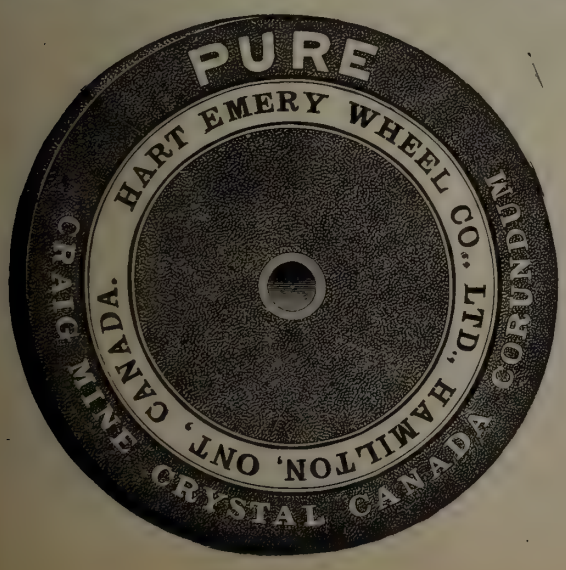
The Capstan Manufacturing Company, 30 Jarvis street, Toronto, have secured some very large orders from lumbermen for the supply of the lumber camps with mince-meats, baking powder, spices, extracts, etc., for the next season. This company is doing quite a large business in the supply line and are now filling orders for coffees, mustards, flavoring extracts, sauer kraut and sausage meats. The particular neat and clean manner in which the goods are put up is in marked contrast to the years when "any old thing" was good enough for a lumber camp.

There is no better evidence of the satisfaction which the "A B C" kilns give than the fact that the American Blower Company are continually in receipt of duplicate orders from their customers. We recently noted in our columns that they were furnishing another lot of kilns to the Mengel Box Company, of Louisville. Still another order from these people is now upon the books of the Detroit concern, as well as an order for a duplicate kiln from the Otter Creek (Fla.) Lumber Company, for whom they installed a kiln a short time since. The Walsh Mfg. Company, of Frederic, Mich., and the Tuna Mfg. Company, of Bradford, Pa., have also ordered "A B C" kilns.

"What have you got that sign 'Hands Off' posted outside your works for?" asked the curious individual. "Because," returned the jocular mill owner, "my men are on strike."

Mr. Henry M. Whitney, of Boston, has been elected president of the Newfoundland Timber Estates Company, recently organized to operate in Newfoundland. The company controls 1,760,000 acres of timber land, owns seven mills, and is capitalized at $4,500,000.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART EMERY WHEEL COMPANY, Limited, Hamilton, Ont., Can.

WOOD PULP DEPARTMENT

THE PULP INDUSTRY OF QUEBEC.*

By F. W. EVANS.

For the economical production of pulp three things are virtually necessary, an abundant supply of spruce, never failing water powers, and good shipping facilities. The province of Quebec possesses them all: Our black and white spruce forests are larger than those of any other country in the world, in fact the only two that can be compared with it are the United States and Scandinavia, and both these, more particularly the United States, are rapidly depleting their wood supply, while the province of Quebec has enormous areas which are practically untouched. The failure of the wood supply in the United States, however, constitutes a danger to this country. American paper mill owners, realizing the possibility of a curtailment and even a stoppage of their supply of raw materials, have been looking across the border for relief, and in addition to purchasing wood from jobbers, have been buying up immense areas of timber limits, building mills for sawing and peeling the wood, and are shipping it by rail or boat to their mills across the line. To the casual observer this appears a desirable business—to sell our wood and at the same time clear our lands, and prepare them for the plough, but such a conclusion is very superficial. Pulpwood exported as such represents a value of about $4.00 per cord to the Canadian, the same cord of wood if manufactured here into a ton of mechanical pulp is worth about $12, a large part of which is for labor. A ton of chemical pulp requires two cords of wood, and is worth about $30.00. If therefore the pulpwood exported last year to the United States had been manufactured into mechanical pulp, the province would have been over $3,000,000 richer, and the gain would have been still greater if made into chemical pulp. Nor is the loss sustained by the country in exporting raw material instead of more or less finished goods the only one. Canada is endeavoring to sell pulp and paper to Great Britian particularly, and in a less degree to Germany and France, the Americans are trying to do the same, and are therefore competitors in the same market—we are to-day supplying them with raw material to produce the pulp and paper to compete with us. But even this is not all, this industry in the United States is practically a huge combine and their policy is to limit the amount of paper and pulp on the home market to a specified quantity and slaughter the balance in foreign countries; so that the Canadian manufacturer often has the mortification of seeing American-made paper and pulp for which the raw material has been furnished by Canada, going to Europe, perhaps in the very same steamer as his own, to undersell him in that market.

There are in the United States at present 255 pulp mills, mechanical and chemical, producing daily some 8,450 tons, or over two and a half million tons per annum. This means a consumption of about 13,000 cords of wood daily, or nearly four million cords per annum. Of this it is computed that the province of Quebec furnished last year about 400,000 cords, and this will be nearly doubled in 1903. It is, however, most difficult to get accurate figures of the quantity and value of pulpwood exported annually, as the government returns are useless, much of the wood going out as cord wood. Some idea of the rapidity with which the wood lands are being denuded of timber may be gained when we consider that the consumption of wood in the United States last year for the production of pulp would have taken the timber from an area of over 1,100 miles, for a width of over three miles, and this consumption is rapidly increasing.

In spite of the lack of assistance in this direction from successive governments, whether Conservative or Liberal, the pulp industry has grown very rapidly in the province of Quebec. In 1880 there were a few scattered mills whose combined output did not exceed 9,000 tons per annum, and of which the only ones of any importance were those of the Canada Paper Company and W. & F. P. Currie, now the Dominion Paper Company. To-day there are in the province 27 mills, the estimated output of which is about 280,000 tons per annum.

Here, then, is an industry which in twenty-three years has increased from an output of 9,000 tons to over 280,000 tons, which when the mills now projected or under construction are completed will reach over 330,000, and yet is only really in its infancy when its future possibilities are considered. In 1901 Great Britain imported one half million tons of pulp valued at eleven and three quarter million dollars, of which Canada furnished 13 per cent., or just exactly double the proportion we had exported there two years previously. The United States in the same year took from us 51,000 tons, valued at $1,635,000, and we appear to have furnished about 79 per cent. of their total import of wood pulp. Our exports to other countries were inconsiderable, totalling only about $65,000. It would, therefore, appear that we have in Great Britain an unlimited market for wood pulp, for if the whole output of the mills now operating and under construction in the province of Quebec were shipped there, we should only be furnishing about 60 per cent. of her imports, and as I have already shown that Canada, and more particularly this province, has all the requirements for the production of the best pulp at the lowest possible price, we should take every means to conserve our raw material and not allow it to be sent out of the country to aid our rivals to successfully compete with us.

*Abstract of a paper read before the Insurance Institute in Montreal.

PULP AND PULP WOOD DUTIES.

Apparently the pulp trade have decided not to accept as final the decision of the Board of Classification of the United States General Appraisers rendered March 23rd last. The Board on that date upheld the action of American customs officials in levying a countervailing duty on wood pulp imported from the province of Quebec. F. W. Meyers & Company, of Rouse's Point, N. Y., representing wood pulp interests of the United States and Canada, engaged H.J. Cockinham, of Utica, to bring the question before the Board of Appraisers for review. At the hearing a few days ago he submitted evidence which he maintained warranted the Board in modifying its former decision sufficiently to hold that pulp wood cut on private lands in Quebec should be exempted from a countervailing duty when imported into the United States. Mr. Russell, of the Laurentide Pulp Company, Grand Mere, Que., said that about 52 per cent. of the pulp wood used by his company was cut on Crown lands and the rest on private lands. The Board will render a decision shortly.

Rossed pulp wood is the subject of a dispute between the importers thereof and the United States Treasury Department. On a quantity of rossed or peeled wood recently imported from Canada by the Remington-Martin Paper Company, of Norfolk, N. Y., the collector levied a duty of 35 per. cent., he doing so, it is said, under instructions from the Treasury Department at Washington. The action aroused the pulp and paper manufacturers of northern New York, who appointed a committee to prepare and forward to the Treasury Department a statement of the position of the manufacturers in the matter. Heretofore pulp wood in all conditions has been imported free of duty. The imposition of a duty would indicate that the rossing of pulp wood is considered a process of manufacture. Should the action of the customs officer be confirmed it will add about $3 a ton to the cost of producing paper.

Since the above was written the Treasury Department has issued an order directing that Canadian rossed wood be admitted free of duty until otherwise ordered.

PULP NOTES.

The employees of the Riordan pulp mills at Hawkesbury, Ont., have been given an increase of ten cents a day in wages.

It is reported that the two pulp mills on the Sissiboo river in Nova Scotia will be closed down until the market for pulp improves.

It is rumored that the MacLaren Company contemplate the erection of paper mills adjoining their pulp mills at Buckingham, Que.

It is reported that the Laurentide Pulp Company, of Grand Mere, Que., will double the capacity of their pulp mill at an early date.

Mr. Forbes Wood, superintendent of the pulp mill of the Carew Manufacturing Company at Holyoke, Mass., has been appointed superintendent of the Toronto Pulp & Paper Company's mills at Cornwall, Ont.

Price Bros. & Company, of Quebec, have their pulp mill at Rimouski nearly completed. It is believed to be

their intention to eventually engage in paper making, as experience has shown that there is little or no money in pulp where a long haul is involved.

The formation of a chemical wood pulp syndicate in Austria-Hungry is still engaging attention. The idea is to reduce production and advance prices. Some opposition is being shown by paper makers, who have petitioned for a concession to erect pulp factories of their own.

It is reported that the Newfoundland Timber Estates Company, in which B. F. Pearson, of Halifax, and H. M. Whitney, of Boston, are interested, will at once construct a pulp mill of 100 tons capacity daily on the line of the Reid Railway in Newfoundland, where the timber limits are situated. Several saw mills may also be erected.

A British patent relating to an improved drying felt for paper machines has been granted to E. Rudiger. The distinguishing feature is that felts are made in the form of double fabric, the upper welt consisting of soft spun yarn capable of being milled, while for the lower welt firm yarns are used which have as little capacity of extension as possible, and which may be furnished with a special strengthened lining.

The Pentecost timber limits, situated on the north shore of the St. Lawrence river, a few miles west of the Seven Islands, have been acquired by John McLennan, of Syracuse, N. Y., and other American capitalists. The syndicate has also acquired from the government several water powers which remained in the hands of the Crown after the limits were acquired by their former owners, Gagnon & Frere. The agreement with the government provides that at least $300,000 shall be expended within three years in developing the property. It is said to be the intention to build a pulp mill.

The erection of the proposed pulp mill at the Chaudiere, by the Ottawa and Hull Power Company, has been deferred pending the settlement of the litigation and dispute over the rights to the water power privileges on the Ottawa river. The company had the pulp mill plans in hand, and John Kennedy, hydraulic engineer, of Montreal, had been engaged to look after the development of the power. As soon as the question of possession of water power privileges is settled, the company will proceed with work on the pulp mill provided they are satisfied that they will be able to develop enough power.

The Paper Trade Journal has been asked the following question: "Spruce being the principal wood used both for manufacture of ground wood and sulphite pulp, we will call the producing qualities of spruce as 100 per cent. for the sake of illustration; also the production cost of both kinds of pulp from spruce 100 per cent. What is the relative cost of production and the amount of wood necessary, as compared with spruce, of fir, poplar, red and white hemlock and sapling pine?" Perhaps some of our readers will volunteer information.

Hon. Mr. Parent, Premier of Quebec, recently stated in the House that out of the 89,427 cords of pulp wood cut within the province during 1901-1902, on which no timber dues were collected, 11,045 cords were subject to a tax of 40 cent. The amounts paid were: Belgo-Canadian Pulp Company, $1,039.20; Chicoutimi Pulp Company, $1,754.60; Ouiatchouan Pulp Company, $2,288.80; Riordan Paper Mills, $22,088.80; James McLaren Company, $1,586.40; E. B. Eddy, $2595.60; Warren Curtis, $5,295.65; J. E. Atkinson, $778.05; John Breakey, $95.55.

An examination for cullers will be held by the Province of Quebec at Hull on Monday, July 13th.

MAPLE FLOORING.

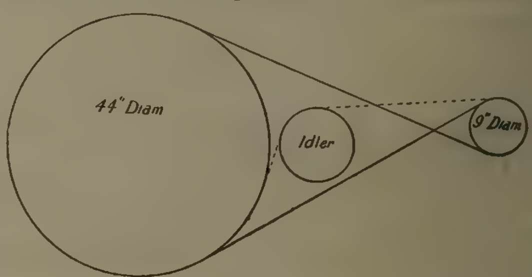
The secretary of the Maple Flooring Manufacturers' Association of Michigan furnishes interesting facts and figures about that comparatively youthful industry. Architects well remember what a time they used to have in getting a good hardwood floor down. In the first place, it was a long hunt to find the kind and grade of lumber wanted; then, even if machined with unusual care on the best molding machine to be found, it was far from uniform, owing, it is said, to the fact that the harder woods in passing through caused the machinery to give in some way, so that if one cut off an end of a given piece that appeared all right, it was a chance if it matched well in the other end of the same piece. But after all this, when a workman undertook to complete the dressing process begun by the machine, it seemed as if the troubles had just begun—the cost of laying and dressing smooth by hand would perhaps nearly double the cost of flooring delivered at the building. So, therefore, when the maple flooring, thoroughly dry and well finished by special machinery, was placed on the market it made its way very rapidly. It was true, squared at the ends and so well dressed that no plane need be used after laying, a touch with the cabinet scraper here and there being all that was required. This improved way of placing the goods on the market originated in the west.

Well-made hardwood flooring was at first to be found in maple only, but now several kinds of hardwood are in use. Oak, which is very desirable for house floors, was some time in finding its way into the market in this form, if we remember, but now oak is to be had with the rest, and much birch is used, while beech is finding its way into stocks to some extent. Statistics as to output of "maple flooring" probably cover all these varieties, and all thicknesses. Originally most of the output was "7/8" stuff, but now quite a bit of "3/8" is sold for laying over old house floors, and although this is tongued and grooved, those who lay it recommend it as not weakened thereby so as to give them trouble in putting it down. However, "1/2" flooring is making its way into the market, and it will be readily seen that if skillfully tongued and grooved this thickness should prove very desirable for house work, for while it would have little durability in soft or loose-grained woods, one would chance it to wear many years in maple. Some 90 per cent. of all flooring sold in the Northwest is "2 1/4" face, while Eastern states, Ohio, and the export trade, use most of the "3 1/4" face. One large concern makes "1 1/2" face from strips that will not make "2 1/4," and sells it at about the same as the "2 1/4," but a demand for the narrower in large quantities would raise the the cost to something like $5.00 per M. above the cost of "2 1/4."

Maple appears to stand at the head of the list for real wearing qualities. It is averse to dampness, and there are places where white oak would stand much longer. Opinions differ as to relative durability of the maple and birch in damp places and beech is too little known to say how it would behave in damp situations. Oak stains easily, but the experienced housewife has most likely learned that she can have the stains removed from oak more easily than from the others. Owing also to its more open grain, marks and scratches show less in its surface than in the smoother and closer grained woods, while its color is a great advantage to its appearance in house floors. We would guess that beech trees would furnish flooring of more uniform color when laid and finished than either maple or birch.

A BELT PROBLEM.

Sketch shows how I overcame the trouble we had with a short cross belt. The drive pulley is 44 inches and the driven pulley 9 inches. The distance between centers is 5 feet 8 inches. I believe every experienced man will admit this would be a hard belt to run. The loose pulley is 1 inch smaller in diameter than the tight one. By placing the



shaft out enough to make the belt run well on the tight pulley, it was simply impossible to keep it on the loose pulley. The full lines show how the belt did cross; the dotted lines show how it crosses now after putting a 12-inch idler on the slack side of belt. We haven't a belt in the shop that runs better, nor is it possible to get one that does.—"C. H. B.," in the Wood-Worker.

THE MILNER PETROLIA WAGON CO., LIMITED PETROLIA CANADA

LOSSES OF LUMBERMEN.

Many lumbermen sustained heavy losses by the recent forest fires in New Brunswick. It is estimated that 40,000,000 feet of timber was destroyed in York county. H. F. Eaton & Sons are probably the heaviest losers, 12,000 acres of their limits along the Upper Magaguadavic lakes having been burned over, in addition to a large area in the State of Maine. Other losses are estimated as follows: James Murchie & Sons, in York county, along the C. P. R. and on Magaguadavic lake, 12,000 or more acres; Major J. D. Chipman, 6,000 acres near Kilburn lake, in York county; F. H. Todd & Sons, 3,500 to 4,500 acres.

SPACING AND LENGTH OF BAND SAW TEETH.

The spacing of band saw teeth, as used on bands and band resaws, varies from 1 to 2 inchees, but the greater majority run a spacing of about 1½ to 1¾ inches. There is nothing to recommend a longer spacing than the above, unless it is desired to run a long tooth with extreme hook. In such case, a 2-inch spacing may be used, with throat from ¾ to 1 inch deep on a log band saw and from ⅜ to 9-16 on a band resaw, with large rounded gullet, quite similar to that run on a circular saw. Shorter teeth are usually preferred for hardwoods and frozen timber than are used for soft woods or summer sawing. Thus a ½-inch tooth is generally used for hardwoods in winter and a 9-16-inch in summer, while the teeth for soft woods range from ½-inch to ¾-inch or longer. A style of throat that is very popular in many sections, and especially among the cypress manufacturers, is the rather long throat, with the base line about horizontal.

It is impossible to suggest that any particular style of tooth is best adapted to any particular wood, for the reason that all shapes of teeth are apparently used with success in different woods. Expert users of band resaws find that for box-board work not over 12 inches wide, a spacing of 1⅝ is satisfactory. In work demanding a minimum saw kerf and a moderate speed for saw, as in sawing picture backing, etc., a 2-inch spacing is found good. The same is true of resawing panel stock and hardwoods. Kiln-dried hardwood such as oak, hard maple, etc., tends to dull the saw very rapidly, unless the feed is well regulated, and it is well to have the saw stand a fair feed instead of simply allowing it to rub the dust away. Careful feeding of the saw in kiln-dried hardwoods will enable the saw to do good work in cutting considerable stock, where feeding without exercise of careful judgment may dull the saw in a few minutes.—PACKAGES.

The Davison Lumber Company is the name under which the American syndicate will operate the timber properties of E. D. Davison & Sons, of Bridgewater, N.S. The president of the company is J. M. Hastings, of the J. M. Hastings Lumber Company, Pittsburg, Pa.

INMAN POULSEN & Co.
Oregon Pine Lumber.
Annual Output 75 million feet.

PORTLAND, OREGON, January 8th, 1903.

ZIMMERMAN - WELLS MACHINERY CO.,
Portland, Oregon.

GENTLEMEN, In reference to your inquiry regarding the workings of the Ray Patent Steam Feed purchased from you about eighteen months ago, we have this to say regarding the feed, that it certainly is not only the best feed that we have ever used, but undoubtedly has no equal to-day on the Pacific Coast.

We have dropped as high as twelve 24-ft. 1" boards in one minute. In doing this, the carriage would have to travel about 650 feet and stop and start twenty-four times in one minute. The weight of the carriage, head blocks, and log would be about ten tons. This would give you a pretty good idea of the Power exerted by the feed in handling a load of that size at such a velocity.

We have run this feed night and day since we have had it, continually, and the same ropes are still in service that were put on when the feed was mounted. Everything about the feed seems to be in as good condition to-day as the day we got it. We would not take it out and put back our old feed for ten times the cost of the new one. You will see that we are more than pleased with it.

Yours truly,
INMANPOULSEN & Co.

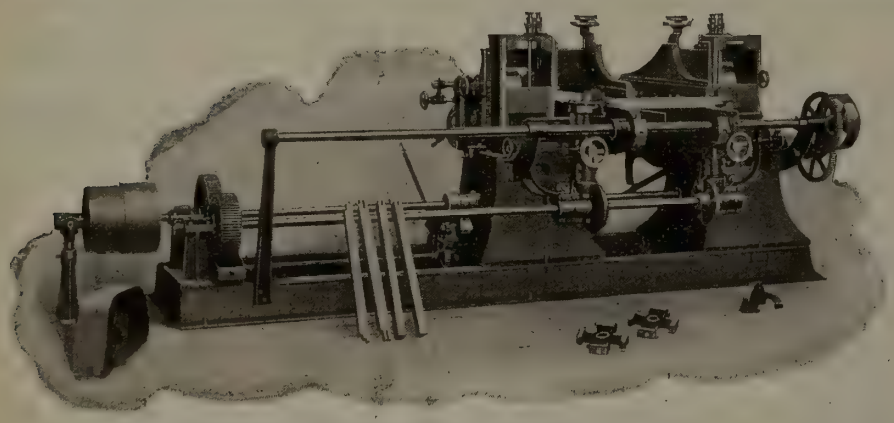
Detachable Chain Belt
—AND—
CONVEYING MACHINERY

William R. Perrin & Company
TORONTO, CANADA.

The first of its kind on the market. New and original and first introduced by us
E. B. HAYES MACHINE CO., Oshkosh, Wis.



When a new and improved machine that has great merit in it like this one is put onto the market, often times other machinery manufacturers will recognize the fact that it will be a good seller and they will try and start in to copy, of course providing they can do it. We expect it may be the case with this machine, but we know that all the mill men purchasing machines will want the Original, for many mill men in the past have met with great disappointment in buying copied machines. Write for full information.

OVER 35,000 IN USE
IN EVERY KIND OF TIMBER

THE ONLY SUCCESSFUL
INSERTED-TOOTH SAW

THE TWENTIETH CENTURY SAW

Our Chisel-Tooth Saw is adapted to all kinds and conditions of sawing, and does equally well in hard or soft woods, winter or summer, large or small mills.

It increases the output of the mill, requires less power and makes better lumber at less cost than any other saw.

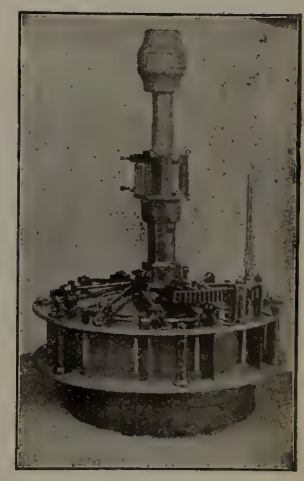
Do You Need a Turbine?

Now is the best possible time for replacing your old, worn-out wheel with a new Turbine that will save Worry, save Time, and make Money for you. If you want a well built wheel, a wheel that will give you steady reliable power every day, a wheel that will save water, a wheel that will last you a lifetime, and that is sold at a reasonable price, then write us for catalogue and prices on the



Standard Leffel and Vulcan Turbines.

They are better developers to-day than ever before, and are growing in popularity, as our order books show.

We have now for distribution our new **SAW** and **SHINGLE MILL MACHINEY CATALOGUES,** with engravings and descriptions of our machines with their latest improvements. We will be glad to send you one on receipt of your address. You cannot buy a better Portable Mill than the "Lane Improved".

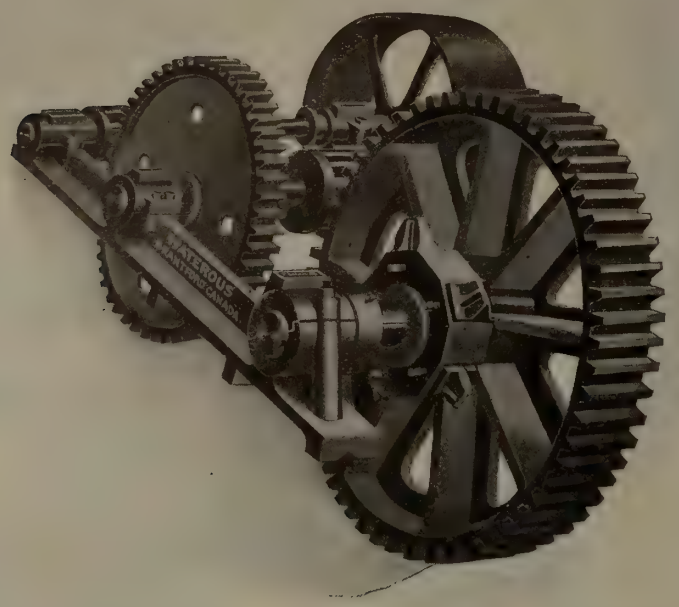
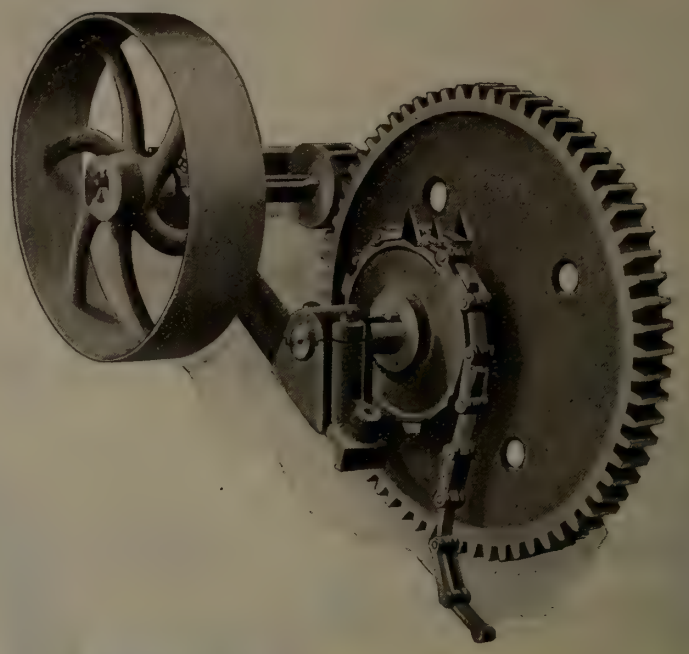
ENDLESS CHAIN BULL-WHEELS OR LOG JACKS



WATEROUS NO. 0 DOUBLE-GEARED LOG JACK

With spur gear to drive from shaft running across mill.

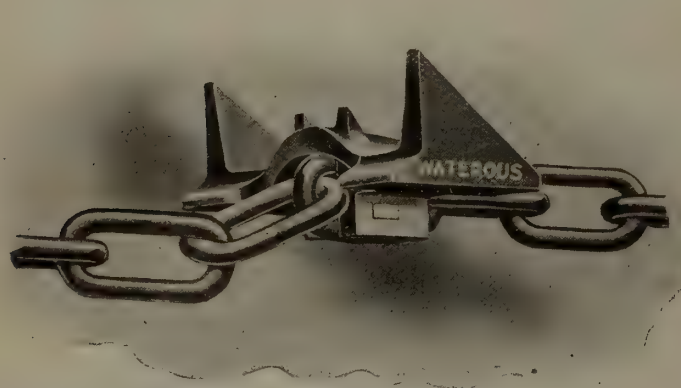
When needed to drive from shaft running lengthwise of mill, we replace smaller spur gears with bevel gears or frictions placed outside of iron frame.



WATEROUS NO. 1 SINGLE-GEARED LOG JACK

With No. 86 log chain. Cast steel spurs and centre links, steel side links, 6″ pitch. No. 80 log chain is the same style but heavier with drop forged center links, 8″ pitch.

PULLEYS CAN BE READILY REPLACED BY STRAIGHT FACE FRICTIONS.



Cable Chain with Cast Iron Log Spurs

Chilled wearing shoes 4x12″ on each side round link. Made 10″, 12″, 14″ wide for 1″, 1¼″ and 1½″ chain. Can't turn on chain.

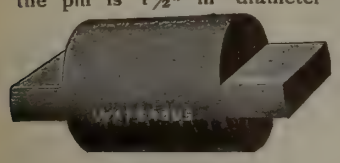
No. 86 Steel Chain (Cast Steel Log Spurs).

Rivets ¾″, side bars 1¾x⅝″, 8″ pitch, center (cast steel) 2¼x6″ pitch. Spurs 9″ point to point.

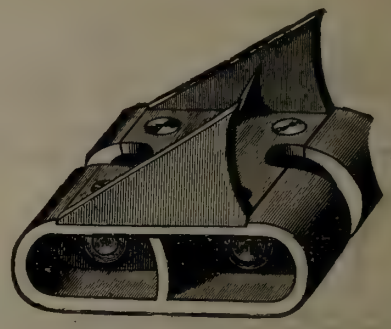
No. 80 Steel Chain

Is 8″ pitch similar to above, except that solid link is a drop steel forging, the pin is 1½″ in diameter (like illustration) and is fixed in position connecting side bars, presenting a large wearing surface for solid link. Side bars 2x1½′

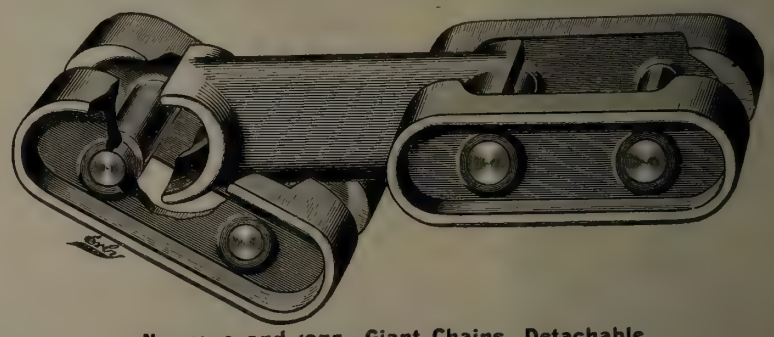
Taking a safety of 4½″ this chain gives a 10,000 lbs. working strain. Log spurs same as No. 86 or of heavy forged steel, any spread desired.



PIN OF NO. 80 CHAIN.



Malleable Log Chains—Detachable, readily applied.



No. 1050 and 1075—Giant Chains, Detachable.

Not recommended for salt water—but there is no better chain for fresh water.

Forged Refuse Chains

R. Double.

Outside width 12½ in.—Made of 1½x⅜ in.

The 10 to 15 Tons of Ewart Detachable Link Belting we carry in stock insures prompt shipments.

R. H. SMITH CO., LIMITED

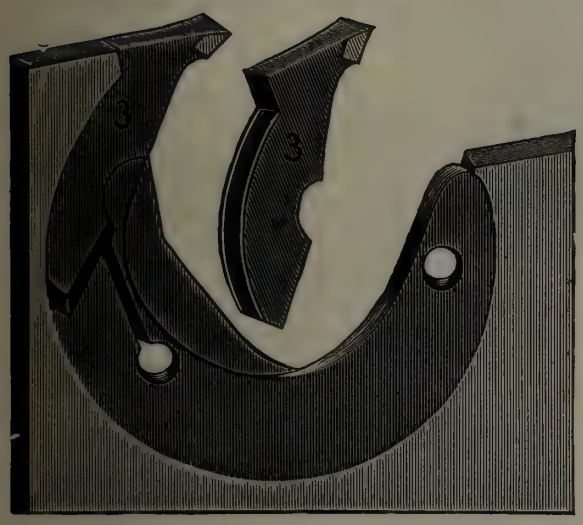
St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simond's Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

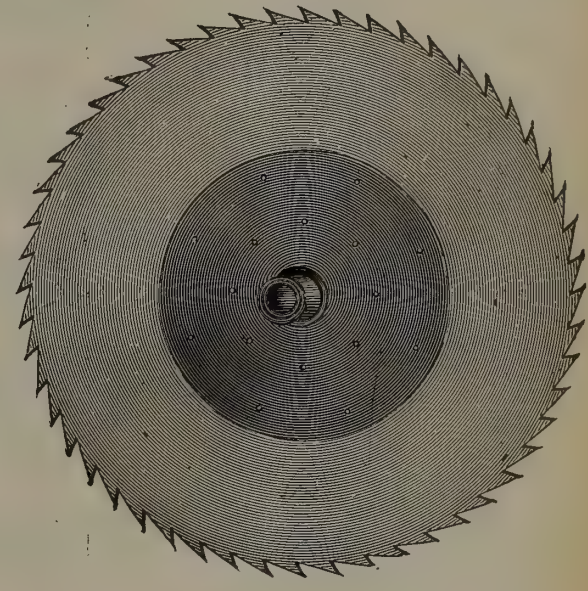
Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

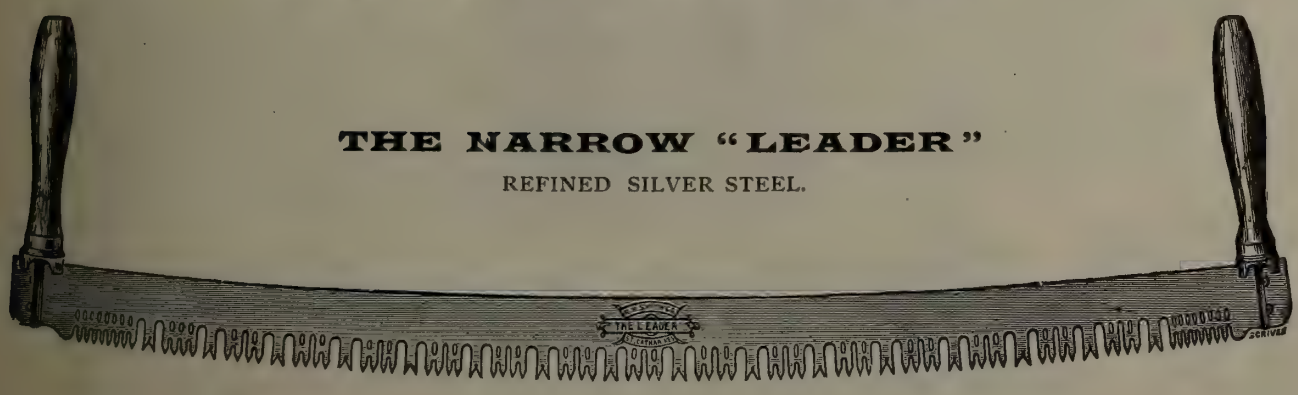
SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.



CROSS-CUT SAWS



THE NARROW "LEADER"

REFINED SILVER STEEL.

The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Watson's Portable Air Tight Baker

The most convenient stove ever constructed for use in the Woods, on the Drive, in the Camps. Bakes as perfectly as the finest range.

Read What Experienced Woodsmen Say of it:

"We used your Portable Woods Baker all last season with a crew of men in the woods, travelling from place to place. We found it convenient to handle and the best steel range cannot beat it in baking. It is a perfect baking oven and a success in every way.

The cooking is not affected by rain or weather and can be used outdoors or in a tent."

Yours truly,
MENOMINEE RIVER BOOM CO.,
Per Wm. H. Stephenson, Gen'l Supt.

We make these stoves in three sizes. Our No. 10 will cook for ten men; our No. 20 for twenty men, and No. 50 for from fifty to one hundred persons.

We want those interested in a stove of this kind to write us for full description and prices.

THE WORLD'S HEADQUARTERS FOR

Blast Grates, Edgers and Trimmers

The "TOWER" One-man Two-saw Trimmer.

The Simplest and Easiest Trimmer to Operate on the Market. With this Trimmer one man can easily trim the output of a mill cutting up to 30,000 ft. in ten hours.

The saws travel in unison, in opposite directions. Each revolution of the crank increases or decreases the distance exactly two feet.

The crank is journaled to one of the chain carriers. The operator thus shifts the saws and walks toward the board to be trimmed, simultaneously, thus combining two operations in one. This saves time.

The chain carriers are shifted by a DOUBLE rack and pinion—one in front and one in the rear. It is thus absolutely impossible for them to bind.

There are 2 feeds--one thirty feet per minute, the other fifty. The feed can be instantly started, stopped or changed—without stopping the saws—by simply shifting a lever. The same lever controls both feeds.

The arbor is of ample size. It has a total of six bearings, two of which are on the chain carriers. The arbor is thus always supported close to the saws, regardless of their position.

The drive pulley may be at either end or in the center.

Five sizes, cutting up to 16, 18, 20, 22 and 24 feet respectively.

We also manufacture :

The Gordon Hollow Blast Grate.

The TOWER 2 and 3-saw Edgers, Improved. For mills cutting not to exceed 20,000 feet in ten hours.

The TOWER EXTRA Edger. A larger and heavier edition of the TOWER, for mills cutting up to 30,000 feet.

THE ANSWER

Ask the best engineers and machinery builders that you know of, which is the best Babbitt Metal for all purposes they know, and they will certainly say the "SYRACUSE SMELTING WORKS" Babbitt Metal as it has stood the test for the last 22 years in the United States and 15 years in the Dominion of Canada.

Run no chances in using inferior metal, but ask your dealer for the "SYRACUSE SMELTING WORKS" Babbitt Metal, the largest manufacturers of Babbitt Metal and Solder under the British Flag.

Montreal, Can., New York, U. S. A. and Seattle, Wash.

NEW PROCESS OF UTILIZING SAW MILL REFUSE.

There is a new thing under the sun. It is the making of alcohol from wood.

We fancy that many of our readers will protest and say that there are scores of plants in America making alcohol from wood. But they would be mistaken. The plants to which they refer are making wood alcohol, which is not alcohol at all. It simply resembles alcohol in color, slightly in odor, and in the fact that it will burn, though with no such heat as results from the combustion of genuine alcohol. A better and more descriptive name is "wood spirits," which is used in France. Scientifically it is know as methyl alcohol, while real alcohol made by the fermentation of sugar is ethyl alcohol. Without attempting to be too technical, the chemical formulæ of these two commercial products may be of value.

Ethyl or "grain" alcohol is C_2H_6O. This maens that a molecule of alcohol is made up of two atoms of carbon, six of hydrogen and one of oxygen.

The formula for methyl or wood alcohol is CH_4O. That is, it has one less atom of carbon and two less of hydrogen.

Grain alcohol is comparatively innocuous, while wood alcohol is a virulent poison. Cases are numerous where people have drunk wood alcohol because they supposed it to be alcohol, and have promptly died. Wood alcohol has a large place in the arts, but grain alcohol has all the virtues of wood alcohol and many other besides.

To make real alcohol out of wood is from a practical standpoint a new thing. It has long been a fact well known to chemists that theoretically it should be possible to make alcohol from wood, for wood contains cellu'ose, and cellulose can be converted into sugar, and from sugar by fermentation is made alcohol. For thirty or forty years chemists have been at work on this problem, but they have always failed to make alcohol except at a cost greater than the value of the product, even if the laboratory experiments were enlarged to a factory scale.

Various methods have been used to convert the cellulose of wood into sugar. The most successful employed sulphuric acid, but sulphuric acid is a liquid, and to remove it from or neutralize it in the sugar solution resulting from the treatment of cellulose would cost more than the sugar or alcohol that can be deduced from it is worth. Chemists have not despaired, however, and have kept steadily at their work of investigation and experimentation, but it remained for Alexander Classen, of Aachen, Germany, who is Professor of Chemistry of the Aachen Polytechnic School, a leading chemist of Europe and privy state councillor of the German Empire, to devise a means by which the cellulose of wood could be converted into sugar without leaving associated with it substances which make it nugatory in its value. What this discovery was will be told in brief further on.

UTILIZATION OF SAW MILL REFUSE.

The manufacturing lumberman is interested in this discovery because it presents to him a method for utilizing the refuse of his lumber manufacturing operations —a method which does not lie under the suspicion of being liable to over-production, as is the case with a good many of the other by-products of wood.

Most saw mills are located where the refuse has no market value. The best that can be done with it is to use it as fuel, and that it is so used is a matter of course. In some mills located where there is no market for refuse, the slabs are burned under the boilers, and sawdust, edgings, trimmings, etc., is the refuse. In most modern mills, however, automatic furnace feeders are used, in which case sawdust is the basis of the fuel, mixed with larger refuse to loosen it up. The amount of refuse varies greatly, but in any modern mill of large capacity it is probably in the neighborhood of twelve to fifteen per cent. of the actual contents of the log.

The utilization of this material at some profit shows double results. It not only makes a profit out of what otherwise is thrown away, but also gives returns on a cash investment. Sawdust and slabs cost something to bring to the mill in the log, in some instances this expense being an important part of the entire cost of a saw-mill's output. To the intelligent lumberman the possibility of saving something from this waste is attractive.

Here comes in "grain" alcohol as a by-product of wood. There is no danger of over-doing the grain alcohol business provided only that a slight saving can be made in the cost of production.

WOOD VS. CORN.

The Classen process, it is claimed, makes at least fifty gallons proof alcohol from a long ton of dry sawdust. About four and a half gallons can be made from a bushel of corn. Reduced to gallons of alcohol, one proof gallon is made from about two-ninths of a bushel, or 12.4 pounds of corn. It can also be made, at no greater, and probably a little less expense for the process, from forty-five pounds of saw-dust.

Put it in another way. It takes 11.1 bushels of corn to produce the same amount of alcohol as can be obtained from a long ton (2,240 pounds) of dry sawdust.

The Classen process is owned in the United States by the Lignum Inversion Company, of Chicago, which is to be succeeded by the Classen Lignum Company, that will take over the rights of the former and increase its scope. The Lignum Inversion Company has had for about four months in almost constant operation an experimental plant in Highland Park, near Chicago.

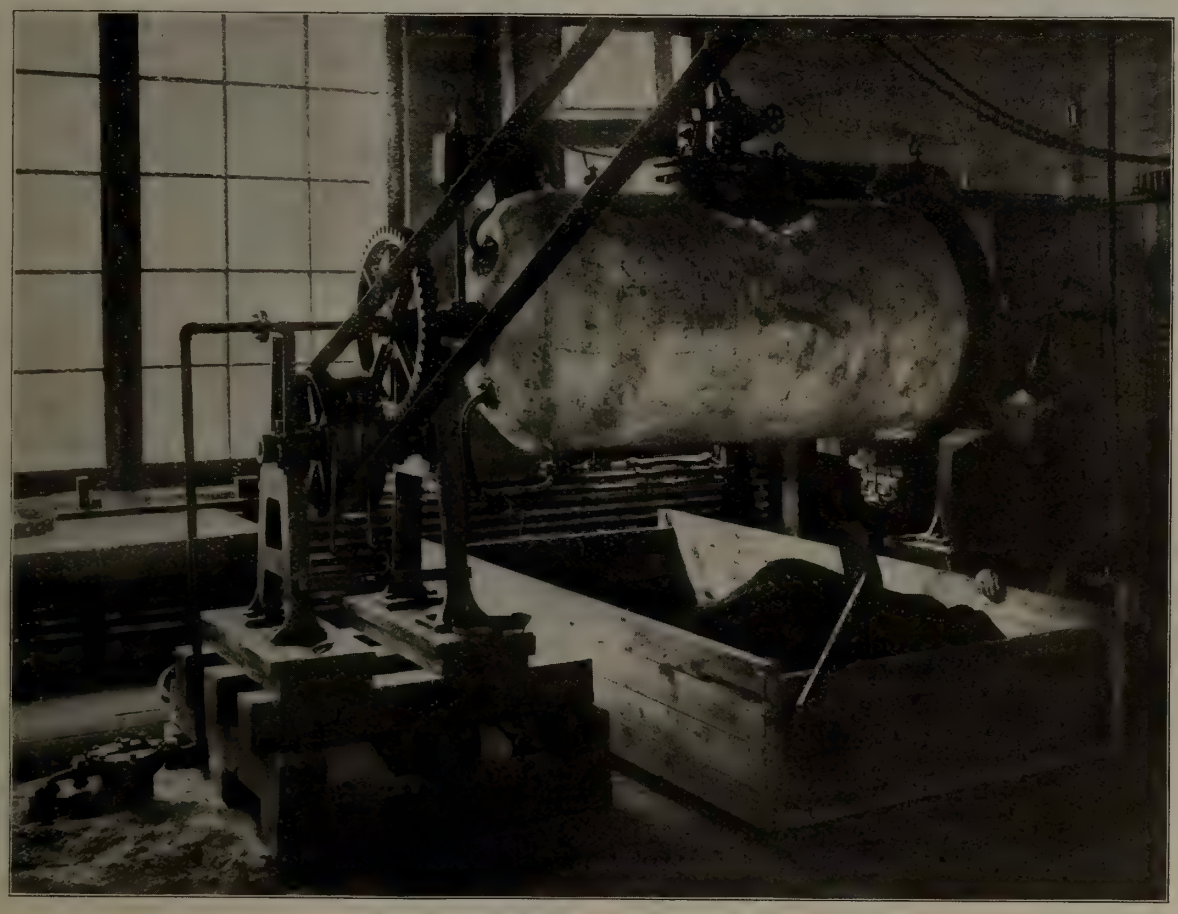

FIG. 1.—ROTARY DIGESTER FOR CONVERTING CELLULOSE OF SAWDUST INTO SUGAR.

DESCRIPTION OF THE PROCESS.

As stated at the beginning, the successful production of glucose or sugar from wood cellulose as a laboratory proposition had preferably been by treating it with sulphuric acid heated, but the sulphuric acid is a liquid and could not be removed from the resulting solution except at such great expense as to make the process commercially a failure. Professor Classen conceived the idea of using sulphurous instead of sulphuric acid. Sulphurous acid is a gas. The result is, that when given an opportunity under a moderate degree of heat, it releases or blows itself out of the wood, leaving the treated wood practically free from substances that will prevent fermentation of the contained sugar.

A plant for the manufacture of alcohol from sawdust consists first of the acid apparatus in which the necessary solution of the sulphurous acid gas in water is made, and where the gas when released from the boiler or digester is reabsorbed in the water and thus saved. A view is given of the apparatus used in the plant at Higland Park. Next is a revolving boiler or digester similar to that used in making chemical pulp. Next comes an exhausting battery, which is a series of tanks

through which water may be passed, washing out the sugar in the wood which is the result of treatment in the digester by the sulphurous acid gas. Next comes the neutralizing vat or vats in which various acids in the solution are removed or neutralized by the addition of carbonate of lime. Then comes the fermenting process and then the still room. The fermentation and distillation are precisely the same as in an ordinary distillery.

The process, as briefly described, is thoroughly to mix the sawdust with the sulphurous acid gas and water so that all parts of it are penetrated by the gas, thus converting a portion of the cellulose into sugar. This sugar, of which about 85 per cent. is fermentable, remains in the sawdust. This sawdust is then introduced into the exhaustion tanks where the water passes through them, the method being just like the making of drip coffee. The water simply passes through the sawdust, washing out the sugar.

The digester or boiler in which the wood is first treated is a revolving drum of iron, lined with lead to resist the action of the acids, then surrounded with a steam jacket by which it is heated. This drum is nearly filled with sawdust—in the experimental plant about 400 pounds being a charge. Into this is put about one-third of its weight of the acid solution. Then steam is turned into the jacket and the drum is set revolving slowly so as thoroughly to mix its contents. The steam in the outside jacket heats the sawdust and other contents of the digester to a temperature of about 295 degrees Fahrenheit. This heat drives the gas out of the water into the wood and converts the cellulose into sugar, the gas penetrating all the particles of wood and acting directly upon the cellulose. The pressure inside the digester, caused by the expansion of the gas, is 100 pounds or more to the square inch. This process takes three hours.

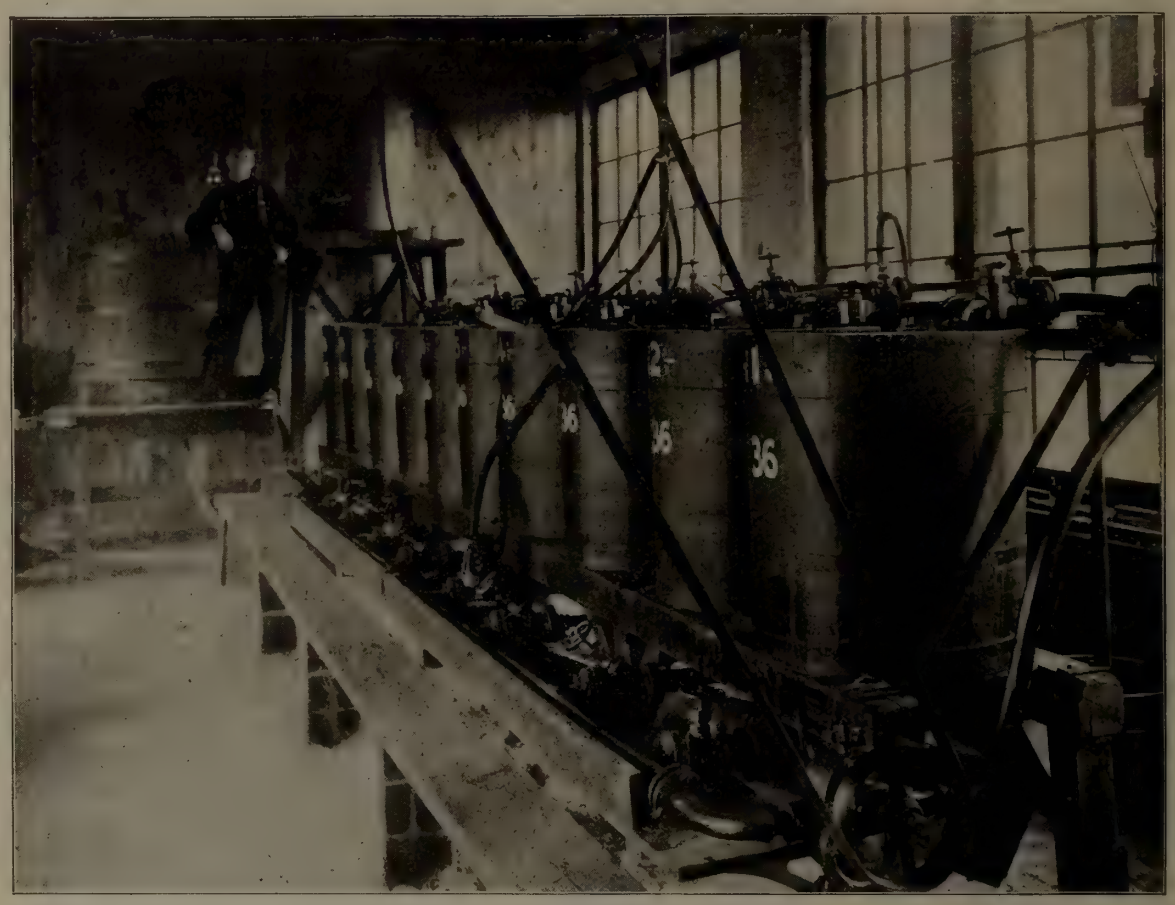

Fig. 2.—Exhaustion Battery For Extracting Sugar From Sawdust.

The sulphurous acid gas and steam are then blown off from the cylinder into absorbing tanks in the acid room, thus saving 75 to 80 per cent. of the gas, which is then ready to be used again. The digester and the surrounding steam jacket having been blown off, the cover is removed and the digester emptied of its contents, which now resembles brown coffee more closely than anything else. This material contains the wood fibre and the converted cellulose, now sugar, and various other separated and partially separated products produced by the action of the acid and the heat upon the wood. The process is not carried as far as in pulp making, to which it is somewhat similar, the object being to carry it only far enough to convert as much as practicable of the cellulose into sugar and to stop short of the point where the sugar by reversion would be destroyed.

The exhaustion battery—so called—in which the sugar is washed out of the sawdust, contains ten tubs or vats, in this case of 36-gallon contents each. Here it might be said that in the commercial plant it is proposed to treat a long ton of dry sawdust at one time and there may be as many digesters and sets of exhaustion batteries as is necessary to handle the available supply of sawdust or other finely divided wood.

These vats are so connected by pipes and valves with each other and with the pump that the contents of any one tub can be pumped into another. The principle of working is to bring the fresh sawdust in contact with the solution already containing sugar in order to make a solution as strong as possible, and on the other hand to treat the nearly exhausted sawdust with pure water in order to complete the washing out of sugar. This is a continuous process, that is to say, when the contents of a vat has been treated with ten washings it is emptied out and refilled with fresh sawdust. Before emptying its charge it receives fresh water, and after refilling it receives the strongest solution.

The result of this process is a sugar solution which contains 450 to 500 pounds of sugar from a long ton of dry sawdust. This sugar is of two sorts, one of which is pentose, non-fermentable, the other part, amounting to 70 to 80 per cent., being capable of alcoholic fermentation when treated with yeast.

This solution from the exhaustion battery is pumped into a receiving tank, where it is neutralized with carbonate of lime, which is necessary to prevent the acid from killing the yeast to be added for the purpose of fermentation.

From this neutralizing tank the solution is pumped into the fermenting vats and is now called "mash." Then yeast is added to the solution, which is held at the proper temperature, and in a very short time fermentation begins. When it is completed, the product passes to the still room, a view of which is given, which is equipped with still, condenser, etc., this part of the process being in no wise different from that ordinarily used in distilleries.

The result is about 50 gallons of proof alcohol or 25 gallons of absolute alcohol from a long ton of sawdust.

This plant was for three months under the oversight of J. H. Long, professor of chemistry in the medical school of Northwestern University, Chicago, and President of the American Chemical Association. This gentleman spent about one month in personal management of the plant, of which he was given complete charge, and the remainder of the three months it was under his control through an assistant. The report of Prof. Long was a strong recommendation of the process.

It should be said that something over 24 gallons of absolute alcohol have been secured from a ton of sawdust up to this date, but that improvement in the output has been so constant that it is believed that with the further development and improvement of the system probably 30 gallons and perhaps more can be secured; but the company is making no claims as yet of more than 25 gallons of absolute or 50 gallons of proof alcohol to the ton. This product is enough to secure the entire approval of both scientific and practical men who are familiar with the manufacture of grain alcohol and the marketing of the same, and who state that nothing more is necessary to insure profitableness under the process, provided, of course, sawdust can be bought cheaper than corn on the basis of the alcohol output from each.

LOCATION IN RELATION TO SAW MILL.

The ideal location of such a plant is alongside a saw mill of large capacity with a considerable life ahead of it guaranteed by timber supplies. This location should not be in a large city where there is a good market at present existing for mill refuse, though a Classen distillery could compete for the output of saw mill waste under ordinary market conditions. In a mill which uses the greater part of its sawdust product for fuel a change would have to be made in this particular. In such cases automatic furnace feeders are used and perhaps the hog would have to be brought into requisition to supply chips to take the place of the sawdust.

The cost of plant is not heavy considering the value of its output, and with such practical results from an experimental plant a properly designed, equipped and built plant on a large scale should effect economies in labor expense and should increase the output per ton.

There is claimed to be absolutely no question as to the scientific practicability of this method of producing grain or ethyl alcohol from wood, and there is no question, furthermore, of its commercial practicability, as demonstrated by the plant already in operation.

VALUE AND USE OF THE TAILINGS.

A further consideration is as to what can be done with the exhaust sawdust and what its value is. In the various processes through which it is put it contracts in volume from 25 to 33 per cent., but, volume considered, its fuel value is apparently not changed. About one-fourth of the cellulose is removed and other properties taken out have no fuel value. Consequently, if the sawdust is still needed as a fuel it can, after treatment, be turned back to the mill and burned under the boilers as originally intended; but the residue remains unchanged and practically undiminished, the qualities which make it available for dry distillation.

The treatment of heat and acid has left it dead, inert, without apparent vitality or elasticity; consequently it can be pressed into briquettes without the use of an agglutinant or binder. A great deal has been heard lately of the manufacture of briquettes from sawdust, but invariably this process requires the use of resin, or tar, or something else, as a binder in order to hold them together. This is not necessary with sawdust after being treated with the Classen process.

These briquettes can be readily converted into a high grade of charcoal. If the process is carried on in retorts the by-products of the process can be preserved in the shape of wood alcohol, acetate of lime, wood tar, etc. The charcoal produced is of an unusally high character, both because of the purity of the material used and the uniform size of the briquettes, which make carbonization uniform.

This dry distillation of the tailings from the Classen plant is a distinct process, requiring a distinct equipment. Tests as to the manufacture of charcoal by the retort process referred to above show that the results are better than with wood ordinarily used.

SAW MILLS ADAPTED TO PROCESS.

It is apropos to explain to what class of mills the Classen wood distillation process is adapted. In the first place there should be a daily product, either of one mill or of several closely associated mills—preferably one—of at least 20 tons of waste a day, although a plant could be adapted to a smaller product.

Second, it should be a mill cutting exclusively one kind of wood. This is because hard and soft woods require a different degree of heat in the digester or boiler, and where the wood waste is composed of hard and soft woods the returns are not as great as they are where they are worked separately.

The company advise us that the illustrations shown herewith were prepared by the American Lumberman.

DEATH OF LIEUTENANT WHELEN.

News of the tragic death of Lieutenant George Hume Whelen, son of Mr. Peter Whelen, of the Sheppard & Morse Lumber Company, Ottawa, which occurred on July 25th, brought the deepest sorrow to a wide circle of friends and acquaintances. Deceased had reached Quebec with a raft of timber for the Sheppard & Morse Company. The raft had just been snubbed to the dock as the tide changed. The current swung the raft around towards the wharf and as it closed in Mr. Whelen saw that the raft was closing in on the ferry boat, which was lying alongside the wharf. He took up a pike pole and placing it against the side of the steel hull of the boat stood on the edge of the raft and endeavored to keep the weight from crushing in the boat. His pike pole slipped and he fell headforemost into the water. He immediately came up, when one of the raftsmen caught his outstretched hand, but not in time to pull him out, and the raft closed on him, crushing his chest between the boat and the timber. Death was almost instantaneous.

Deceased was a lieutenant of the Forty-Third Duke of Cornwall's Own Rifles of Ottawa, and was very popular. He was nineteen years of age and a young man of much promise. He had decided to take up the lumber business and spent last winter in the shanties for the Sheppard & Morse Company, his object being to learn every branch of the business.

He was buried on July 27th with full military honors, his regiment being present in good strength and all of the corps of the Ottawa brigade being represented.

DOMINION EXHIBITION.

Although the dates set for the Dominion Exhibition at Toronto are Aug. 27 to Sept. 12, the formal opening will not take place until Saturday, Aug. 29, when, under the rules, everything will have to be in place and ready for inspection by the public from 9 a. m. to 10 p. m. All the special features, including Kiralfy's great spectacle "A Carnival in Venice," will be given that day. The Exhibition will be considered officially closed at 10 p. m. on Saturday, the 12th of September, after which exhibitors must remove all their property from the grounds and buildings. No removals will under any circumstances be allowed before Monday morning, September 14th, except in the case of live stock, which may be removed after the parade of prize winners at 2 p. m. on Saturday, 12th September, and agricultural and horticultural products, which may be removed after 10 p. m. and 4 p. m. respectively on Saturday, 12th September, and poultry at 4 p. m. Friday, September 11th.

—The Howe Woood-Working Company, Limited, have been incorporated at Fredericton, N. B.

—Mr. William K. Grafferty, of the Montreal Lumber Company, has been proposed for membership in the Montreal Board of Trade.

SHAVINGS.

A redwood tree recently cut in California made 150,000 feet of lumber. Operators in the older sections of the country can hardly comprehend that one tree would furnish a day's work for a good sized sawmill.

The summer meeting of the American Forestry Association will be held August 25 and 26 in Minneapolis, upon the invitation of the governor of Minnesota and the city of Minneapolis.

After a hearing extending over a number of days and comparison of Minnesota coal and lumber rates with those charged by the railroads in adjacent states, the Minnesota State Railroad & Warehouse Commission has ordered a reduction of ten per cent. in coal rates and fifteen per cent in lumber rates on the roads within the boundaries within the state.

Owners of mills are interested in experiments that have been made with graphite as a preventative of scale in boilers. It is said that a small quantity of graphite mixed with water used in boilers will prevent scale formation, and that if scale is already in the boiler, the graphite will penetrate the old scale and decompose it, causing it to drop to the bottom.

FIG. 3.—ACID ROOM AND APPARATUS.

FIG. 4.—STILL ROOM AND APPARATUS.

TRADE NOTES.

A. J. Young, of Cache Bay, Ont., has purchased the wholesale stock of lumbermen's supplies, etc., of George Gordon & Company at Haileybury, Ont.

The J. S. Henderson Company, of Parrsboro, N. S., have just patented a new style of larrigan which is calculated to revolutionize this kind of foot wear. The company have this season manufactured upwards of 12,000 complete larrigans.

The Syracuse Smelting Works, Montreal, have lately received an order for 20 tons of high grade babbitt metal from the largest manufacturer in Canada. They are also turning out for exportation very large orders of babbitt metal, linotype and stereotype metal. We understand they employ about 60 men, who are kept busy day and night turning out rush orders.

LUMBERMEN'S CONCATENATED ORDER OF HOO-HOO.

The first organization of this association in Ontario was held at Toronto, July 7th. Much of the success of this forward movement is due to the efforts of Mr. Harlan P. Hubbard, the Vice-gerent of the Eastern District of Canada, and to Mr. Walter C. Laidlaw, of Toronto, both of whom were initiated into the mysteries of Hoo-Hoo on the other side of the line.

The organization of Hoo-Hoo is unique in the fact that it is strictly a trade organization and limits membership to those engaged in the lumber business or those directly interested in said business within prescribed limits. The fact should be remembered that all lumbermen are not Hoo-Hoo, but that all Hoo-Hoo are lumbermen or identified with the trade in some way.

The only general meeting of Hoo-Hoo is held once a year on the ninth day of the ninth month in place selected. The name is Hoo-Hoo, not Hoo-Hoos. The singular is plural and the plural very singular.

A number of carefully groomed "black cats" came over from Buffalo and initiated the Ca-

MR. H. P. HUBBARD, TORONTO,
Hoo-Hoo Vice-Gerent for Eastern Canada.

nucks into the mysteries of the onion bed. The offices were filled as follows :—

Snark of the Universe - C. H. Stanton
Senior Hoo-Hoo - J. B. Wall
Junior Hoo-Hoo - - C. M. Treat
Bojum - - - Jno. Feist.
Scrivenoter - - - W. C. Laidlaw
Jabberwock - - Orson E. Yeager
Custocatian - - -Fred. J. Blümmenstein
Arcanoper - - William Hogg
Gurdon - - - - Jno. McLeod
Vice-gerent Snark Hubbard, assisting as required.

Precisely at nine minutes past nine a string of nine blind kittens were led, amidst much caterwauling, through the wonders of Hoo-Hoo land, after which the following supper was enjoyed :—

MENU.

Soup
China Chicken—Inserted Teeth

ous of attending should send their names to H. P. Hubbard, 30 Front St. E., Toronto, Ont. Dues are 99 cts. a year. Those who have but one Christian name will be given another. The order is limited to 9999 members and they are very close to that mark now.

J. R. H.

THE LUMBER DEMAND IN FRANCE.

In a report to the Dominion Government Mr. A. Poindron, Commissioner at Paris, France, states that a large development of the lumber and timber exports to France could be obtained if Canadian exporters were to appoint direct agents in France. In fact the most important of them are dealing with France through the firms in England that they have entrusted with their general agency for United Kingdom and the continent. In spite of the reason of which I am aware that Canadian exporters could state, in favour of their present organization as to exports of lumber and timber to Europe, I am afraid the Canadian export trade of lumber to continental Europe in general, and specially to France, will develop at a slow rate until they try direct connections with agents in continental European countries.

As regards France, the agents of Canadian exporters in the United Kingdom have to give to their own representatives in France a part of their commission, and they feel inclined to work preferentially the English market at full rates of commission.

On the other hand their representatives in France give also their preferences to business done at full rates of commission, and as they are generally entrusted with direct agencies of exporters from other foreign countries, like Baltic countries, United States and others, and as they are often born in such foreign countries, they carry the Canadian lumber import business in France with less care and energy than Canadian or French direct agents would do.

As to square timber, oak, birch, maple, elm, ash, are in very large demand in France. Oak planks and flooring, maple flooring, pine deals, staves and blocks could get a largely increased trade. As to spruce deals, in Paris, Rouen, Le Havre, Alger, Oran, Marseilles, the size 3-in. x 9-in. took the largest dem and, with an approximate proportion of 3-in. x 8-in. and 3-in. x 7-in specified by every order. Quality —1st, 2nd and 3rd Quebec—Average, 2nd Quebec. Average length 14 feet.

In Bordeaux and Nantes, the demand is chiefly for 3-in. x 7-in. and an approximate proportion specified by the orders of 3-in. x 9-in. and 3-in. x 8-in. Quality—1st, 2nd and 3rd Miramichi and Quebec—Average 2nd Miramichi and Quebec. Average length 14 feet to 15 feet. Important deal end orders 6 feet to 9 feet would be also available in all of the places referred to.

PRACTICAL SAW POINTERS.

An extreme amount of swaging increases the tensile strain upon the saw. The proper amount of swaging varies, according to the timber being sawed, hardwoods requiring the least set, and soft or fibrous woods requiring more. A clearance of 4 to 5 gauges is usually considered sufficient by most filers, and few make a greater distinction than 1 gauge of set as between hard or soft woods. It is a well-known fact that many run their saws without distinction upon all classes of stock that approach the saw, and there are mills that cut a dozen different kinds of woods almost daily with relatively equal success. The final fitting of circular saws differs greatly in different parts of the country, according to the timber being cut and the class of the logs. Seven-gauge circulars are most commonly used, running on from ¼-inch to 5-32 inch set. Some of the southern and Pacific coast mills run 5 or 6-gauge saws, and in the latter section run a set of from ⅜-inch to ½-inch. The saws in use for hardwoods vary from 8 to 11-gauge and are run variously on from 3-16 to ¼-inch set. Gang saws in common use vary from 11 to 16-gauge ; log band saws from 14 to 16-gauge ; rift gang saws from 15 to 18-gauge ; band resaws from 18 to 26-gauge.—Packages.

VIEWS AND INTERVIEWS

One who has thoroughly exploited the Newfoundland timber and been actively engaged in its manufacture is authority for the statement that the pine and spruce of that country is faulty and does not compare with the timber of Canada—claims to the contrary notwithstanding. His opinion would seem to be substantiated by the withdrawal from that field of a large Scotch firm which had invested heavily in limits and intended carrying on operations on an extensive scale. Had their short experience been of a satisfactory character, they would probably not have disposed of the property even if the turnover represented a profit, which is doubtful.

* * *

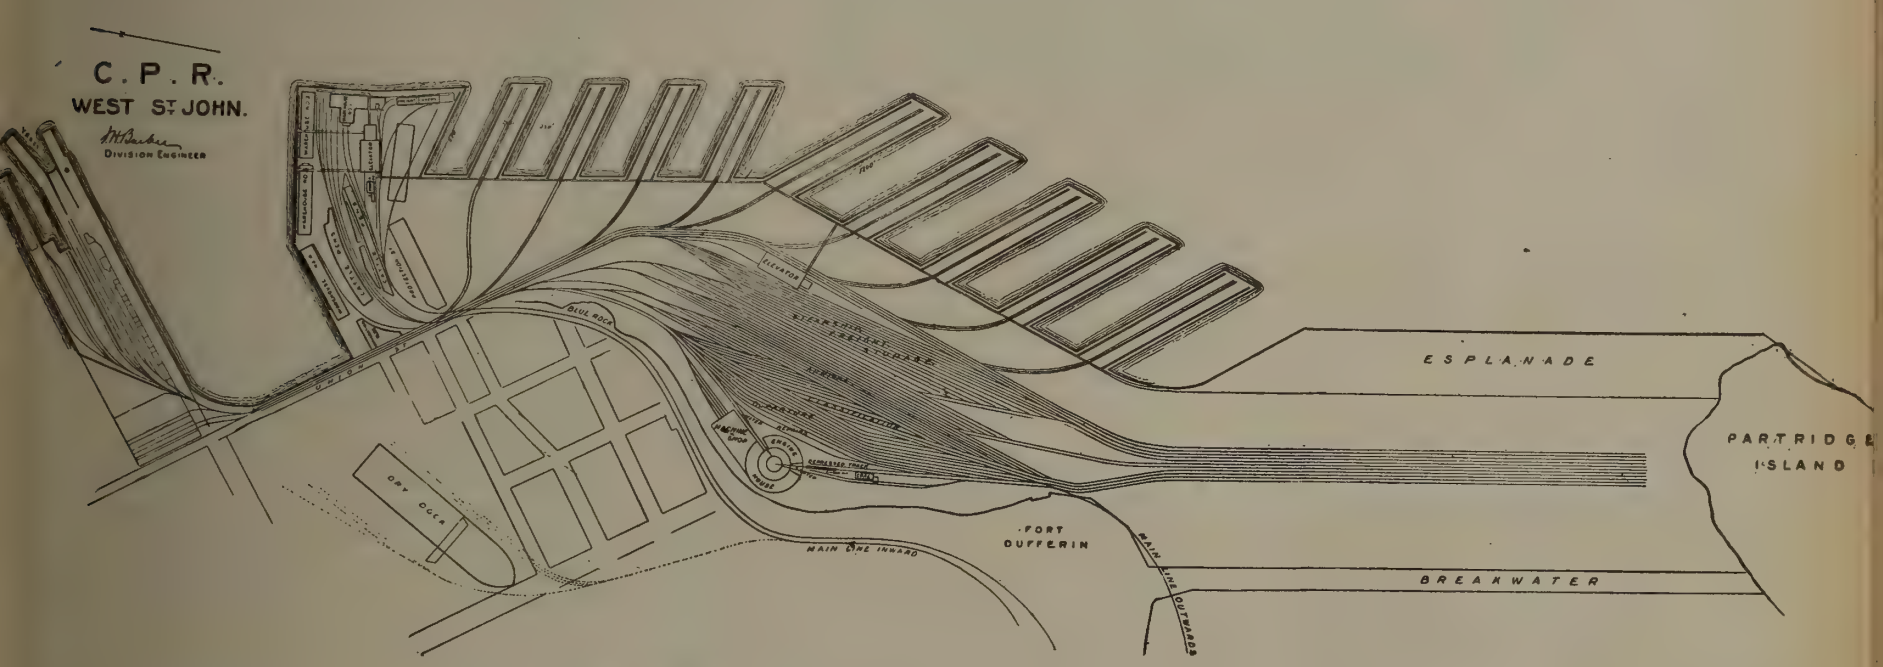
A gentleman well informed in Pacific Coast lumber matters was asked if he did not think much of the trouble with the shingle trade was due to the fact that the shingle weavers were employed by piece work rather than by the day, and replied: "The question you ask regarding the method of paying for manufacturing and packing shingles is a question which has come up many times in association meetings on the coast. That cannot be responsible for all the trouble. Many of the mills now pay all their shingle weavers by the day, but there seems to be something so contrary in the nature of this class of help that they will do a lot of mean, aggravating things which are of no benefit to themselves but a source of much loss and annoyance to their employers." Continuing, he said: "By the way, did you ever hear how these shingle sawyers, particularly the packers, came to be called weavers? In placing the shingles in the racks a good many of them get into the habit of swinging their bodies back and forth as they work. In fact it resembles nothing so much as working at a weaving machine."

* * *

Some information concerning lumber matters in West Australia was imparted by Mr. J. C. Port, a leading lumberman of Perth, the capital of that colony, who paid a visit to Toronto last month. Mr. Port was on pleasure bent, although aiming at the same time to pick up some ideas regarding saw-milling in Canada. The population of the Australian Commonwealth is about 4,000,000, that of West Australia being 240,000. Within twelve years the population of West Australia has increased 200,000. Mr. Port has for some years operated a large saw-mill in the vicinity of Perth. The timber of West Australia consists largely of Jarrah and Karri, both hardwoods of a very tough nature. The area of Jarrah timber in West Australia is about 8,000,000 acres, and that of Karri 1,200,000 acres. The method of logging differs from that of Canada, in so far that there are no streams by which to float the timber to the mills. Horses and railways furnish the means of transport. The wagon used for hauling is a two-wheeled "whim", the wheels being 9 feet in diameter. It is not considered profitable to haul the logs by means of horses for a distance of more than one mile. Beyond that distance railways are constructed into the limits. Operations are conducted the year round, there being no snow, but in the winter time the ground becomes boggy and hauling is more expensive than in the summer. The Karri tree grows to an average diameter of about 6 feet and the Jarrah to 4 feet. The writer was shown a picture of a Karri tree 245 feet high and 40 feet in circumference. The waste of timber is much greater than in this country, owing to the fact that the heart of the tree is defective and useless. Lumbermen figure that only 50 per cent. of the timber is merchantable. Notwithstanding this loss, the production per acre must be very large, as Mr. Port operated a large mill for five years without building a railway into the timber. The haul, however, was much longer than the average and towards the last became very expensive. West Australia is now exporting large quantities of railway sleepers and bridge and jetty timber to South Africa, the trade with that country having greatly increased since the war. Paving wood is exported to England. The Jarrah timber is very durable. It has been known to last for forty years in wharf piling. One of the last orders executed by Mr. Port before leaving on his tour was some 6,000 loads of sleepers for the Ceylon Government. Three steamers carried the timber, the freight rate being 30 shillings a load of 50 cubic feet. Mr. Port considers that Canada could do a large trade with Australia in doors, sashes and like goods, as there is no timber there which answers the purpose of our pine and spruce. The Oregon pine is well spoken of and can be laid down there at a lower cost than the native timber. It is used in buildings for joists, etc.

HARBOR IMPROVEMENTS AT ST. JOHN, N.B.

The city of St. John, N. B., has expended over three-quarters of a million dollars on improvements to its harbor, and is about to undertake improvements of a still more extensive character. The proposed plan, shown by the accompanying illustration, was first conceived by Superintendent James Osborne, of the Canadian Pacific Railway, and submitted by him to the Board of Trade and City Council. It provides berths for thirty additional steamers. The new work will start at the present C.P.R. wharf on the harbor front, Sand Point, and



Plan Showing Proposed Harbor Improvements at St. John, N. B.

run down the harbor to the Beacon Light, giving the first five slips shown eleven additional steamer berths. These slips would be 670 feet long by 250 feet wide.

Then from the Beacon towards Fort Dufferin would be a line of five double piers, giving accommodation for 18 or 20 more steamers. These slips would be 1200 feet long by 300 feet wide. The curved lines represent railway tracks which would serve each berth, and in the immense yard which they would traverse there would be room for more than 50 miles of tracks.

Extending from Fort Dufferin to Partridge Island along the line of the present breakwater, would be an esplanade, perhaps 1,000 feet wide, with roadway and street car lines. The lines marked "proposed boulevard" and "breakwater" show only the beginning of the proposed esplanade; it would extend to the island, act as a breakwater, and also, on the shore side, give room for more steamer berths.

It is expected that the Dominion Government will be induced to grant financial assistance towards the contemplated improvements.

For the accompanying cut we are indebted to Hardware and Metal.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES :
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION :

One Copy, Weekly and Monthly, One Year, in advance.. $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., are CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which the inserted in a conspicuous position on front page of the Weekly Edition.

VALUE OF HARDWOOD TIMBER.

While coniferous woods comprise the bulk of the forest wealth of Canada, there is a large quantity of hardwood timber which represents an asset of no small value. The tendency in the past has been to overlook the importance of the hardwoods, but the time has come when the question of preserving this class of forest must receive attention.

Notwithstanding that iron and steel have replaced wood in the construction of buildings and for many other purposes, the demand for hardwood lumber is gradually increasing, and to-day the factories using such as their raw material are finding difficulty in obtaining an adequate supply. The furniture factories are now in the happy position of being compelled to take their travelling salesmen off the road on account of having more orders than can be filled. The consumption of hardwood lumber by this industry alone is very heavy. With the consequent increased price of lumber has come an appreciation in the value of stumpage.

The action of certain railroads in the Northern States may have an important bearing upon the hardwood demand. It appears that many of these roads have experienced great difficulty in obtaining longleaf pine ties from the Southern States and have appealed to the Bureau of Forestry for assistance. The Director of the Bureau has suggested the use of beech, maple and birch instead of pine, these to be seasoned and preserved just as beech is seasoned in France. The Great Eastern Railroad of France is said to have succeeded in preserving beech ties for 35 years by impregnating them with tar oils. Should it be found practical to preserve harwood timber in this manner even for a shorter period than is done in France, the railroads have expressed their intention of acquiring large areas of timber lands on which they will grow their own trees, cut their own ties, and thus be assured of a steady supply.

Other new uses for hardwood timber will doubtless be discovered as time goes by, and our advice to owners o f hardwood stumpage is to preserve it, and before many years it is likely to be much more valuable than it is to-day.

WARNING TO CANADIAN EXPORTERS.

In view of the recent gratifying increase in Canadian exports, some suggestions may be offered to shippers which, if adhered to, may tend to further swell the volume of our foreign trade. The exporter should become thoroughly acquainted with the conditions of the country and know exactly the class of goods required. With this information, he should aim to ship goods which will be considered satisfactory in character and in conformity with the specifications. Substitution of other goods for those ordered should not be permitted. It is a great mistake to jeopardize future prospects of trade by making a wrong beginning. The shipper who sends forward inferior goods is not only likely to suffer a loss himself but gives a black eye to Canadian exports in general, for until the trade shall become thoroughly established the class of shipments received will be to a large extent the determining factor in placing further orders.

Promptness in making shipments is also very necessary. If goods are not shipped within a reasonable time after the order is received, the conditions in the country for which they are destined may have undergone changes and prices have weakened accordingly, thus rendering the importer liable to sustain a loss.

The Canadian consuls frequently call attention to the mistakes of shippers. In his last report to the Department of Trade and Commerce, Mr. Jardine, Commissioner at Cape Town, South Africa, gives one instance of several he has met with. A Canadian firm of commission merchants in Johannesburg ordered a large quantity of building material for the government railway. After some months about $15,000 worth arrived, and on examination the government refused to take the timber on the ground of its not being first quality as ordered, and accordingly cancelled the balance of the order. The commission firm, however, had already accepted sight draft and paid the price for first quality timber. Mr. Jardine confirms the government official's opinion that the timber was of inferior quality. A buyer for it had not yet been found at time of his last report, notwithstanding that timber of all kinds is in great demand at Johannesburg. This transaction became common knowledge, greatly to the detriment of the Canadian export trade.

Mr. Larke, Commissioner in Australia, calls attention to delayed shipments, careless packing, and substitution, as being great barriers to trade, also that frequent differences arise in respect to accounts. Where goods are sold c. i. f. (cost, insurance and freight), shippers usually make no allowance for exchange where payment is arranged for in Canada. The full price is collected and the buyer finds the exchange charged up against him at his bank. As this amounts to 2½ per cent., it is a considerable item. Again, where credit is given for freight to be collected at port of destination, the credit commonly is at the rate of a pound sterling for $4.86, whereas the shipping companies collect at the rate of $4.80 to the pound, a loss to the buyer of three pence in the pound.

The Canadian government officials appear to be working energetically to increase the export trade of Canada. They have adopted the policy of giving specific information of market requirements and of enlightening shippers in respect to methods of manufacture as far as it is possible to do so. With a continuation of this work and the co-operation of manufacturers and shippers, the exports of this country should continue to grow.

IMVESTMENT IN CANADIAN TIMBER LIMITS.

Many millions of dollars of United States capital have been invested in Canadian timber limits. The depletion of the white pine in Michigan formed the first pretext for such investment, which was confined largely to the Georgian Bay district of Ontario. The embargo on the export of saw logs from the province, passed about four years ago, was the means of turning the attention of prospective buyers to the other provinces of the Dominion. The International Paper Company have steadily added to their holdings of Quebec limits, and are to-day in possession of vast areas. The wave of buying sentiment extended to the east, and during the last two years capitalists from across the border have become owners of large timber lands in Nova Scotia and Cape Breton. The properties in the east have, with few exceptions, been purchased with a view to the utilization of the spruce timber for pulp, although several saw mills are also projected.

Perhaps the area ot timber lands in New Brunswick held by United States parties is less than in any other province of the Dominion, for recently there have been heavy investments in British Columbia timber. Notwithstanding the claim that much of the timber is difficult to log, that province seems to offer a very promising field for future lumbering operations.

An indication of the trend of the times is furnished by the purchase of Canadian limits by concerns in the Eastern States who have heretofore conducted a wholesale business exclusively—Messrs. Easton & Company, of Albany, for example. Owing to the increasing difficulty of obtaining a lumber supply, due partly to the decadence of the white pine, and fearing a loss of trade thereby, such firms are taking the precaution of buying standing timber, thus rendering a supply of lumber absolutely certain.

The timber industry of this country, it will be seen, is being developed upon natural and very satisfactory lines. Too much timber is still being exported in its raw state, but this will eventually be remedied, and to those of our neighbors who are disposed to invest their

money and establish mills on this side on an equal footing with Canadians, we extend a hearty welcome. There is a vast amount of timber yet in Canada, which, if properly conserved, should meet the requirements of generations to come.

EDITORIAL NOTES.

The formation in Toronto of a branch of the Hoo-Hoo Order has the proper ring about it. Mysterious as it is, it will doubtless tend to bring the members of the lumber trade into closer touch with each other. Before the coveted nine thousand nine hundred and ninety-nine is reached, as many Canadian lumbermen as possible should seek admission within the fold.

Those who six months ago boldly predicted a break in lumber values before midsummer of this year must feel like taking to the woods. Prices have been universally steady, even in the face of labor troubles and other unfavorable conditions. Manufacturers of lumber are in a strong position financially as a result of the prosperity of the past few years and are not disposed to sacrifice stock whenever there may be a temporary check in the consumption. This will no doubt be a telling factor for some time to come.

The policy of the new British Columbia Government in relation to the timber industry is still in doubt. It is know that the present Premier is bold in his methods and fearless of consequences, and by some it is predicted that a complete change of the timber laws will be made. In our opinion this is improbable. Doubtless the existing laws can be improved in many ways, but the policy of prohibiting the export of timber and of encouraging home manufacture should be continued. The plea of the logger to be allowed to export timber is not in the interests of the country. The regulations should also aim to preserve the timber supply without in any way crippling the lumber indusry.

Righteous indignation seems to have been engendered by the action of the United States Interior Department in respect to the cutting of timber on the Chippewa Reservation in Minnesota. An act of Congress approved June 27, 1902, provided for the sale of certain lands belonging to the Chippewa, Mississippa, and Winnebigoshish Indian Reservations. The Secretary of the Interior was instructed to get estimates of the amount of standing pine and to offer it for sale under such rules and regulations as he deemed advisiable. In accordance with this provision a tract of 110,000 acres of pine lands, on which there is standing 235,000,000 feet of pine timber, is to be offered for sale on December 5th next, to be followed a few weeks later by 200,000 acres on which competent lumbermen figure there is a billion feet of timber. The regulations provide that parties whose bids are accepted shall be required to move the timber before July 1, 1905. This practically leaves but one logging season, that of 1904-5. The placing of so much timber on the market in a single year will, it is feared, somewhat demoralize the lumber industry and at the same time reduce the price of stumpage. The wisdom of the Government's action is questioned, and very rightly so. It seems to be directly opposed to the policy of economical cutting of timber and to the objects of the friends of forestry.

STEAM LOGGING OUTFIT.

The accompanying illustration represents a type of steam log hauler which has been used with some success in the spruce forests of the Eastern States. It is mounted on wheels in the summer and a sled in the winter. An endless lag bed makes the rear runner carry practically the whole weight of the machine of 15 tons with the exception of about one ton that bears on the forward sled. The runner is driven by a pair of engines and takes its steam at five-eighths stroke, so it can never get on dead centre.

Steam Logging Outfit.

The runner, or endless lag bed, is made of steel castings jointed together in such a way as to run over the sprocket wheels with toe cocks cast on them, the same as on a horse, so when they come in contact with the snow or ground there can be no slipping, even if it strikes the glare ice. This runner is driven through its rear sprocket wheel, which is constructed in such a way that the runner can tilt at any position that the road may require. The entire weight of the machine sets on a 5-inch axle running through the runuer and hung loose at the ends so that the runner always tilts easily over rough going, rocks or anything that it may come in contact with, with a remarkable easy and quiet motion, which it is impossible to get from a round wheel.

The machine is the invention of O. A. Lombard. It is driven by a 100 horse power equipment. The boiler is a regular locomotive boiler fitted with the necessary injectors, water tank and suction hose for taking water from springs or streams along the road. Wood is used for fuel. The machine is reversible, the same as a locomotive, and will run one way as well as the other. It has a force draught, caused by the exhaust, the same as a locomotive ; it also has a governor on the steam pipe just before it branches to each engine, which governor controls the speed of the machine and is belted to the main shaft. This governor is set to give the machine a speed of 5 miles per hour, and presents the advantage that the engineer may pull the throttle wide open and the machine will take care of its own speed in plunging in and out of sharp pitches and cradle knolls, and gets the necessary steam for up hills.

The reason for using two sets of double engines, making four cylinders in all, is to get rid of the compensating gear. Tests that have been made show the logger capable of carrying 20,000 feet of spruce logs per load over a logging road of seven miles and making two trips per day. It is claimed that there is a vast saving in expense as compared with horses.

ARRANGEMENT OF A FILING ROOM.

The drawings herewith are intended to give an idea of the arrangement of a filing room in which it is designed to care for band saw blades. Figure 2 is a ground plan of such a room, in which A represents the hammering bench ; B, the brazing table ; C, the automatic sharpener, with wheels f and f' and stands and straining device g. In connection with it is also shown the saw vise, d.

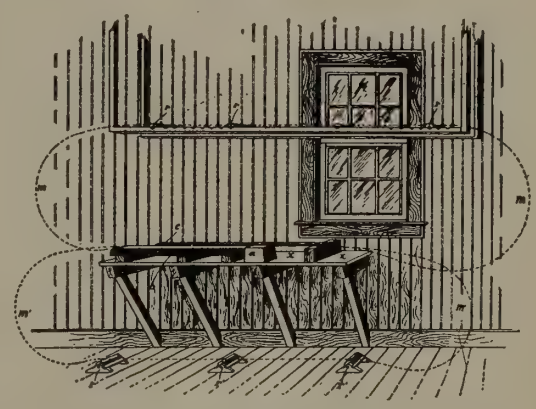


Figure 1.

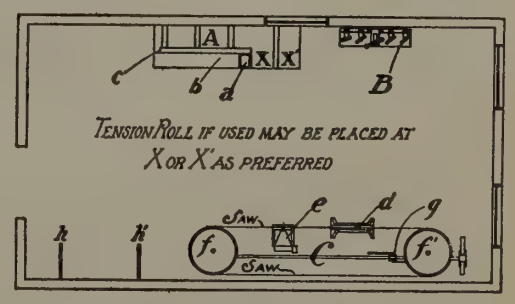

Figure 2.

The hammering bench is also shown in perspective in Figure 1. The location of the bench and tools with reference to the window and to each other is clearly shown : a represents the anvil, b the leveling block, c the long straightedge, and x and x' the positions for tension roller, if one be used. The dotted line m m shows the saw in position to hammer the inside of the plate, and the line m' m' the outside thereof.—From W. B. Mershon & Company's 1903 Catalogue.

BETTER SYSTEM NEEDED IN MANUFACTURING.

Good machinery is not more essential to the success of a manufacturing enterprise than is a thoroughly modern office and factory system. Every machine in your plant may be of the latest and most expensive model, but if the system upon which your business is conducted is antiquated and inefficient you will be behind the race and will probably meet with disaster.

Scarcely too much emphasis can be put on this point. Repeatedly I have been impressed with the extent to which the manufacturer is inclined to depend upon progress in machinery and to neglect progress in office and factory methods. If his machinery is in any way yeilding unsatisfactory results, the first thing the manufacturer seems to think of is "Get a new machine or hire a new man." This is the common panacea, and hundreds of manufacturing enterprises have failed simply because improved machinery was expected to accomplish what could only be done by means of good sound business system—that established routine of order acting along the lines of common sense and sound principles.

Perhaps it would be easier for the manufacturer to see the situation in its true perspective if, for the moment, he would look at the business organization of his house as a machine, to be improved and brought up to a higher degree of efficiency through his intelligent effort along the line of progress. Certainly, the moment he began to view his house as a machine—and the most important one in his plant, too—he could no longer remain indifferent to this phase of his business.

A cardinal weakness in most factory systems is a failure to get at the cost of production with sufficient accuracy. Every article, book or document that will in any manner throw light upon this difficult problem should be eagerly sought by the progressive manufacturer. He can afford to neglect nothing which will aid in the accuracy and ease with which his cost of production is to be determined. Here is a matter in which guesswork will not do, and where a fraction of a cent, in the ultimate findings, is of serious moment.

Considering the importance of figuring the cost of production to the finest fraction, the laxity of the ordinary methods of computation is surprising. When it is remembered that the price he is to receive for his product, and consequently the extent of his profit, depends upon the exactness with which he is able to arrive at the cost of production, no argument will be needed to make plain to the uninitiated the importance of this factor in the manufacturer's office system. However, I cannot refrain from repeating that here is the common stumbling block, so far as the accounting methods of the manufacturer are concerned.

If a man knows what every article he manufactures costs him to produce, and is absolutely certain that not the most insignificant element of that cost has by any chance been omitted, he is in a position to meet competition and to meet it closely. And unless he has a cost system that demonstrates this result to a certainty, his profits will, on those cases of "close figures," mysteriously change into losses.

Let me illustrate this phase of the matter by the supposition that the buyer for a big department store comes to me and asks for figures on a certain large number of tables. When I give him my price he replies: "You are just $1,000 too high on the lot. I can get it from the other factory at $1,000 under your price. As a matter of fact, I would rather get the goods from you, and if you'll meet the other factory's price you may have the order."

Right there is where the test comes upon the cost system of the house. We will say that I could meet the figures of my competitor and still have $500 profit, provided every possible element of cost has been included in the estimate. But if there has been a single omission of any consideration whatever, I will lose by taking the job.

It is human nature to make close prices and meet competition, but I believe that in most instances where this is done the small margin of profit counted upon resolves into a small margin of actual loss through the failure of the original figures to include every element of direct and indirect cost. It is a remarkable cost system which is so perfectly constructed that nothing can be left out. But it is possible to have a system so carefully devised that 99 per cent. of cost possibilities are provided for.

Another important result achieved by a thorough system in a manufacturing business is to save waste of time on the part of expensive heads of departments, thus allowing them to give their whole effort and attention to executive matters of genuine importance. In other words, the complete situation in every department should be presented by regular routine.—Alexander H. Revell, in System.

WASTEFUL AND UNNECESSARY.

A correspondent of the Indianapolis Woodworker says: "To get out rough heading 1½ to 2 inches longer than the diameter of the finished head is wasteful and unnecessary, and many managers will not tolerate it. I have turned thousands of sets of flour-barrel heading 17⅛ inches diameter from rough stock 18 inches long. I think that to allow a very large margin like that causes men to do their work in a slipshod, inaccurate manner. It leads them to consider a great diversity of lengths as good enough and later to conclude that any old thing is good enough for anything all the way through their duties. Aside from all that, a diversity of length always gives trouble at the heading saw. The adjustment of the dogs to catch different lengths of blocks, every few blocks, will make cuss words come to the surface if they are anywhere in the vicinity. Again, the sawyer is apt to try to saw blocks that are too short for the dog adjustment and let the block get away from him—then what?"

N. Thompson, of Thompson & Campany, Vancouver, B. C., recently made a business trip through the Arrow Lake and Lardeau country. He secured several orders for machinery, including one for eight engines and boilers for a steamer for the Yale-Columbia Lumber Company.

WEEKLY EDITION

The Lumberman Monthly Edition, 32 pages} $1.00 PER YEAR {The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

Vol. IX. TORONTO, CANADA, AUGUST 5, 1903 No. 27

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

FOR SALE. TWO CARS 1" IN. DRY OAK, 1st, 2nd and 3rd. CHAS. ASLEY, P. O. Box 43, Foxboro, Ont.

WANTED—BASSWOOD AND HARDWOOD barrel heading, 5/4 and 8/4 beech, 2" and thicker soft maple and wormy chestnut. R. E. KINSMAN, Hamilton.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

HARDWOOD LUMBER WANTED

3-inch Common and Better Soft Elm.
2-inch 1's and 2's Soft Elm.
Also all grades Ash, Basswood, Birch and Elm. Send us list of any hardwood lumber you have for sale.

BRIGGS & COOPER CO., LIMITED,
Saginaw, Mich.

FOR SALE.

One 20" x 24" Waterous engine, 8 ft. driving wheel, 26" face. 11 ft. x 4 ft. Stillwell & Bierce Heater, feed pipe and connections to heater complete.
One 10" x 18" Engine.
One 3-k.w. 2,500 Standard Dynamo and Voltmeter, wiring and 50 lamps (complete.)
One pair twin engines, 10x16.
One No.2 Carriage and Saw Frame, 78 ft. track, and two 60" Saws.
One set Trimmers, to trim 6 to 24 ft., chains, mandrils and saws.
Also a quantity of Shafting, 2" to 4" pulley, and steam and water pipe.
One 14' x 60" Boiler; one top saw slash table.
About one mile of telephone wire, and two 'phones. For particulars, apply to BOOTH & GORDON, Azilda, Ont.

WANTED — 800 CEDAR POSTS — EIGHT feet long, nine inches or more diameter; must be straight; quote price f. o. b. Apply H. WINNETT, the Queen's Hotel, Toronto.

Oak For Sale

FIVE CAR LOADS OF CHOICE LOG RUN Red Oak, one and two inch. Apply to MAITLAND, RIXON & Co., Owen Sound, Ont.

Logs For Sale

5,000 GOOD LOGS, MOSTLY WHITE PINE 16 feet long, now running into the mouth of Spanish River at Georgian Bay. Also Limit for sale with or without saw mill. Limit and saw mill located on C. P. R. main line. PINE LUMBER COMPANY, Cartier, Ont.

PINE LIMIT FOR SALE

13½ MILES ON PIGEON RIVER, THUNDER Bay. Limit lies on river bank 50 miles from Fort William. A splendid location for good saw mill. Dray haul will water bulk of timber. Owner quitting lumber business. Limit will be sold at a bargain. Box 790 CANADA LUMBERMAN, Toronto.

TIMBER BERTH FOR SALE

Area about 10 square miles, on Georgian Bay, between the mouths of the Muskoka River and Go Home River. The Berth is easy of access from Midland and Penetanguishene and particularly well situated for logging. Full particulars on application to

THE MUSKOKA MILL AND LUMBER COMPANY, Limited, Toronto.

Tenders Wanted

for next winter's cut of one or two million feet of Hardwood sawed to order. Birch, Maple, Oak, Beech and Basswood, Balm Ash, and Soft Elm; also two million feet of Hemlock in logs, and one million Pine, White and Norway, Piling Poles and Posts, Shingle Blocks and Lath Timber; 100,000 R. R. Ties, and 5,000 cords Pulpwood on Georgian Bay, f. o. b. or over rail. Box 13, CANADA LUMBERMAN.

Patent For Sale.

BAND SAW CLAPBOARD MACHINE, THE only one in the world. Carriage has automatic setting device, only 8" stroke, with turn table. Block stands vertical and cuts all clapboards radially. Will take blocks any diameter 14" to 32 x 48" long. All clapboards cut desired thickness regardless diameter block. Will cut five times faster then any circular machine. 25 per cent. saved in saw kerf. A sound block 48" long x 32" diameter will cut out $10 worth of clapboards. Large demand in New England States. Prices $45 per M pieces. Will sell entire right for Dominion. Drawings and specifications on application. A. J. BURTON, Parry Sound, Ont.

PACIFIC COAST LUMBER MANUFACTURING OPPORTUNITY

WE WANT A FIRST-CLASS PRACTICAL mill man with $50,000 to $100,000 cash to take an active interest and management of one of the largest and best mills on Pacific Coast near Vancouver, B. C. Mill ready to put in commission with a small expenditure. Entire output of mill (both rail and foreign) practically contracted at best market prices. A splendid opportunity to make big money. A connection with most reliable parties, who can finance the proposition fully to make it one of the best paying mills on the Coast. An exceptionally fine opportunity for the right man, who must be thoroughly competent to handle a mill with a capacity of 250,000 to 300,000 ft. in a ten hour cut. The best of references requested and will be given. If you mean business and have the cash, or can get it, answer this at once and full particulars will be furnished. Address "BRITISH COLUMBIA," care CANADA LUMBERMAN.

LATH FOR SALE, ABOUT 150 M. KNIGHT Bros. Company, Burks Falls, Ont.

WANTED—TO RENT A PORTABLE SAW Mill; state charges per thousand feet. Apply Drawer 12, Hamilton.

FOR SALE—80 CORDS OF GREEN HEMlock bark. Intending purchaser will state highest cash price, measured f.o.b. cars, Wiarton, Ont A. P. EBERT, Wiarton.

FOR SALE

FACTORY FLOORING

KILN DRIED BIRCH, ABOUT 60 M. Box 442 CANADA LUMBERMAN.

WANTED—WHITE PINE

MILL CULLS AND BETTER, ALSO HEMlock and Basswood. We handle entire cuts. HURDMAN & ELMITT, Ottawa.

WANTED

GOOD CEDAR LUMBER FOR BOAT BUILDing, one inch thick or over, as we can use any thickness and also use all other kinds of lumber; would buy mixed cars. PETERBOROUGH CANOE COMPANY, Peterborough.

WHITE OAK PILES FOR SALE

ABOUT 700 WHITE OAK PILES FROM 20 to 60 feet long; good desirable piles. Also some large oak logs; can deliver on rail in August and September. Address Box 78, Dresden, Ont.

FOR SALE

400 CEDAR TELEPHONE POLES, 25 FEET long, 5 inch top. Also 800 Cedar Telephone Poles in lengths from 25 to 50 feet, and a quantity of 10 x 10 and 12 x 12 Hemlock, 12 to 16 feet long. JOHN D. MCRAE, Eganville, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

The first days of August have witnessed no material change in the lumber market. The buying has been confined chiefly to small lots for sorting up purposes. The tone of the market, however, is steady, with indications of a satisfactory trade during the fall months. The scarcity of cars has rendered it impossible to keep shipments up to orders. It is feared that the car shortage this fall may again seriously interfere with business, as it has developed earlier than usual this season.

In pine the most urgent call is for box and mill culls, the supply of which has been greatly reduced by the heavy buying which has been in evidence for some time past. Prices of these grades, as might be expected, are exceptionally firm. Dressing is also in good demand. The consumption of hemlock lumber continues to be heavy, and higher prices are predicted by some manufacturers. Basswood, elm and maple sell more readily than the other hardwoods, although the general hardwood situation is one of considerable strength. Buyers willingly meet the prices asked by manufacturers. This is probably due to the fact that the latter have pursued a conservative policy and have not advanced prices to an unreasonable basis.

There has been no improvement in the shingle situation, and until the supply of red cedars held by Ontario dealers shall become reduced conditions promise to be unsettled. For pine shingles the mills are asking $2.70 for XXX, $1.90 for XX, and 65 cents for X.

QUEBEC AND NEW BRUNSWICK.

Prices for spruce lumber are being maintained, by necessity if not by demand. The feeling among manufacturers is that a material decline in prices is out of the question on account of the increased cost of stumpage and labor. At the present time very few sales of British deals are taking place, for the reason that the British market has responded slowly to the high prices ruling on this side. There is a disposition to restrict the production of lumber intended for that market and to give more attention to shipments to the West Indies, France, Australia and the United States. Should there be a general falling off in the lumber demand, the manufacturers claim that they are in a position to restrict the log production during the coming winter. There are about 30,000,000 feet of logs hung up on the St. John River in New Brunswick, the greater part of which will not come out this year. Smaller quantities of logs are hung up on the streams in Nova Scotia.

The shingle demand is not altogether satisfactory, although there is an undercurrent of strength, due to the attitude assumed by the large manufacturers, who refuse to accept offers lower than $3.40 for extras on Boston rate of freight. It is believed that shingles will strengthen later in the season, but at the moment the demand is scarcely equal to the offerings.

MANITOBA AND BRITISH COLUMBIA.

The country demand for lumber throughout Manitoba and the Territories has slackened, as the farmers are devoting their time to preparations for harvesting of the crops. The total yield of wheat by the Canadian North-West is estimated at 60,000,000 bushels, a slight decrease from that of last year, but still a bountiful crop. When the harvest is gathered an increased demand for lumber will doubtless arise. In Winnipeg the chief call is for finishing material, many of the buildings commenced early in the year being well on towards completion.

The settlement of the labor troubles in Vancouver was followed by a quick re-

vival in building operations. Confidence has been restored and money is easier. The mills have many orders for lumber on their books. The logging industry, however, continues in an unsatisfactory condition, chiefly on account of the depression in the shingle trade. Many of the logging camps are closed down. It is understood that the Provincial Government have notified the Loggers' Association that the law prohibiting the exportation of logs to the United States must stand. There continues to be a good demand for limits. During the month of June 155 licenses to cut timber on Government lands were issued. Of these 99 were licenses to cut on Government lands in the Big Bend and Duncan River district, Kootenay.

UNITED STATES.

The lumber demand throughout the United States is irregular; some districts report an increase in the volume of trade, others a falling off. At Duluth and Philadelphia prices of white pine are said to be slightly easier. There has been no general weakness, however, and business is about as good as could be expected at this season of the year. Farmers are engaged in harvesting the crop and will not be in the market for lumber until the early fall. The wheat harvested shows a good yield and the promise is for an average crop. The yield of corn will perhaps be slightly less than last year.

Stocks of lumber are accumulating to some extent. This is not regarded in an unfavorable light, as in the past many of the mills have been handicapped in making shipments on account of scarcity of certain grades. Chicago dealers report a better trade and less pressure to sell. Norway pine is in light supply and strong. There still prevails a disposition to advance the price of demension. It is claimed that not more than half of the regular supply of demension is being turned out by the mills, nearly everybody cutting inch lumber almost exclusively. Thus the shortage of dimension promises to be further increased. Spruce lumber sells readily. Throughout the Eastern States clapboards are worth $45, $43 and $40. The list for car frames from the mills is unchanged at $19 for ordinary and $21 for 12-inch.

A very satisfactory movement of hardwood lumber is reported. Stocks in many varieties are still scarce. In quartered white oak it is said that the greatly increased amount of dry stock available has not been sufficient to satisfy the demand in the slightest. Soft elm and birch are selling very freely. The supply of basswood has increased, although it is still below normal. Maple is slightly lower, but the demand is keeping up well. Manufacturers of maple flooring have shaded prices, resulting in an increased volume of orders. Laths are slightly weaker. In Chicago No. 1 white pine are quoted at $3.35, No. 1 Norway and No. 1 hemlock at $3, No. 2 white pine at $2.75, and No. 2 mixed at $2.50.

GREAT BRITAIN.

The reports of the British lumber market this week are not of an entirely satisfactory character. The consumption does not show the improvement which had been hoped for, and sellers have found it difficult to place large blocks of stock, the tendency being to purchase for immediate requirements only. There is a desire to buy cheaper kinds of lumber instead of pine deals whenever it is at all possible to do so. At the last public sale in London prices ruled steady, 3 x 9 spruce bringing £10 10s per standard. A favorable feature is the fact that importers are beginning to recognize that there will be no fall in the price of Canadian lumber this year. A writer in the Timber News expresses a favorable view of spruce in the following words: "Spruce values are steadily improving, and although the number of regular buyers at the auction sales is not great, the competition among them is exceedingly keen. Many buyers who have been waiting for a fall are very sorry they did not accept the advice offered in these columns some months ago, when we urged spruce consumers to stock up." The same writer, after referring to the shortage in the log supply in Maine and New Brunswick, says: "This extra demand from the United States spells higher prices all round, and coming on top of the existing Canadian shortage gives both manufacturers and shippers much the best of the strong position. In view of these circumstances, all tending in the direction of reduced supplies abroad and higher quotations here, would it not be greater wisdom for British consumers to promptly cover their reasonable wants for the present year?"

STOCKS AND PRICES.

The tug Harrison is bringing a raft of logs from Byng Inlet to Owen Sound, for the John Harrison & Sons Company.

The Saginaw Lumber & Salt Company, Sandwich, Ont., have just received a large raft of logs from the Georgian Bay.

The J. D. Shier Lumber Company, of Bracebridge, Ont., have sold their good sidings, strips and shorts to the McArthur Export Company.

J. J. Wheelock & Son, Connors, N. B., report the following prices at the mill for 16 inch cedar shingles: Extras, $2.75; clears, $2.40; second clears, $1.75.

The steamer Crown of Navarre is loading deals and timber at Miramichi, N. B., for the United Kingdom. The steamer Brantingham is loading a cargo of deals at Quebec for the U. K. The steamers Persian and Ramon de Larrinaga are about to load at St. John, N. B.

During the first six months of this year British Columbia mills shipped by cargo 31,223,534 feet of lumber and 521,820 shingles.

The market price for No. 1 short hemlock piece stuff in carloads delivered in Chicago is $3.50. Water shippers are finding the cargo trade rather weak, sales for the present time being placed at $10.50 to $11.00 at the mill, as against $11.00 to $11.50 during the spring. There is a good demand, however, at the lower quotations.

Following is a comparative statement of timber, etc., measured and culled at Quebec up to July 28th as furnished by the Supervisor of Cullers:—

	1901	1902	1903
Waney White Pine .	850,753	1,519,699	1,084,440
White Pine	337,500	297,570	188,920
Red Pine	45,961	59 947	34,000
Oak	247,737	505,742	364,080
Elm	656,342	527,884	216,000
Ash	98,621	68,438	50,760
Basswood	332	.....	.....
Butternut	740	.....	.....
Tamarac	22	.....	.....
Birch and Maple	296,412	90,410	189,760

At a meeting of the directors of the Vermillion River Boom Company, held in Toronto on July 27th, it was reported that the upper river drive will be down to the mouth of the stream a month earlier than it was last season, when each owner drove his own logs. The company will handle more logs this season than in any previous year.

The Edward Hines Lumber Company, of Chicago, have taken a contract from the Barnett & Record Company for 8,000 40-foot piles for the Canadian Northern Railroad, to be delivered at Port Arthur, Ont., within thirty days. The piles are to be used for the foundations of elevators. The piling is about the only wood used in the work and the contract is one of the largest undertaken this year.

Cooperage supplies are scarce. Second-class elm staves are lowest in stock and with a good apple crop in sight, prices promise to advance. There is a slight advance in staves and heading, first-class elm flour and apple barrel staves selling in Buffalo at $9.50 to $9.75; mill run elm, $7.25 to $7.50; second-class, $5.50 to $5.75; basswood heading, 6¾ to 7 cents for first-class, 4½ to 4¾ cents for second-class; coiled hoops, $9.50 to $10 for 5½ foot and $10 to $10.50 for 6-foot; hickory, $6 to $6.75.

Under date of July 18th Messrs. S. P. Musson, Son & Company say of the Barbados lumber demand: "The only arrivals to note are a small lot by the schooner "Talmouth", not yet on offer, and the schooner "Rhoda", from Liverpool, N.S., with 212,000 feet, which was contracted for some time ago. The stock is moderate and fair prices should be maintained for both shipping and second quality pine. The demand for spruce is over. The "Talmouth" brought 442,000 Cedar Laying shingles, which we sold at $3.20 for clears, $2.85 for second clears, $2.36 for extra No. 1 and $2.24 for ordinary. We also learn that two cargoes of Long Laying are on the way from Gaspe, Que."

LARGE CAR LOAD OF SHINGLES.

Messrs. H. J. Hall & Son, of Berlin, Ont., write: "We noticed in the weekly edition of the LUMBERMAN of July 29th, that J. M. Green & Son, of St. Thomas, Ont., received a car of B. C. shingles with 270,000 on it, and freight of $300.00. We received a car in June with 360,250 shingles, with freight of $361.05. This, we think, is the King car, and hard to beat for quantity."

THE SPRUCE LOG SUPPLY.

The prospects of securing an ample supply of logs for the mills of Maine have improved during the past week, although it is still feared that there will be a considerable shortage. On the Chaudiere river it is reported there are 50,000,000 feet of logs hung up, and at considerable expense operators are building a dam in the hope of raising sufficient water to float the logs. The same thing is in contemplation, says the American Lumberman, on the Salmon river, where 25,000,000 feet are hung up.

It is regarded as certain that about 10,000,000 feet of the East branch logs, belonging to Marsh, Lawlor & Murphy, will be left above Grand Lake until fall and probably until next spring. The rear of the Kennebec drive left the Forks on July 21, and although two weeks behind the usual time, it is thought they will reach the boom as early as last year.

It is reported that Minneapolis capitalists have purchased a large interest in the Hastings Shingle Manufacturing Company, of Vancouver, B. C. It is stated that there will be no change in the management of the mills and that they will be conducted as formerly. The company own a saw mill, planing mill and two shingle mills at Vancouver and four shingle mills in Washington.

THE WHITE PINE SITUATION.

Northern white pine continues strong, with visible supplies much below the average, in some items this running to actual scarcity, and the demand all that could be asked for during the midsummer season. The Mississippi Valley Lumberman says that Northern Minnesota mills with few exceptions notice little let-up in business. The demand from Canadian points is still active. Thousands of new settlers have gone into Manitoba and the Canadian mills being unable to meet the call, large quantities have to be shipped across the border. Manufacturers in the northern part of Minnesota report the situation as being very strong. Prices are as well maintained as at any time of the year. Some of the mills in central Minnesota state trade has eased off a little, but this was looked for at an earlier date. Duluth has been somewhat quiet and the movement of lumber has not been heavy. There is considerable inquiry, however. Sales appear to be up to what could be expected and there is some stock moving all the time. The bulk of the spring sawing is not yet dry enough to ship and the larger part of the winter cut has been sold. A trifling decline in some few grades is noted, but as a whole the market is in very fair shape. Manufacturers operating below Minneapolis report no change in the situation. Trade is not heavy but prospects are good. Values in that section appear to be holding firm. The Iowa dealers are making more inquiry for stock than was the case three weeks ago.

No change is noted in the Minneapolis price situation. Values on nearly all items are well maintained. Dimension of about all sizes continues scarce and some few items cannot be picked up. There is plenty of inch stock to supply present requirements. With favorable sawing conditions stocks show continued improvement in both assortment and size.

It would seem that this fall white pine people will feel little competition from the southern yellow pine manufacturers. In the south is noted a severe and growing scarcity of railway equipment. Lack of motive power, principally, is holding down lumber shipments and wholesalers make the statement that not to exceed sixty per cent. of their orders will be shipped during the rest of the year. This will evidently mean that less yellow pine will enter into white pine territory and that the call for the latter will be increased accordingly.

Minneapolis manufacturers report a somewhat light demand, though very fair for July. A number state they receive all the business that they can take care of, because of depleted stocks. The time has almost arrived for a substantial increase n trade. This is shown by the larger volume of inquiries coming in. Line yards, while not buying heavily at this time, are looking around. A few large orders for future delivery have been placed by them. That fall business will be of very good proportions no one now doubts.

THE BOSTON MARKET.

The market at Boston for spruce lumber is still very quiet, and yet the situation is fully as strong as previously noted. The eastern mills are having difficulty in getting their logs down, and the consequent delay in shipments helps to maintain prices in the face of a quiet demand: Quotations are unchanged at: Ten and 12 in. dimensions, $21; 9 in. and under, $19; 10 and 12 in. random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7 and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9 in. and under, 10 feet and up, $18 to $18.50; 5 in. and up, merchantable boards, $17; matched boards, $18 50 to $20; out spruce boards, $13 to $14; bundle furring, $17.

There is a quiet market for hemlock lumber, with prices easier, though perhaps not quotably lower: Boards, 12, 14 and 16 feet stock, $14.75 to $15 for good eastern; Pennsylvania, No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Western pine lumber is in fair demand with fine common and uppers very firm and bringing full quotations: Uppers, 1 to 2 in. $84 to $87; 2½ to 3 in. $92 to $97; 4-in. $96 to $100; selects, 1-in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78; 2½ to 3 in. $84; 4-in. $86; fine common, 1-in. $67; 1¼ to 1½ in. $69; 2-in. $72; 2½ to 3 in. $80; 4-in. $82; barn boards, $23 to $33; coffin boards, $28 to $32.

Clapboards are quoted as follows: Extra, $45; clear, $43; second clear, $40; extra No. 1, $30.

Hardwoods are more quiet, but prices are steady and offerings are not heavy: Quartered oak, $75 to $83; plain oak, $45 to $47; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $54 to $60; sap, $43 to $48; common, $38 to $45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end dried white maple, $46; birch, 75 per cent. red, $45 to $50; northern elm, $29 to $31; Michigan elm, $34 to $37.

Shingles are steady: Extra cedar, $3.40 to $3.45; clear, $2.90 to $3; second clear, $2.25 to $2.40; extra No. 1, $1.50 to $1.75; British Columbia red cedar, 16-in. five butts to 2-in., $3.50 to $3.60; 18-in. five butts to 2 in., $3.75; five butts to 2¼ in., $3.90.

James Carr's saw mill at Carr's Mills, twelve miles from Woodstock, N. B., together with a quantity of lumber, was burned a few days ago. The loss is about $8,000.

CANADIAN NORTHERN RAILWAY CO.

A complete and most modern through passenger train service between Port Arthur and Winnipeg will be established on July 12th, thus enabling Tourists on their way to and from the East to get a glimpse of the fertile Rainy River Valley.

This new train will make connections at Port Arthur with Steamers of the North-West Transportation Company and Canadian Pacific Railway.

A fast freight service can be depended upon from Port Arthur to all points West. Route shipments care of Canadian Northern Railway at Port Arthur.

Folder and Pocket Map of the Canadian Northern Railway will be sent upon application to

The Canada Lumberman

TORONTO, ONT.

TIMBER LIMIT TRANSACTIONS.

George Schneider, of Maryboro, Ont., has sold 400 acres of land and his saw mill to Charles Neilson for the sum of $18,800.

The Victoria Times states that John Hanbury, formely of Brandon but now of Vancouver, has purchased 3,850 acres of timber lands on the Sechelt Inlet, British Columbia, from the Thomson Estate of Hamilton, Ont. It is said that $5 an acre was paid for the timber, which is cedar and fir of fine quality.

The sale of timber limits to be held this fall by the Ontario Government will, according to report, be the largest since 1885. In the neighborhood of 900 square miles, or 25 townships, will be offered. Much of the timber is located along the lines of the Temiskaming and Northern Ontario, Central Canada and Bruce Mines and Algoma Railways.

In the item in a recent issue in reference to the purchase of extensive timber lands on Vancouver Island, B. C., by an American syndicate, the area was inadvertently given as 50 acres. This should have read 50,000 acres. Later reports state that the price was $12 an acre, although no official announcement has yet been made. It is said that M. King, of Victoria, has an option on 150,000 acres at the same price.

The name of the Edwin S. Hartwell Lumber Company, Chicago, has been changed to the Hermann H. Hettler Lumber Company, the officers of which are: President, Hermann H. Hettler; vice-president, J. L. Philip; secretary, E. L. Casey.

MORE EXPANSION.

The well known saw manufacturing firm of E. C. Atkins & Company, Inc., of Indianapolis, Indiana, has been making rapid strides during the past ten years, their business having grown to immense proportions in all parts of the world, necessitating the establishing of branch houses and salesrooms.

This wonderful growth has been followed by a corresponding increase in the capacity of their great plant and, during the past four years, they have added several new and extensive buildings, such as their wood-working factory, hand saw building, gas works, etc.

But the continued great demand for the saws and tools bearing the Atkins brand has rendered even these many improvements inadequate for their requirements, and they were confronted with the problem of moving away from their present location, or acquiring a larger amount of land adjoining, in order to properly care for their rapidly increasing trade.

Thus was necessitated the most important step this firm has taken for several years. They have just purchased the entire plant occupied by the Parry Manufacturing Company, the largest buggy manufacturing concern in the world, employing over fifteen hundred men. This property joins the factory on the south, and consists of several large, well arranged brick buildings, besides several of small size, which can readily be made suitable for their needs

The magnitude of the Atkins plant, when the property just acquired is fitted up, can easily be judged when the fact is made known that the entire works now cover about three blocks, and most of this space is solidly built up with three, four and five story brick buildings. It is unquestionably the largest saw factory in the world to-day.

Messrs. E. C. Atkins & Company have branch houses at New York City, Memphis, Tenn., Atlanta, Ga., Minneapolis, Min., and Portland, Ore., besides sales offices in Chicago, Ill., St. Louis, Mo., Toronto, Can., London, Eng., Melbourne, Aus., Capetown, S. A., Paris, France, and elsewhere.

PERSONAL.

Mr. Charles C. Hughes, eldest son of Mr. C. Hughes, a retired lumber merchant of Montreal Junction, died suddenly in Montreal on July 12th from heart failure.

Mr. R. B. Eddy, a member of the firm of Eddy Bros. & Company, Blind River, Ont., was recently married to Miss Randall. Mr. and Mrs. Eddy will reside at Blind River.

Mr. W. B. Tindall, secretary treasurer of the Ontario Lumbermen's Association, has been elected vice-chairman of the Toronto branch of the Canadian Manufacturers' Association.

Mr. W. B. Mershon, of Saginaw, Mich., recently spent some time fishing in the Cascapedia region, in the Province of Quebec, and is said to have enjoyed the outing immensely.

Mr. Tichnor, office manager for the Pigeon River Lumber Company, Port Arthur, Ont., has tendered his resignation, to accept a position at Spokane, Washington Territory.

Judge Richards, of Winnipeg, has been appointed by the Dominion Government to hold an investigation into the complaints of an alleged lumber combine in the lumber trade of the North-West.

Mr. D. C. Craig, of Toronto, left last month for Newfoundland, where, in association with Mr. Alex. Barnet, of Renfrew, he is understood to be looking into the question of investing in timber limits.

Mr. R. C. Milvert, of the Imperial Forestry Service, India, was a recent visitor to Toronto. He is making a tour of the world on a year's leave of absence, inquiring into the forestry systems of the different countries.

Mr. Donald D. Craig, a graduate of the Ontario Agricultural College at Guelph, has been appointed on the staff of the United States Forestry Department at Washington. He has been sent to do some field work in Southern California.

WATEROUS BRANTFORD, CANADA.

WE MAKE A SPECIALTY OF

SMALL STEAM POWERS

For every kind of service—MILL, AGRICULTURAL and MARINE.

These engines are reliable and easily managed. Remarkably small and compact for the power developed. Light and portable. They will reverse instantly at any point. High-speed, noiseless, and non-vibrative. And they are above all economical engines.

We also devote ourselves to Small Steam Yacht Installations, using Fuel-Oil and Quick-Steaming Boilers, as well as to Direct Connected Lighting Units.

The **SLEEPER ENGINE COMPANY, Limited, Montreal.**

AMERICAN BLOWER COMPANY'S NEW OFFICE BUILDING.

The accompanying cuts show the spacious new office building lately built by the American Blower Company, of Detroit, Mich. The business of this company has increased so rapidly during the last two years that the old offices, which occupied valuable space in one of the factory buildings, became entirely inadequate to accommodate the increased office force.

This new building is devoted entirely to the Company's offices and is located on Russell street at the head of Harper avenue. No expense was spared in

NEW OFFICE BUILDING OF THE AMERICAN BLOWER COMPANY, DETROIT, MICHIGAN.

making this building a model of convenience and taste, and the building without question represents the highest development in modern office construction. The architectural design by Malcolmson & Higginbotham, architects, of Detroit, follows closely approved classic proportions, and the detail is adapted Colonial.

The first floor is occupied entirely by the different commercial departments, while the second floor is used by the engineering and drafting departments. The basement is used for the storage of catalogues, letter files, etc. The small building on the roof is the blue print and dark room, being located in that position to secure the best light for sun printing.

The building is equipped with every modern convenience, including electric lights, annunciator bells, dumb waiter, an outside telephone system and an independent inside, or house system, inter-connecting all offices and different departments in the shop. A switch-board for each of these systems is located in the lobby.

But the main interest in the equipment of this building is in the mechanical system of heating and ventilating. As the manufacture of heating and ventilating apparatus forms a large part of the American Blower Company's business, this part of the office equipment naturally received due attention. This system, it is claimed, represents the very largest and best practice in heating and ventilating. It has every possible advantage, with none of the many disadvantages of direct steam or hot water radiation, by producing an even, pleasant temperature, and perfect ventilation without drafts. In general the operation of the system is as follows :

The apparatus is located at one side of the basement, as shown in the accompanying plan. The fresh air enters the building through the basement window "F" and by means of the fan "A" is drawn over a coil of pipes "E", called the tempering coil. The steam pipes in this tempering coil are just sufficient in number and length to heat the volume of entering air to a temperature of 65 or 70 degrees Fahr. The fresh air is then drawn into the fan and forced over another heater "O". This is the main heater and is designed to heat the air to about 140 degrees. Beyond the heater is located a large brick chamber "G" called the plenum chamber. This serves as a reservoir for the heated air and from this chamber the air is conveyed by galvanized iron pipes "H" to the various offices. Under the main heater "D" is a passage or by-pass, as it is called, which permits a part of the air from the fan to pass under the main heater coil and into the plenum chamber. This passes into the lower section of the plenum chamber, which is separated from the upper part. Thus the plenum chamber is divided into two parts, as shown by accompanying sectional elevation, the upper chamber containing hot air at approximately 140 degrees and the lower section tempered air at 70 degrees.

As shown by this sectional view, each individual pipe leading off to the offices above, has two connections to this plenum chamber, one branch to the upper section and another to the lower. In each main where the pipe divides into these two sections there is located a set of double swinging dampers, or mixing dampers. Each set of these dampers is controlled automatically by a diaphragm valve shown on the outside of the pipe in the sectional view. These automatic valves are part of a system of automatic heat control which was furnished by the Johnson Service Company, of Milwaukee, Wis. These valves are operated by compressed air, which is supplied by a small air compressor, located in the basement. This compressor works by city water pressure and delivers air at about 15 pounds pressure. The system of temperature regulation is as perfect in operation as it is simple in principle. In each office is located a thermostat which can be set to control the room temperature at any desired point. These thermostats work upon the principle of the unequal expansion and contraction of brass and steel. These thermostats are all connected by head pipes, of about 3/8" bore, with their respective diaphragm valves. On the expansion or contraction of a piece of brass and steel in the thermostat, air pressure is admitted or cut off from the diaphragm valve and the mixing dampers are swung one way or the other as the case may be. It will be noted that these mixing dampers in swinging do not cut off the flow of air, but simply vary the proportion of hot and tempered air as controlled by the thermostat to maintain a constant temperature in the room. Thus a constant flow of pure air of the proper temperature is maintained to all times. Under the tempering coil there is also a by-pass similar to the one under the main heater. This by-pass is fitted with a swinging damper which is controlled by a thermostat placed in the upper part of the plenum chamber. Thus if the air in the plenum chamber becomes too hot, the thermostat opens the damper under the tempering coil, instead of through it. The air is admitted to each room at a point about eight feet above the floor.

As shown in the accompanying cut the fan is operated by a direct connected vertical engine. This engine is also the American Blower Company's own make, and is specially designed for this class of work.

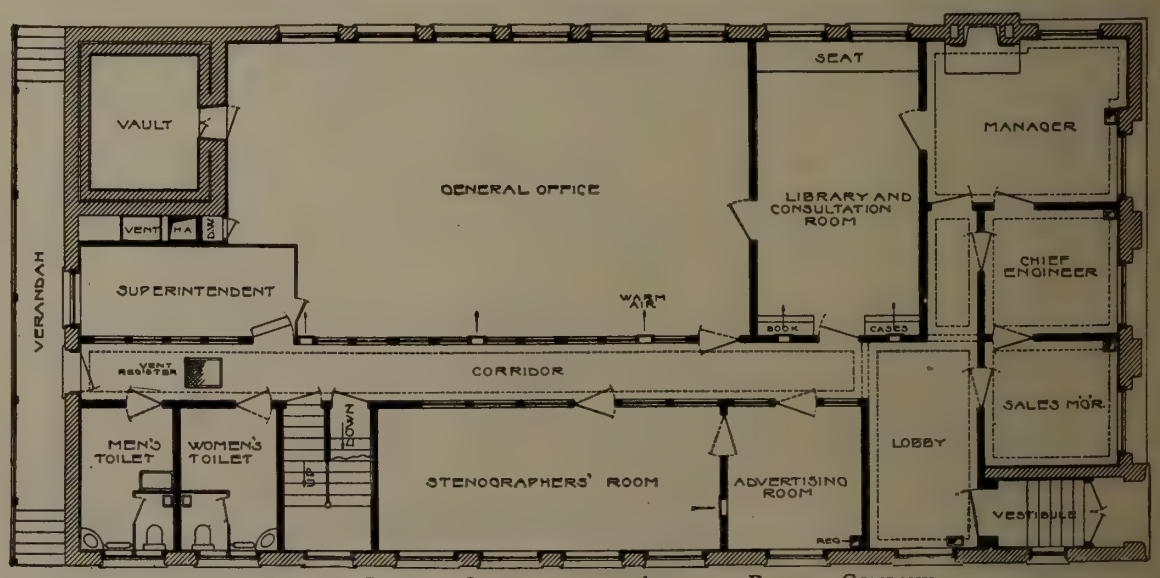
Another unique feature of this plant is the exhaust fan, which is direct coupled to the same engine which runs the heating fan and which draws the impure or vitiated air out of the building. Thus while one fan is discharging pure warm air into the building, the other fan on the same shaft is drawing out the impure air. This is the main feature of mechanical ventilation which has brought it into such general favor during the last few years for use in public buildings.

In each office on the first floor there is located an ornamental register face at the floor line, opening into the corridor which extends through the centre of office. The air is thence drawn down through the large register in the floor at the rear of the corridor and after passing through the exhaust fan is forced outside the building. The air from the drawing room and second storey offices is drawn down through the flue at side of vault.

The condensation from the heating apparatus is returned to a Webster feed-water heater located in the engine room of the factory, by means of the Webster vacuum system, which was furnished by the American Engineering Specialty Company, of Chicago. This same system handles all the condensation from two other heating plants located in the factory. The advantage of this vacuum system is that it eliminates the back pressure from the factory engine when using exhaust steam for heating and also removes the air from the heating coils and connecting pipes as fast as it accumulates, thus making the heating surface far more effective than it otherwise would be.

Only one thing remains to be mentioned, and that is the economy of this system. As the heating coils utilize the exhaust steam from the factory engine, which is brought into the basement through an underground conduit, and as the fan engine exhaust is also turned into the heater coil, the cost of operating the system is practically nothing, as only steam that would otherwise be wasted is used, and without back pressure. It is claimed that no other system offers the same economy, even temperature and pure air that this system does.

Taken as a whole, this building with its equipment is by many said to be the most complete of any building of a like character to be found in the United States.



PLAN OF GENERAL OFFICES OF THE AMERICAN BLOWER COMPANY.

NOTES ON THE PROPER CARE OF BOILERS.*

BY JOHN M. CONNAUGHY.

There has been a great deal written by different authors on the subject of care and management of boilers. Valuable advice has been given, yet boiler explosions and accidents still occur. Therefore too much cannot be said to impress upon the mind of the stationary engineer the importance of taking care of boilers.

The first and most important thing to begin with is a good, sound boiler, for if the boiler is an old and dilapidated concern, the best and most skilful engineer cannot make it safe and reliable, and the only advice I can give in any case like this would be to have nothing to do with it, as not only his reputation as an engineer would be at stake, but also his life and the lives of others.

When taking charge of a plant that has been run for some time, the engineer should lose no time in ascertaining as far as possible the exact condition of the boilers, and at the first opportunity he should make an internal and external examination, and see that they

*A paper read before the Ohio Society of Mechanical Engineers.

are free from scale and incrustation. If they are not, he should see that they are thoroughly cleaned both inside and outside of the shell. When a boiler is once thoroughly cleaned, the competent engineer will always resort to the proper means of keeping it so, as far as conditions will allow.

The accumulation of scale can be in a measure avoided by blowing small quantities of water from the bottom and surface blow-offs, as all minerals held in suspension become of greater specific gravity than the water. When heated, the tendency by specific gravity is to settle towards the bottom, while the lighter portions remain upon the top and float in the form of a scum. I have found that by frequent blowing from the surface and bottom blow-offs much of the mineral substance which forms scale will be carried out before it can settle sufficiently to attach itself to the iron. By so doing much of the trouble from scale may be avoided.

Notwithstanding all the care that may be taken, in some localities where the water is largely impregnated with minerals, a certain amount of scale will accumulate in spite of the efforts of the most careful and experienced engineer. There are various devices and compounds on the market which have proved effective and in a measure beneficial for preventing this scale. Others are of a doubtful character, and I would advise before using a compound to have a chemical analysis made of the feed water, as the nature of the supply receives too little attention.

I know engineers having charge of boilers with man-holes under the tubes who do all their cleaning from below the tubes and do not open the boiler on top. As it is impossible to wash all the dirt down from the top by washing from the under sides of the tubes, the boiler is in bad condition above the tubes before they know it and they will tell you that the boilers are in good shape inside.

In cleaning boilers, all manholes and handhole plates should be taken out, and the washing should be done from above and below the tubes. The engineer should then go inside the boiler and clean between them so that any scale that has been lodged between the tubes can be taken out. On the inside, all the seam heads and tube ends should be examined for leaks, cracks, corrosions, pitting, and grooving. The condition of stays, braces and their fastenings should be examined. The shell of the boiler should be thoroughly cleaned on the outside, as soot is a bad conductor of heat, holds dampness, and is liable to cause corrosion. All valves about the boiler should be kept clean and in good working condition. The pumps or injectors should be in the best working order. The connections between the boiler and water column, and also the gauge glass, should receive the closest attention, but they are sadly neglected by some engineers. The brickwork should be kept in good condition, and all air holes stopped, as they decrease the efficiency of the boiler, and are liable to cause injury to the plates by burning.

There should be a good heater in connection with the boiler, and the water feed as hot as you can work it, for feeding cold water causes too much contraction and expansion. This causes vibration in the seams, and makes them weak at those points. For example, if 80 lbs. of steam will do your work, never carry any more nor any less, as the rise and fall in pressure cause expansion and contraction of the plates.

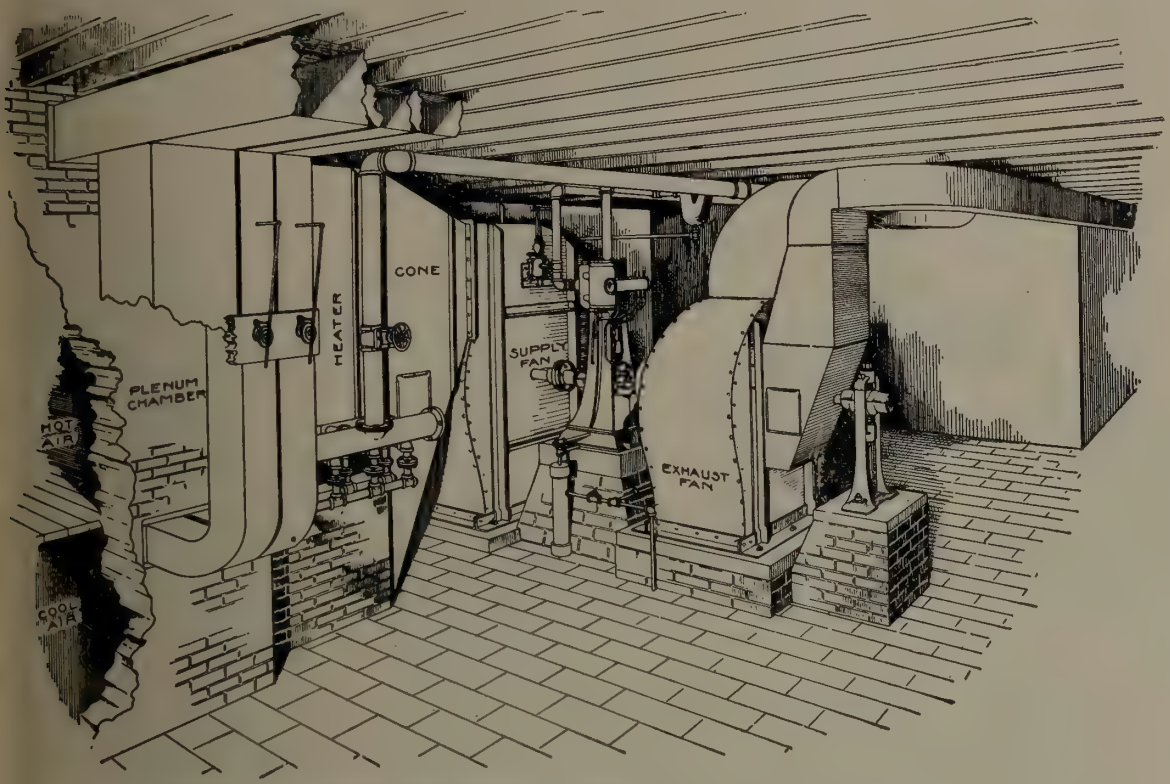
Never open the fire doors to cool your boiler. Close the ashpit doors and open the smokebox doors in case you get too much steam, as opening the fire door causes too much contraction by the cold air cooling the furnace. It would be better to allow steam to blow off from the safety valve, which will not in any way injure the boiler.

The safety valve should be raised from its seat every day to make sure that it does not stick from any cause, and observe from the steam gauge if the valve blows off at the pressure it is set for.

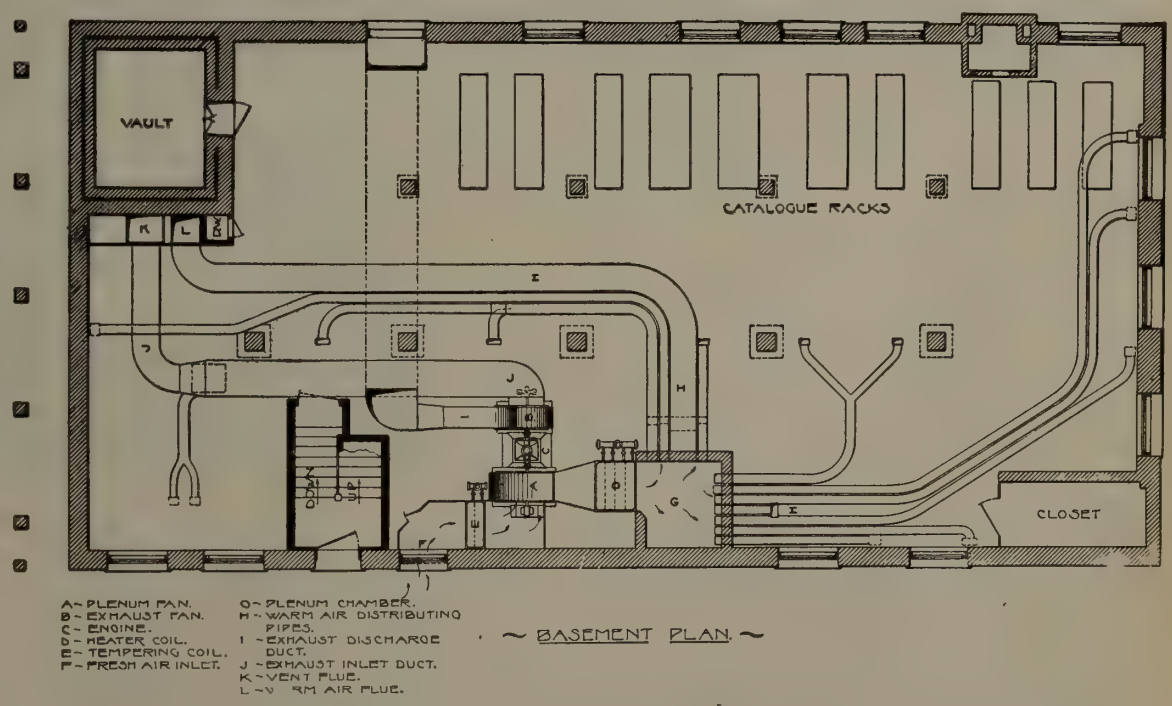
It is of the highest importance to keep the blow-off pipe free from sediment of any kind, as the pipe is liable to fill up and burn off, and the only way to keep it free is to open the blow cock often enough to keep everything flushed out.

The best time to blow off is in the morning before the fires have been started up, as a good deal of sediment in the boiler will then have settled to the bottom of the shell, and much of it will pass out when the cock is opened. Noon is also a good time, after the fires have been banked for half-an-hour or more, so that the water in the boiler has been quiet long enough to deposit the particles that are being whirled about with it through all parts of the boiler.

When the blow-off cock is opened, it must be remembered that it is not to be yanked wide open and then closed the same way. This practice is very dangerous. No valve about a steam system ought to be closed suddenly except in time of emergency, because the sudden strain on the pipe and fittings is liable to cause a rupture in the pipe or else break the elbow or valve. The boiler is the life of any plant, and my advice to all owners of steam plants is to keep a first-class engineer, one who is strictly temperate, pay him good wages, and give him the necessary material, and his plant will get the proper care and management.



Heating and Ventilating System in American Blower Company's New Building.



Basement Floor of American Blower Company's New Building, Showing Arrangement of Heating and Ventilating Apparatus.

—The anncuncement was made recently that Paul Mortin and Col. John Weir, of New York, and Walter S. Eddy, of Saginaw, had closed a deal for 2,500,000 acres of timber land in Mexico, said to contain 10,000,000,000 feet of standing timber. Mr. Eddy returned last month from a trip of inspection of the property and is reported to have withdrawn from the purchasing syndicate. He thinks it will be years defore that country will be sufficiently developed to take a much greater quantity of lumber than it does now, and regards Canada as affording him a much better field for operations.

MACHINERY EXHIBIT.

An attractive exhibit is that of H. W. Petrie, the well-known dealer in general machinery, Front Street, Toronto. In common with other industries in Canada, they have found their old quarters inadequate to meet the demands of the rapidly developing trade of the country, and therefore determined to annex a large new warehouse. This addition more than doubles the space lately occupied, giving a floor

H. W. PETRIE'S MACHINERY DEPOT—VIEW FROM STATION STREET.

space of over sixty thousand square feet.

The illustrations we give herewith will serve to show the magnificent nature of this new machinery depot, situated as it is right in the centre of the city, next the Union Depot.

The new addition will be used for the display of new machinery only, the re-built machinery being shown in the building that has been occupied for years. By the great improvement Mr. Petrie will be able to meet adequately any demands that may be made upon him for the requirements of the trade.

During the Exhibition in Toronto, the new building will be open to the public daily, and also in the evenings, when it will be gorgeously illuminated by electricity. The immense dome of the new building has its galleries draped with bunting and flags. Three more large galleries and an immense crane are to be put in the building. Thirty car loads of new machinery of all kinds is now exhibited. Altogether nearly one thousand machines and parts are exhibited, which makes it a magnificent sight and of great interest to all users of machinery.

A cordial invitation is extended to all visiting Toronto to call and see this exhibit. Those arriving by train can walk through the Depot into the Petrie Machinery Exhibit and take street cars at the main door for any part of the city.

The complete stock of iron and wood working tools here shown includes such lines as are manufactured by the Cincinnati Milling Machine Co., the Cincinnati Planer Co., the Bickford Drill Co., the Waterous Engine Co., London Machine Tool Co., and many other makes of high grade tools.

The shipping facilities of the Petrie Company are unexcelled. Both the Grand Trunk and Canadian Pacific lines run right up to the premises, while the wharves are conveniently near.

MUTUAL POLICY CONTRACTS.

The following paper bearing upon the subject of lumber fire insurance was read at the last convention of the National Wholesale Lumber Dealers' Association by Mr W. C. Johnson, president of the Lumber Mutual Fire Insurance Company of Boston :

In addressing this meeting of companies specially engaged in the insuring of lumber and woodworking risks, I have to congratulate you all on the success attained by the several companies in undertaking insurance of risks always considered by all underwriters as extra hazardous. I attribute this success principally to the fact that you are mutual companies.

I am informed, and I believe it to be true, that companies which issue both stock and mutual policies, insuring identically the same classes of risk and at the same rate, find the loss ratios to premiums larger on the stock policies than on the mutual policies.

MUTUAL POLICY HOLDERS MAKE FAIR CLAIMS.

The mutual policy holder has an interest in the company, which tells in increased care and attention to his own risk, with resulting benefit to the company in saving on losses and to himself in increased dividends.

When losses come the policyholder in a stock company, understanding that the stock company is in the business for profit, he cannot help but feel, in greater or less degree, according to the man, that it is his turn now, and the majority feeling they have always paid to high a rate, the loss claim is certainly made no less because of that feeling.

In loss claims of a mutual company which has fixed a reasonable rate and paid a reasonable and regular dividend, the assured's claim is, in a great majority of cases, fairly made up to cover his actual loss and damage, and all idea of making a profit out of the fire eliminated.

For these reasons in making it my special business to adjust the losses for the Lumber Mutual, the adjusting of all losses the past eight years without a reference in any case has been due as much to the fairness of the claims as to any particular skill of my own in such business. There have been claims presented I could not approve, but we always manage to make a compromise adjustment. Lumbermen are used to settling differences amicably, so we get along well.

Having such fair and reasonable policy holders, I know that every man representing these mutual companies has always in his mind, as his first duty, to do equal and exact justice between the policy holders as to all matters of jugdment on his part relating to rates and conditions of contracts.

Comparison of the risk under consideration for the time being with other risks of like character and like protection is one of the fairest ways to arrive at a correct rate. It is, however, absolutely essential to correct and fair judgment that the conditions of contracts be alike, as to the risks compared. I will go further and say that it is absolutely essential that all risks in a mutual company under like conditions of exposure and protection must have identical conditions in a policy contract or you cannot do a mutual and equitable business or fix an equitable rate on each risk.

This brings me to the consideration of "Mutual Policy Contracts." How to make them mutual is the question—how to bring each policy holder in on an exact level, and do justice and be fair to all.

To my mind, the most important question, and the one always before me, is the question of the relation of the amount of insurance carried to value of the property protected.

RELATION OF INSURANCE TO VALUE.

Having the best possible plan of the risk and its exposures and the most thorough knowledge of the private and public protection and of the care the business receives from the managers, neither myself nor any other who has to pass on the rate can know if it is adequate unless they know the relation of insurance to value.

If they know the insurance is 20 per cent, of value at the time the policy is issued, or 40 per cent., or 60 per cent., or 80 per cent., they may fix an adequate rate, based on the fact that a 20 per cent., or 40 per cent., or 60 per cent. or 80 per cent. loss on the property will be a total loss to the company.

As a suggestion how the rates be graduated:

If 80 per cent. insurance to value is carried, 1¼ per cent. may be adequate.

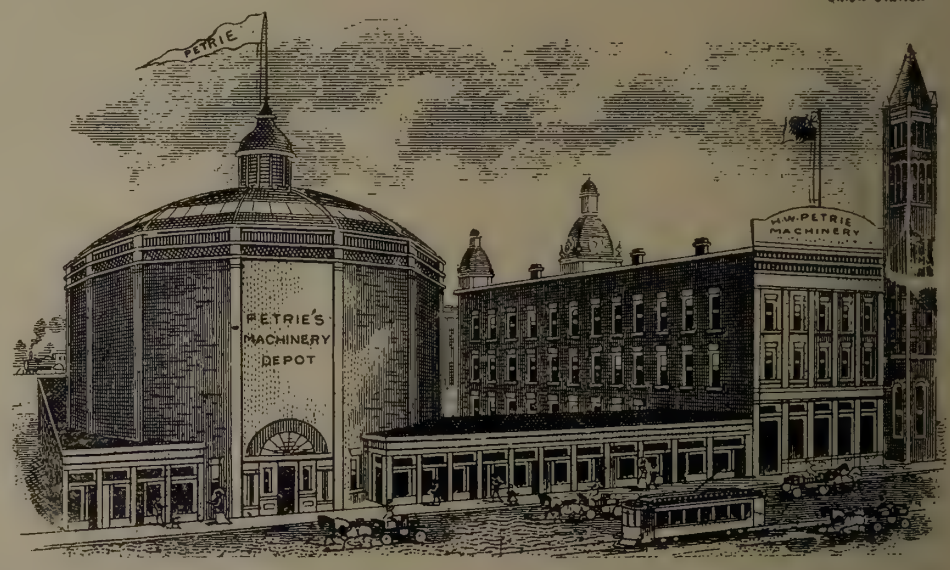
If 60 per cent. insurance to value is carried, 1½ per cent. may be adequate.

If 40 per cent. insurance to value is carried, 1¾ per cent. may be adequate.

If 20 per cent. insurance to value is carried, 2 per cent. may be adequate.

Having decided on the rate that is adequate, considering that a certain percentage of insurance is in force at the time of the issue of the policy, it is necessary, if the rate is to continue fair and equitable to all, that the per-

UNION STATION



H. W. PETRIE'S MACHINERY DEPOT—VIEW FROM FRONT STREET.

centage of insurance to value must continue during the life of the policy.

For illustration: If a $20,000 stock of lumber is insured for $12,000 (60 per cent. of value) at a fair rate of 1½ per cent., and the stock of lumber is increased to $30,000, so that the $12,000 insurance is only 40 per cent. of value, the rate of 1½ per cent. at once becomes inadequate, and should be raised to 1¾ per cent.

As it is manifestly impossible for the insurance companies to know of these changes of value of stock, the only equitable way as between policy holders to carry the risk is to require the assured to guarantee a certain percentage of insurance to value. It will make no difference what percentage of value you fix upon, so long as all policy holders insure to same percentage of value.

Suppose a value of $20,000 is to be protected.

If all insure for 20 per cent. of value on $4,000 at 2 per cent., $80 premium.

If all insure for 40 per cent. of value on $8,000 at 1¾ per cent., $140 premium.

If all insure for 60 per cent. of value on $12,000 at 1½ per cent., $180 premium.

If all insure for 80 per cent. of value on $16,000 at 1¼ per cent., $200 premium.

All paying in the same premium for protection to the same percentage of value of property, the business becomes mutual in fact as well as in name.

But now suppose one policy holder carries $16,000 insurance at 1¼ per cent. and pays $200; another carries $4,000 insurance at 2 per cent. and pays $80. Suppose a $4,000 fire in each case. One man has paid in $200 premium and receives $4,000. The other man has paid in even at the higher rate only $80 premuim, and he also receives $4,000. Notwithstanding the difference in rate charged, the man who has paid in only $80 premuim, receives just as much on the loss as the man who paid in two and one-half times as much. This is not mutual insurance. Much less is it mutual insurance where the assured is allowed to carry any percentage of insurance to value he pleases, all at the same rate.

Now if it is necessary in doing a mutual business, and so that we may decide on a fair comparative rate that all policy holders should carry the same percentage of insurance to value, what percentage shall we ask for.

We find an 80 per cent. coinsurance clause in almos universal use. Why not insist on that as our basis for all rates on all risks under fire department protection?

The Lumber Mutual has been working on that basis for a large majority of its risks, and its regular loss ratio to premiums varying not over 4 per cent. in any one year with another I attribute to the incorporation of this correct principle of underwriting in its policies. We would like to persuade all other companies doing the same buisiness to adopt the same plans and save much unnecessary work and correspondence with the policy-holders and between the companies.

The equity of the 80 per cent. coinsurance clause is so true that it does equal and exact justice between the policy holder who carries insurance to 80 per cent. of value and one who carries insurance to only 20 per cent. of value.

To illustrate: On $10,000 to be protected and rate of 2 per cent., one policy holder carries $8,000 at 2 per cent., and pays $160; another policy holder carries $2,000 at 2 per cent., and pays $40. The latter coinsures and himself carries $6,000 at 2 per cent., saving $120. Under a loss of $1,000 on first yard, the owner being insured to 80 per cent. of value, receives his full $1,000 loss. The other party being insured to only one-quarter of 80 per cent. of value, or $2,000, and coinsuring himself for $6,000, receives from the companies one-quarter part of $1,000, or $250, and pays himself three-quarter part of $1,000, or $750.

You will notice he paid $40 premium and receives $250, while the other party paid four times as much premium, or $160, and receives four times as much loss, or $1,000. This is equitable and mutual insurance.

The fact of an 80 per cent. coinsurance clause in policies will not prevent the policy holder carrying more or less than 80 per cent. of value in his policies, as he elects. I am not, however, in favor of allowing any reduction of rate for insurance above 80 per cent. I believe if the owner has a chance to stand part of his loss the risk will be better cared for.

Many do not understand exactly how the 80 per cent. coinsurance clause works, but many more do, and some write us as follows: "We will not entertain such a proposition on our lumber because the fluctuations are so wide and so rapid."

How can we name a fair rate to a party who knows the conditions of his risk are subject to such "wide and rapid" changes? He wants the insurance company, which knows nothing about these changes, to take all the chances on them. We respectfully decline to carry such risks without coinsurance.

Another party a few days since proposed to us to pay a $2.40 rate for $10,000 insurance on $50,000 value, because, as they said, $10,000 was all they were likely to lose. That we declined, because a 20 per cent. loss on any part of the risk meant a total loss to the company.

Before the days when coinsurance was so nearly universal as now, I well remember having insurance to about $5,000 to $8,000 on my $20,000 to $25,000 value of stock, and special agents ordering my insurance cancelled because I carried so small a percentage of insurance to value.

Outside of the fire department or adequate private protection the condition is different, especially as to mills whose life depends on the owner's care.

It is not safe business if the owner be permitted to carry insurance to full value. He might lose all interest to protect the plant. The surest way to interest him in event of a loss is to attach a three-quarter cash value clause to his policies.

This limits the assured's collection to 75 per cent. of the actual cash value at time of fire, leaving the owners to lose 25 per cent. of such loss and damage, if total. This fixes in the owner's mind the financial necessity to him to use every means in his power to protect the property.

These two principles—of 80 per cent. coinsurance on protected property; 75 per cent. cash value clause on unprotected property—is the keystone of the arch on which the Lumber Mutual is being built up. The companies adopting these principles are the surest to succeed, are the fairest to the assured, and are mutual.

With these two questions of policy disposed of, we may construct the forms of contract and lay down the principle:

(1st) Each building and all other articles of fixed or unchanging values shall be specifically insured to not over 80 per cent. of owner's valuation.

(2nd) For the convenience of the assured and to protect him better, his stock in trade should be blanketed in all sheds and in yard. The blanket policy floats over and protects the assured against his every change in value of stock in each shed or location. Any yard may have a shed containing to-day $2,000 worth of stock, insured for $2,000. In a week hence additions to value may make stock in same shed worth $5,000.

If the lumber in this shed is specifically insured, the owner one week has 100 per cent. insurance to value and the next week only 40 per cent. of value. While the value in this one shed is increasing, that in another may be decreasing, so that if both are specifically insured the changing values of stock may make the insurance in one case be only 40 per cent. of value and in another 200 per cent. of value.

In one case in event of fire the assured collects only 40 per cent. of his loss. In the other case he collects his loss, but only gets one-half what he paid for.

A blanket form covering stock in all buildings and in yard and on cars, while at assured's risk, is but justice to the assured, and let it float over and protect the whole property.

Interior View of H. W. Petrie's New Machinery Depot.

INSURANCE ON LUMBER AT MILLS OR POINT OF MANUFACTURE.

The condition under each insurance of this kind must be taken very much as the mills themselves. Some have protection and some none; some forest exposure and some none; some railroad exposure and some none; some with varying clear spaces from mill and some none. Some are piled in one block and some in six blocks, separated by anywhere from 100 feet to one-fourth mile, and if we insure these all at the prevailing rate we have nothing mutual about it. Each risk must be separately and specifically rated.

Until this can be done we are taking these risks at the best obtainable rate, but always inserting a "Lcoation Clause," so called, to prevent our getting caught, as once at a mill in Maine, where by insuring for $10,000 covering lumber "stuck along switch tracks," we found, on investigation, the switch tracks about two and one-half miles long and five separate and distinct yards, with over one-fourth mile between and about $10,000 value in each yard.

By insuring for $10,000, $50,000 value of lumber was fully protected. Our friends were pratically insuring five risks for one premuim.

One enterprising manufacturer I heard of, from Wisconsin, I beleive, laid his seasoning yard out with 300 feet clear space down the centre, and with separate locations for storage of lumber each side, and 200 feet clear space between each location.

Then by sticking up about $25,000 worth in each location, and having eight separate locations, separated one way by 300 feet space and the other way by 200 feet space, had the whole so nicely arranged he wanted to insure for $25,000 only on a blanket form at a flat rate and protect himself fully, while the insuring company carries eight separate risks of $25,000 each — $200,000 in all for one premuim on $25,000.

Nice little scheme, wasn't it, particularly if he could succeed in working it on a mutual company and save 20 or 30 per cent. dividends besides?

WOOD PULP DEPARTMENT

THE SCANDINAVIAN PULP MARKET.

Mr. C. E. Sontum, Canadian Government Commissioner for Norway and Sweden, says regarding the pulp market: "The bad collapse of the market for mechanical wood pulp, after a protracted period of shortage of production, strongly points to a considerable overproduction, and as the bids now coming to hand are even kroners below the cost price, the Norwegian pulp-makers fully acknowledge the desirability of, or rather the necessity for a large restriction of the output. The management committee of the Norwegian Wood-Pulp Association is in active correspondence with the Swedish section on this question, and it is to be hoped that at the general meeting of both sections to be held in the near future an agreement may be arrived at."

DUTY ON ROSSED PULP WOOD.

A final decision has apparently not yet been reached by the United States authorities concerning a duty on rossed pulp wood. As stated in last issue, the Treasury Department decided that a duty of 35 per cent. ad valorem should be levied on rossed and shaved pulp wood imported from Canada. Many manufacturers of pulp and paper protested against the assessment of the duty and demanded an investigation. A hearing was to have been held on June 29th, and meanwhile the order was rescinded. The hearing, however, was postponed, and it is said that it will take place about the 1st of August.

The fact that the Treasury Department concluded to revoke the action, temporarily at least, is regarded as paramount to an admission that the duty should not have been levied, and the interests concerned believe that the final outcome will be the rescinding of the regulation.

THE PULP INDUSTRY IN NEWFOUNDLAND.

It is predicted that the recent purchase by Harmsworth Bros., of London, Eng., of extensive timber lands in Newfoundland for pulp purposes will mark the beginning of an important industry in that colony. Much of the spruce timber is what is designated "black spruce," which is said to produce "without exception the best and strongest pulp fibre of any wood in Europe or in the Northern States of America." Again, Newfoundland is rich in sulphur, which is found in the form of iron pyrites, frequently yielding 50 per cent. of pure sulphur. The water powers which the country possesses are of great power and extent. In many respects, indeed, Newfoundland presents itself as an almost ideal source of pulp and paper supply.

The state of the law in Newfoundland until a year or two back had a good deal to do with the comparative backwardness of that colony in the exploitation of its timber resources. Up to 1899 the payment of an initial bounty of $25 per mile entitled a lessee to a lease for twenty-one years, which was renewable. In that year, however, a new law came into force, under which the first bounty payable was one of five dollars per mile, whereupon a lease issues for ninety-nine years, subject only to an annual rental of three dollars per mile and to some other conditions by no means so burdensome as the other ones were.

POSSIBILITIES OF THE PULP INDUSTRY.

On several occasions we have been asked, apparently by persons looking for a field for the investment of capital, to give our views as to the prospects for pulp mills in Canada. A late communication asks whether there is a demand for all the pulp that is now produced in Canada.

It is impossible to answer these questions with any degree of certainty. The pulp business will probably be found to be profitable only to the extent of the prosperity of the country at large. Should there be a reversal in the near future to a period of depression, it is unlikely that the pulp industry would continue prosperous while other branches of trade were in an unhealthy condition. Other things being equal, however, it would seem that the pulp industry offers fair possibilities for the investment of capital.

The increase in the production of pulp that has taken place within the past few years will needs be reckoned with. Many new mills have been built, while others are in course of construction, some of them of large capacity. When these are in operation the production will have been greatly increased. The consumption of paper is growing very rapidly, and the market has up to the present time been able to consume the increased production of pulp. Whether this will be the case in the future remains to be seen.

Pulp mills that are favorably situated for export trade should be found paying investments, providing they are properly designed and so located as to obtain a supply of pulp wood at reasonable cost. Too many mills have been built in Canada without the employment of a first-class designing expert, and the results tell their own story.

The appreciation which has taken place in the value of spruce and other kinds of timber has not been reflected in the price of paper. If the cost of pulp wood is to continue to advance, manufacturers of pulp may probably find that it will be necessary to advance the price of pulp in order to realize a fair margin of profit on the capital invested.

The position of the pulp industry of this country would doubtless be improved if the laws entirely prohibited the export of pulp wood. The situation at present permits the export of pulp wood from the provinces of Quebec, New Brunswick and Nova Scotia, while exports of pulp to the United States are subjected to a duty. The natural inclination, therefore, is to import the pulp wood rather than the pulp.

PROCESS OF MAKING WOOD PULP.

Among the patents recently issued is one to Viggo Drewsen, of New York, for a new process of making wood pulp. "It is known to those skilled in the art," says Mr. Drewsen, "that when wood is cooked in the bisulphite liquor the liquor must penetrate the wood thoroughly before the temperature of the contents of the digester is raised above the boiling point of water. If the wood chips are not thoroughly permeated by the liquor, the sulphurous gas and the steam in the digester will cause the incrusting or non fibrous material to turn brown, and thus produce spots in the pulp. The object of my invention is to cure this defect.

"The ideal method would be to exhaust the air from the digester containing the wood and then force the cooking liquor into the wood under pressure before the steam is admitted to the contents of the digester; but this method of producing the vacuum and the use of pressure is too expensive for practical use. I have found that practically the same result can be obtained if the wood chips are dipped into a suitable liquor at ordinary temperatures and stored in the bins before the wood is introduced into the digester. It would not be practical, however, to use the ordinary bisulphite of lime liquor for this purpose, because the odor of the sulphurous acid is too strong and offensive and because the acid liquor destroys the material of which the bins are composed.

"My invention consists in the discovery that I can obtain the desired result by soaking the wood chips prior to their introduction into the digester and the ordinary cooking liquor in a solution of a monosulphite which is soluble in water, such as $Na_2SO_3MgSO_3$, etc. The water solution of the monosulphite is neutral, or slightly alkaline, has no odor, and does not attack the material composing the bins. The strength of the solution may, of course, be varied, but I have found that a solution of four parts of sodium sulphite (Na_2SO_37aq) to one hundred parts of water is efficient."

The Barkley Sound Pulp Company, Limited, has been incorporated by the British Columbia Government, with a capital of $100,000.

The decision of the Scandinavian Wood Pulp Association to restrict the output of mechanical has not so far had the desired effect of raising prices, says Pulp and Paper, of London, Eng., as at present moist pine can be freely bought at 36s. c.i.f., and a fair amount of business is being transacted. Although the makers of sulphite pulp are fairly firm in their quotations of £7 5s c.i.f. for strong and £7 15s c.i.f. for bleaching qualities, we still hear of parcels being disposed of at less, particularly for delivery this year, although for next year prices are decidedly firmer. The stocks of soda pulp evidently still remain large, as both for prompt and forward low prices are accepted, viz., £6 15s to £6 17s 6d. c. i. f.

PULP NOTES.

The death is announced, in London, England, of E. A. Bremner, who organized the Sturgeon Falls Pulp Company.

The Bowdoin Paper Company, of Topsham, Me., have lately received a large quantity of pulp wood from Nova Scotia.

The Canada Paper Company have completed their paper mill at Windsor Mills, Que., and are about to build a new pulp mill.

E. B. Hickman & Sons, of Westchester, Pa., have a contract to take out a large quantity of poplar wood, which will be shipped to Philadelphia for making pulp.

The Laurentide Pulp Company has made application to have its name changed to the Laurentide Paper Company, Limited, and for power to increase its capital to $2,800,000.

According to the annual report, the Quebec and Lake St. John Railway Company carried in one year 2,256 cars of pulp wood and 555 cars of pulp and paper, out of a total of 12,319 cars of freight.

The Sault Ste. Marie Pulp & Paper Company is installing a fifteen ton paper plant in its power house building on the American side. The pulp for the mill will be taken from the company's plant in the Canadian Soo.

A dispatch from Victoria, B. C., says that Benton E. Turner, a New York capitalist, is about to erect a pulp mill at the mouth of the Powell river, having secured 250 square miles of spruce timber lands located along the coast.

The William Hamilton Manufacturing Company, of Peterborough, Ont., are supplying water wheels and other machinery for the large addition now being made to the pulp mill of the Chicoutimi Pulp Company at Chicoutimi, Que.

It is expected that the large pulp mill of the North Shore Power, Railway & Navigation Company at Seven Islands, Que., will be completed for operations next year. The capacity of the mill will be about 250 tons of pulp per day.

The Cushing Sulphite Fibre Company, of St. John, N. B., last month elected the following officers: President, Captain Partingdon; vice-president, Thomas McAvity; secretary and treasurer, H. W. Schofield; manager, James Beverley.

It is now definitely known that the new mill under construction at the Chaudiere by J. R. Booth, of Ottawa, is to be a pulp mill. It will have fifteen grinders and fifteen water wheels. It is said that Mr. Booth will build a paper mill also.

The Nova Scotia Wood Pulp & Paper Company, of Mill Village, N. S., are just completing a ground pulp mill to replace the one burned last spring. It is equipped with four New England grinders and will have a capacity of 40 tons per day.

The Jenckes Machine Company, of Sherbrooke, Que., have installed three new water wheels for the Montrose Paper Mills at Thorold, Ont. The wheels are of the Croker patent, set in a horizontal cylindrical steel case 17½ feet long x 10 feet in diameter.

A sale was held in Quebec City a few days ago of a shipment of 2,636 bales of pulp landed in a damaged condition from the steamship Protector, which was stranded on Bar Reef at the mouth of the Saugenay River. It was bought in by J. McNaughton, of Quebec, at twenty-five cents a bale.

According to a dispatch from H. M. Consul at Stettin, a British firm is now erecting at Sydowsan, near Stettin, a factory for the production of artificial silk from wood pulp by a new process. The pulp is treated with chemicals, pressed by hydraulic power through minute tubes into a further chemical bath, after which the finished product is spun. It can be woven into any desired fabric, which is said to be equal to fine silk.

THE NEWS

—W. A. Smith has opened a lumber yard at Lumsden, N. W. T.

—C. W. Milestone has recently established a lumber yard at Moose Jaw, N. W. T.

—Campbell & Ferguson, Limited, have been incorporated at Melita, Man., to deal in lumber.

—A post office has been opened at Sandilands, Man., where Reimer Bros. have their saw mill.

—Turnbull & McManus, sash and door manufacturers, Winnipeg, are building a new warehouse.

—J. G. Hutchinson has sold out his interest in the Canada Lumber Company, Vancouver, B. C.

—The Prairie Lumber Company has purchased the lumber yard of Klasson & Wiede at Altona, Man.

—The Imperial Elevator Company will establish lumber yards at Napinka, Medora and Waskada, Man.

—B. J. Gilligan is erecting a saw mill at Mattawa, Ont., for the purpose of sawing pine and hardwoods.

—The Schevlin & Carpenter Lumber Company have purchased a site and will build a saw mill at Rainy River, Ont.

—Vigars & Company are rebuilding their planing mill at Port Arthur, Ont., which was destroyed by fire last month.

—The Champoux Company has been incorporated at D'Israeli, Que., with a capital of $96,000, to manufacture lumbber, etc.

—The Hunting-Lea Lumber Company, Limited, has been incorporated by the British Columbia Government, with a capital of $20,000.

—The Cushing Bros., Limited, with a capital of $200,000, have filed articles of incoporation, with head office at Calgary, N. W. T.

—The G. B. Housser Lumber Company, Limited, has been incorporated to do business at Portage la Prairie and other places in Manitoba.

—Incorporation has been granted to the Northwest Lumber & Commission Company, Limited, of Winnipeg, to manufacture and deal in lumber, saw logs and pulp wood.

—John McLennan, late of Syracuse, N. Y., has established a new business in Quebec, the purpose of which is to bring together people interested in Canadian timber.

—It is rumored that timber lands comprising 12,000 acres have been purchased by R. H. Pope, member for Compton, Que., on behalf of a syndicate of New York capitalists.

—The Canadian Wood Manufacturing Company expect to have their new factory at Farnham, Que., completed at a very early date. The superintendent of the company is Grant Morden.

—The great spruce forests of nothern Canada, if placed upon the territory of the United States, would extend from Lake Erie to Georgia and from Maine to California, says an American statistician.

—A. J. Burton, of Parry Sound, has written to the city council of Vancouver, B. C., to learn what inducements would be offered for the establishment in that city of a manufactory of saw milling machinery.

—The British Columbia Government has rescinded the Order-in-Council passed last month providing that all timber limits must be surveyed before the issue of special licenses to cut and remove timber therefrom.

—The saw mill at Tobique, N.B., recently acquired by Donald Fraser & Sons from the Tobique Manufacturing Company, is running at full blast, the crew numbering 150. The average output of the mill is 150,000 feet daily.

—Investigation has been made into some fires in the timber limits of Tait & Turnbull, near Huntsville, Ont. As a result a man named Miles is charged with having set fire to the firm's lumber camp and is now held for trial.

—The Elgin Milling Company is seeking incorporation, to engage in the manufacture of lumber and woodenware at Elgin, N. B. Henry R. Emerson, of Dorchester, and David T. Lutwick, of Alma, N. B., are interested.

—The Brotherhood of Carpenters and Joiners of America have organized the Montreal Co-operative Society for the manufacturing of doors, sashes and mouldings. It is a society of working men and is to have a capital of $20,000.

—James and Arthur Moore, Melbourne, Australia, were recent visitors to Canada. They are extensive dealers in lumber and buy a quantity each year from St. John firms. They left for Europe, where they will visit the lumber ports of Norway and Sweden.

—A new company has been formed in Ottawa under the name of the Gulline Manufacturing Company, Limited, to acquire the business of H. L. Gulline, manufacturer of horse collars and other articles of leather. Those interested include David McLaren and E. C. Whitney, lumbermen.

—W. A. Farnham will manage the new saw mill now building at Kingsport, N. S. It will be 100 x 50 feet, with two wings 65 x 25 feet. The lower storey will contain an 80 horse power engine, purchased from the Burrill-Johnson Iron Company, of Yarmouth. The second storey will be equipped with a large rotary saw, moulders, matchers, edgers and lath machines.

—The Red Deer Lumber Company, of Red Deer, N. W. T., was recently organized by United States capitalists, including O. A. Robertson, F. B. Lynch and J. C. Wood, of St. Paul, and C. A. Chambers, of Minneapolis. Large areas of timber lands were purchased in the Saskatchewan district, where an immense saw mill is under construction, and recently heavy purchases have been made of timber limits in British Columbia. The solicitors for the company are Hough & Campbell, of Winnipeg.

—C. T. W. Piper, of Vancouver, B. C., has patented a logging machine which does away entirely with the snatch block. The haul-back rope is conducted over a loose pulley acting in conjunction with a combination of loose rollers, fixed at any required angle and so arranged that the haul-back rope and the fall or main rope are kept perfectly clear of each other. According to the nature of the ground the machine is then fixed at the required angle so that logs can be hauled up and down the side of the mountain with perfect ease.

—An unusual accident occurred in a lumber camp operated by N. Moran at Thunder Bay, B. C. The last part of the log haul from the woods is down a steep bridge. It is the practice, in order to hold back the logs, to cover the timbers of the skid-road with sand. On this particular occasion the logs were slippery and the sand did not have its usual retarding effect. The logs began to slide down the hill and before the bottom of the grade was reached had run through the double line of horses and on down the hill. One horse was killed outright, while two others were badly injured.

—W. H. McAuliffe's new planing mill at the Chaudiere, Ottawa, will be running shortly. The mill is a solid brick, two storey structure. Clear of posts the dimensions are one hundred feet by forty feet. On the first floor will be the matchers, resawing, ripping and moulding machines. The second floor will be fitted up as a machine shop. Alongside the mill sorting platforms and sheds are being built to facilitate the handling of the lumber. The mill is situated on the Canada Atlantic Ry. near Mr. McAuliffe's Ottawa yard.

CASUALTIES.

—John Reynolds, who worked at the Hastings camp, at Bear River, B.C., was killed by a falling tree.

—H. Williams, an employee of Chew Bros., Midland, Ont., fell across a saw table in the mill and was instantly killed.

—Carl Courser, an employee of the Hastings saw mill at Vancouver, B. C., fell across a circular saw and was instantly killed.

—W. J. Scott, lumberman, of Springhill, N. B., had one of the bones in his right ankle broken recently and was laid up for some time.

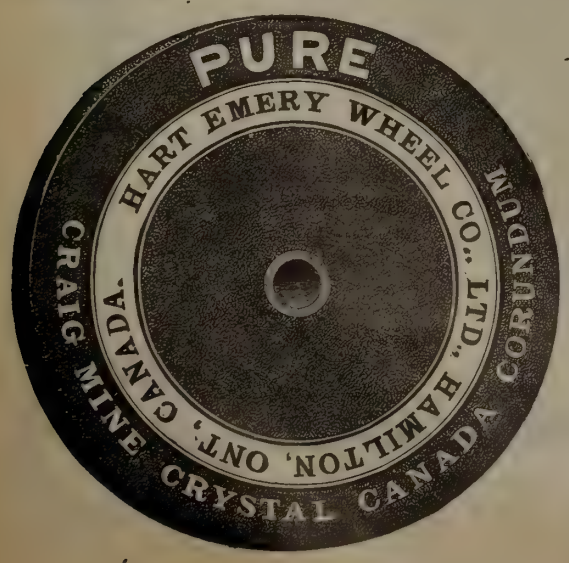
—Two cases of slipping off a log to death occurred at Enderby, B. C., last month, the victims being Stewart James and Arthur Wavy, employed at the saw mill there.

—A young lad of 16 years of age, named Percy Young, had one of his arms torn from its socket by being caught in the machinery in the St. Maurice Lumber Company's mill at Three Rivers, Que.

—William Tucker, for three years employed as logger by the Victoria Lumber Company, Chemainus, B. C., was instantly killed by a logging engine on the track of the new line leading from Ladysmith harbor.

—Bruce Carmichael had both legs broken in one of the logging camps of the Chemainus Lumber Company near Nanaimo, B. C., on July 15th. He was attending to an endless rope when the cable broke, striking him with such force as to break both legs below the knees.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART EMERY WHEEL COMPANY, Limited, Hamilton, Ont., Can.

GERMAN METHOD OF DRYING WOOD.

It is generally supposed that wood which has been for some length of time in a drying room, exposed to a heat of from 50° to 60° C. (122° to 140° F.), is perfectly dry and fit for use without there being any fear that it will shrink, split, or bend ; but this supposition is not always correct, as even an expert woodworker may be mistaken as to whether it is perfectly dry or not, unless he knows the exact treatment the wood has received from the time when it was felled in the forest until it left the drying room.

So far it is little known, writes Mr. O. J.D. Hughes, United States Consul at Coburg, that wood which has been floated in rafts or otherwise gives a more reliable joinery and building material than that which has been carried by cart or rail to the sawmill and workshop. While the wood is lying in the water its sap and albuminous and salty substances are—owing to the diffusing effect exercised by the water—dissolved and come out of the pores, the water taking their places. This dissolving process, quite similar to that which takes place during the manufacture of sugar out of cane or beets, will progress more slowly at the ordinary temperature of river water—i.e., at from 12° to 18° C. (52° to 65° F.)—than it would at a higher temperature, but the length of time rafts in Germany usually spend on their journey down rivers is entirely sufficient for this process to take place, even at an unfavorable temperature.

The salty and other substances in the wood, like albumen and wood gum, are hygroscopic —i. e., they eagerly absorb the dampness in the atmosphere, so that apparently wood which has been kept in dry drying rooms for a sufficient length of time is apt to become damp again in the open air unless it has, when floating down the river, gone through the abovementioned diffusing or washing-out process.

With the better qualities of wood a secretion of the hygroscopic substances is brought about artificially in our local drying establishments with the help of a special apparatus. The boards or planks are piled up in a long iron box, with narrow spaces between ; the lid is then tightly screwed down, so that neither water nor steam can escape. Steam is then turned into the box at a continuous pressure of 0.2 or 0.3 atmospheres, and this process is continued for from sixty to seventy-two hours, the exact length of time being determined by the hardness and density of the wood. The steam opens up the wood and kills the protoplasm which is still alive in the cells. After having been thus prepared the wood goes into the water bath, where it is kept for about a fortnight.

The drying process, as practiced here, is about as follows : The boards are loaded on a small cart, leaving small spaces between them by placing narrow strips in position. The cart is then pushed into the first drying room. The size of these rooms differs a good deal ; they are mostly from 20 to 30 meters (66.45 to 84.-25 feet) long, with breadth and height to correspond. The temperature is kept between 50° and 60° C. (122° and 140° F.). Steam or hot-water pipes, placed on one side and underneath the flooring, supply the necessary heat, fresh air being admitted from one side by openings which can be wholly or partially closed by means of slides. At times, when the fresh air does not enter fast enough, exhausters and ventilators are employed. The air, after becoming heated and passing between the layers of wood, becomes saturated with its moisture and is then forced out at the other side of the room by numerous openings or a long slit connected with the outer air by openings leading to the roof.

In most establishments the wood, after having been in the first heating room for a sufficient length of time, is taken right into the workshop. This, however, is not the best method; it is better to have the first drying process followed by a second one in another drying room, which is heated by means of a stove extending its whole breadth, provided with fuel—usually coke—from the outside. The process is then about the following : Each board or plank that comes from drying room No. 1 is given an exact rectangular shape at one end ; it is then loaded on a cart and put into the second drying room, after which the door is closed and any loose places that may become noticeable are filled up with mortar. The fire is then started and brought to a red heat, plenty of air being allowed to pass over the fuel, while the smoke is carried off by regulating outlets, which are provided underneath and beside the cart. After from fifty to sixty hours the cart is taken out and each piece of wood carefully examined as to whether it has kept the exact rectangular shape with which it was provided before being put into the heating room. Those pieces which have kept their shape may be considered as quite dry and ready for use, while the others will be once more cut rectangular at one end and put again into heating room No. 2. On being withdrawn, after about twelve or eighteen hours, every angle is as it should be — consequently, quite dry and in perfect condition for use. Many manufacturers are afraid of the expense and loss of time in connection with this double-drying process as described above, and so they use wood which has been less carefully treated. The natural consequence of this omission is that furniture, etc., manufactured by them will split or bend very soon after having been put to use.

Finally, it must not be forgotten that wood which before being dried has been floated, and thus gone through the wash-out (Auslaugung) process referred to at the beginning of this article, makes very useful timber, as it is less liable than nonfloated wood to be attacked by micro-organisms, the reason for this being that the washed-out wood consists almost exclusively of cellulose and liquose, on neither of which do mold nor bacteriæ thrive. Such timber will require but a slight saturation with an antiseptic solution to become safe from putrefaction and destruction through fungi.

BELTING FOR LUMBERMEN.

The Rossendale Belting Company, Limited, of Manchester, England, have opened a branch at Toronto for the sale of their belting and accessories. In conversation with the manager he said : "We are the only firm of British belt manufacturers having a branch in the Dominion dealing direct with the consumer."

The "Rossendale Hair" belting is specially adapted for the use of lumbermen, in saw or planing mills, and will work under water or in damp or exposed places, in all conditions of weather.

They also carry a stock of the famous "M. A. Y." and "Mayave" belting—the latter a belt made of specially prepared canvas, gutta percha and balata, which, though considerably cheaper, the company guarantee to work satisfactorily on any drive upon which a balata belt has previously given satisfaction.

A 5-inch M. A. Y. solid woven belt ¼ inch thick was tested recently at Walker University, Liverpool, and its breaking load was 12,300 lbs.

The Dominion Exhibition to be held in Toronto from Aug. 27th to Sept. 12th, will be under the direct recognition of the King, the Queen, the Governor-General, the Dominion Parliament, the various provincial governments, and the city and corporation of Toronto.

"THE REEVES"

For Saw or Planing Mill work "The Reeves" Wood Split Pulley is the favorite. A good, strong, durable pulley made honestly and made right.

LEGAL DECISIONS.

McMILLAN V. ORILLIA EXPORT LUMBER CO. —This case was heard in the Trial Court at Osgoode Hall, Toronto. Judgment in action and counterclaim tried at Sault Ste. Marie. After hearing the evidence the learned judge dismissed the counterclaim and all of the plaintiff's claim, except his claim of $184.93, being a sum of money owing by defendants to one James Hurdle, which plaintiff alleged had been assigned to him, as to which judgment was reserved. The facts with regard to it were as follows :—One Hollway was an inspector and salesman for defendants, and before 22nd July, 1902, he had purchased from Hurdle a quantity of timber for defendants, and they were indebted to Hurdle in $184.93 for it. On 22nd July, 1902, Hurdle made out his account against defendants in detail, and at the foot of it signed an ordered, addressed to defendants, "Pay to order of J. W. McMillan (plaintiff), above amount, $184.93." Plaintiff, a few days afterwards, drew on defendants for the full amount of his claim in the present action, $541.46, including the Hurdle claim. This draft was presented to defendants on 1st August, 1902, and they wrote on the same day to plaintiff to say that they could not reconcile the amount with their figures, and to ask for a detailed statement. The plaintiff sent defendants a statement, part of it being "To amount of Jas. Hurdle, order for lumber bought by Hollway, $184.93." The statement was endorsed in a letter to defendants, dated 7th August, 1902, in which plaintiff said :—"I attached a copy of account to draft and also an order which I had from Jas. Hurdle, from whom Mr. Hollway bought oak lumber to the amount of order given me." It appeared from the detailed account of Hurdle against defendants that only $124.80 of the amount was for oak lumber, the balance being for basswood lumber. Held on the evidence, that if Hurdle's order was ever attached to the draft on defendants, it was not so attached at presentation, and the only notice to defendants of its existence was the mention of it in the account which defendants received from plaintiff in the letter of 7th August, and the reference to it in that letter. The order amounts to an equitable assignment of Hurdle's claim against defendants ; Hall v. Prittie, 17 A. R. 306, but plaintiff did not before action give express notice in writing to defendants, so as to give himself the right to sue without joining Hurdle as a party. To enable the assignee to sue alone, the notice must be express notice, and it must be in writing ; there should be nothing equivocal about it, nothing to leave the debtor in doubt as to whether the whole or only a part of it had been absolutely assigned. Therefore, this part of the action must also be dismissed, but without prejudice to the right of plaintiff to bring another action to recover the amount. Two actions were brought upon the different causes of action which were considered at the trial and in the present judgment. These actions were both begun in the District Court of Manitoulin. After issue joined they were consolidated by order, and removed into the High Court, and directed to be tried at Sault Ste. Marie, defendants agreeing to pay the additional witness fees incurred by change of venue from Gore Bay. One of the actions related only to the Hurdle debt. Defendants should recover their costs of defence as if the only action had been one upon the Hurdle claim, and these costs should be taxed on the District Court scale. The costs of the motion to consolidate, etc., should be taxed to them on the High Court scale. Their witness fees should be no greater than if the action had been tried at Gore Bay, and plaintiff may set off the amount of the increased expense of taking his witnesses to Sault Ste. Marie. No order as to the costs of the other causes of action or the counterclaim.

A British Columbia charter has been granted to the Port Renfrew Lumber Company, Limited, the China Creek Lumber Company, Limited, and the Big Bend Lumber Company, Limited.

According to a report from North Bay, the Canadian militia is soon to be augmented by a new regiment recuited from among the hardy river drivers and lumbermen of the North Bay and Parry Sound district. It is expected that an official announcement of the formation of the new corps will shortly be made.

LUMBER

We represent British Columbia firms; dimension, any size up to one hundred feet; for bridging or heavy buildings; finishing in cedar and fir; also shingles; we quote delivered prices to all points; Ontario lumber, lath and shingles; pine culls, hemlock joist, scantling, and boards, shingles, lath, large or small quantities. Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies

are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Linimint No. 1.
A penetrating Alcoholic Linimint. Put up in one gallon jugs, with full directions, per imperial gal. $4.50

Johnson's Horse Linimint No. 2.
A combination of the best oils used as linimints, imp. gallon .. $3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic. Imperial gallon $5.00

Johnson's Veterinary Healing Ointment.
Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each . . $2.00
or in ¼ lb tins, per dozen . . $3.50

Johnson's Condition Powders. (Concentrated).
Put up in bulk, per lb . . . . 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating linimint, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to $100.

INMAN POULSEN & CO.
Oregon Pine Lumber.
Annual Output 75 million feet.

PORTLAND, OREGON, January 8th, 1903.

ZIMMERMAN - WELLS MACHINERY CO.,
Portland, Oregon.

GENTLEMEN, In reference to your inquiry regarding the workings of the Ray Patent Steam Feed purchased from you about eighteen months ago, we have this to say regarding the feed, that it certainly is not only the best feed that we have ever used, but undoubtedly has no equal to-day on the Pacific Coast.

We have dropped as high as twelve 24-ft. 1" boards in one minute. In doing this, the carriage would have to travel about 650 feet and stop and start twenty-four times in one minute. The weight of the carriage, head blocks, and log would be about ten tons. This would give you a pretty good idea of the Power exerted by the feed in handling a load of that size at such a velocity.

We have run this feed night and day since we have had it, continually, and the same ropes are still in service that were put on when the feed was mounted. Everything about the feed seems to be in as good condition to-day as the day we got it. We would not take it out and put back our old feed for ten times the cost of the new one. You will see that we are more than pleased with it.

Yours truly,
INMAN POULSEN & Co.

"Canadian" Over Log Saw Guide

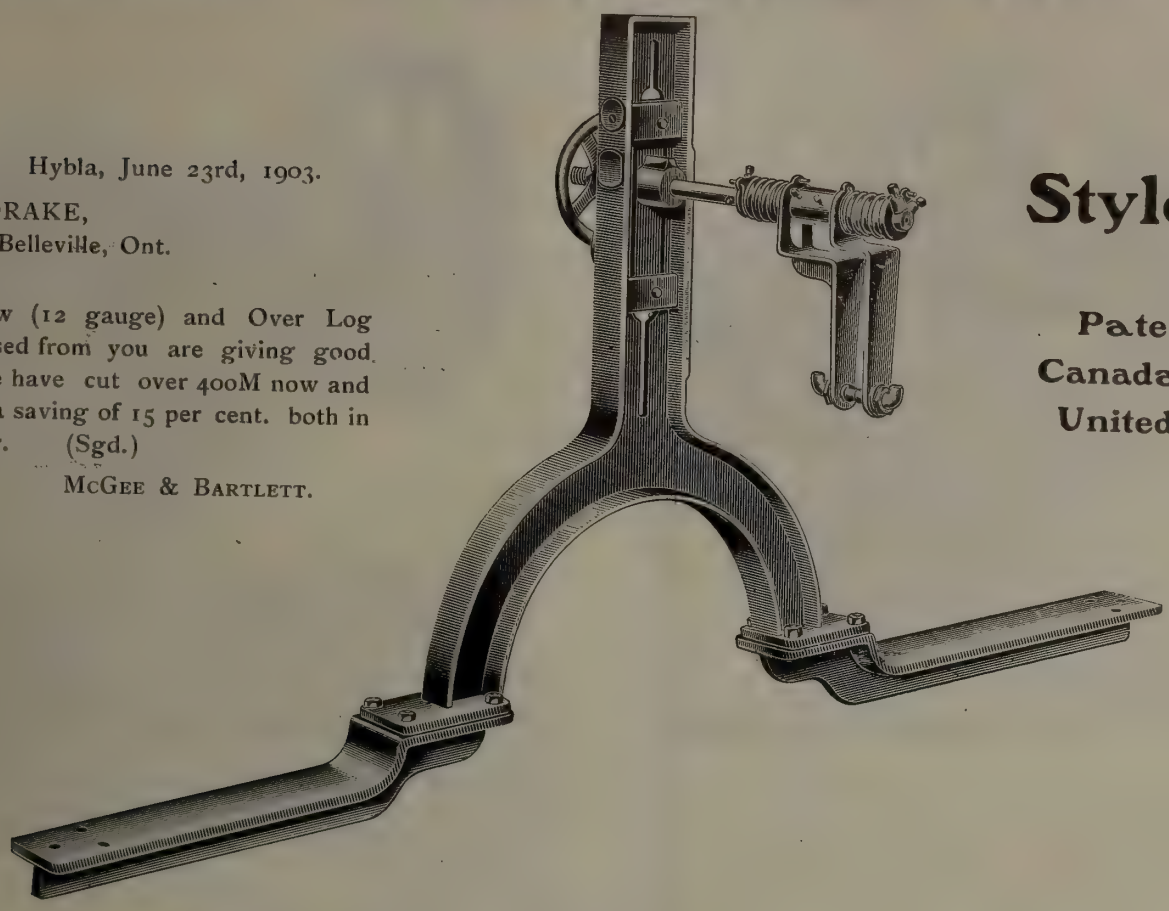
Hybla, June 23rd, 1903.

MR. F. J. DRAKE,
Belleville, Ont.

Dear Sir,—

The Thin Saw (12 gauge) and Over Log Guide we purchased from you are giving good satisfaction. We have cut over 400M now and are sure there is a saving of 15 per cent. both in power and lumber. (Sgd.)

McGee & Bartlett.



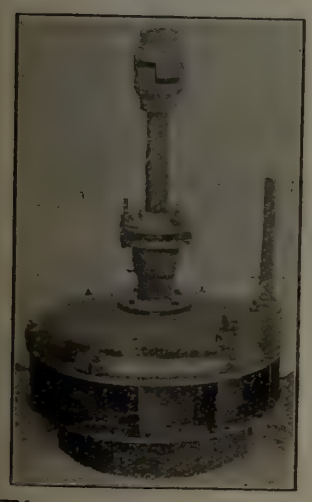
Style "B"

Patented in Canada and the United States

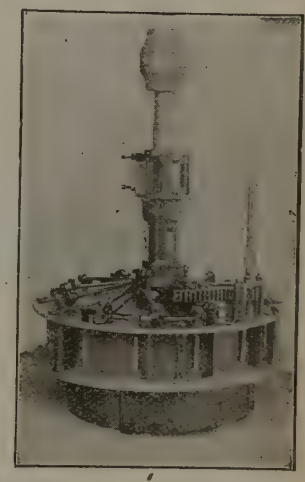
Will keep any saw in a straight and narrow path. Will make more and better lumber.
Write for price and other important particulars.

F. J. DRAKE, - Belleville, Ont.

Do You Need a Turbine?



Now is the best possible time for replacing your old, worn-out wheel with a new Turbine that will save Worry, save Time, and make Money for you. If you want a well built wheel, a wheel that will give you steady reliable power every day, a wheel that will save water, a wheel that will last you a lifetime, and that is sold at a reasonable price, then write us for catalogue and prices on the



Standard Leffel and Vulcan Turbines.

They are better developers to-day than ever before, and are growing in popularity, as our order books show.

We have now for distribution our new **SAW** and **SHINGLE MILL MACHINERY CATALOGUES,** with engravings and descriptions of our machines with their latest improvements. We will be glad to send you one on receipt of your address. You cannot buy a better Portable Mill than the "Lane Improved".

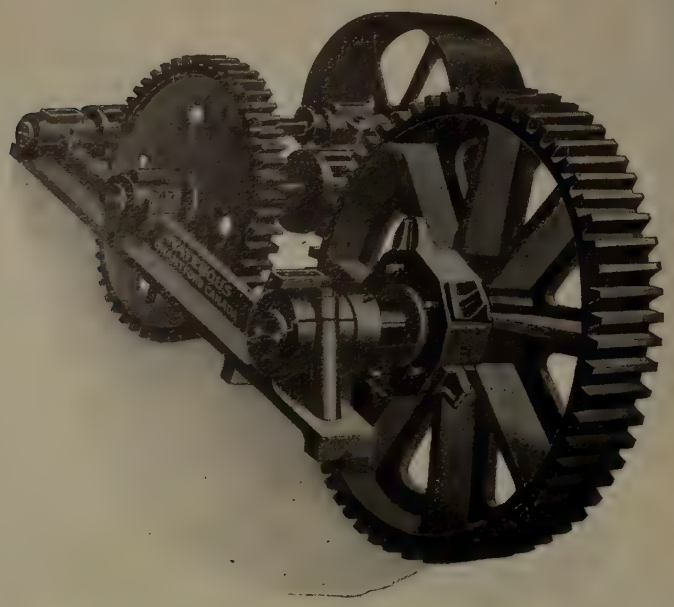
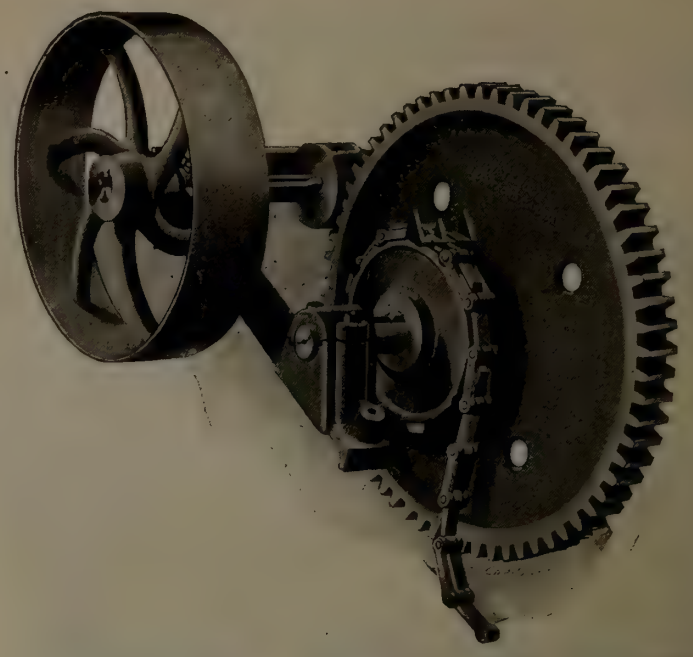
ENDLESS CHAIN BULL-WHEELS OR LOG JACKS



WATEROUS NO. 0 DOUBLE-GEARED LOG JACK

With spur gear to drive from shaft running across mill.

When needed to drive from shaft running lengthwise of mill, we replace smaller spur gears with bevel gears or frictions placed outside of iron frame.



WATEROUS NO. 1 SINGLE-GEARED LOG JACK

With No. 86 log chain. Cast steel spurs and centre links, steel side links, 6" pitch. No. 80 log chain is the same style but heavier with drop forged center links, 8" pitch.

PULLEYS CAN BE READILY REPLACED BY STRAIGHT FACE FRICTIONS.

Cable Chain with Cast Iron Log Spurs

Chilled wearing shoes 4x12" on each side round link. Made 10", 12", 14" wide for 1", 1¼" and 1½" chain. Can't turn on chain.

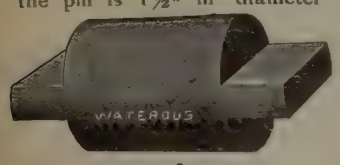
No. 86 Steel Chain (Cast Steel Log Spurs).

Rivets ¾", side bars 1¾x⅝", 8" pitch, center (cast steel) 2¼x6" pitch. Spurs 9" point to point.

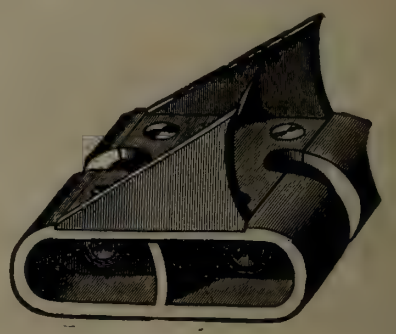
No. 80 Steel Chain

Is 8" pitch similar to above, except that solid link is a drop steel forging, the pin is 1½" in diameter (like illustration) and is fixed in position connecting side bars, presenting a large wearing surface for solid link. Side bars 2x1½'

Taking a safety of 4½" this chain gives a 10,000 lbs. working strain. Log spurs same as No. 86 or of heavy forged steel, any spread desired.



PIN OF NO. 80 CHAIN.

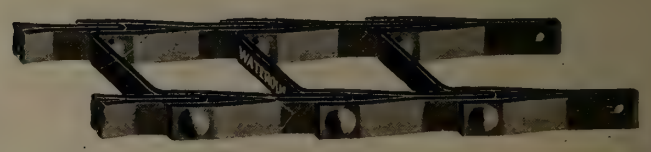


Malleable Log Chains—Detachable, readily applied.

No. 1050 and 1075—Giant Chains, Detachable.

Not recommended for salt water—but there is no better chain for fresh water.

Forged Refuse Chains



R. Double

Outside width 12½ in.—Made of 1½x⅜ in.

The 10 to 15 Tons of Ewart Detachable Link Belting we carry in stock insures prompt shipments.

Save Labor **Save Gumming**
Save Time **Save Files**

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

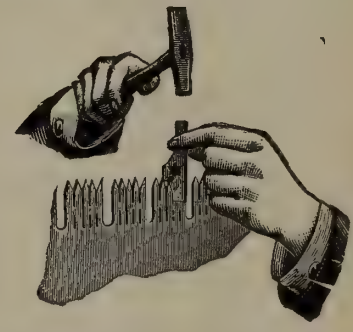
Maple Leaf Saw Set

MANUFACTURED BY

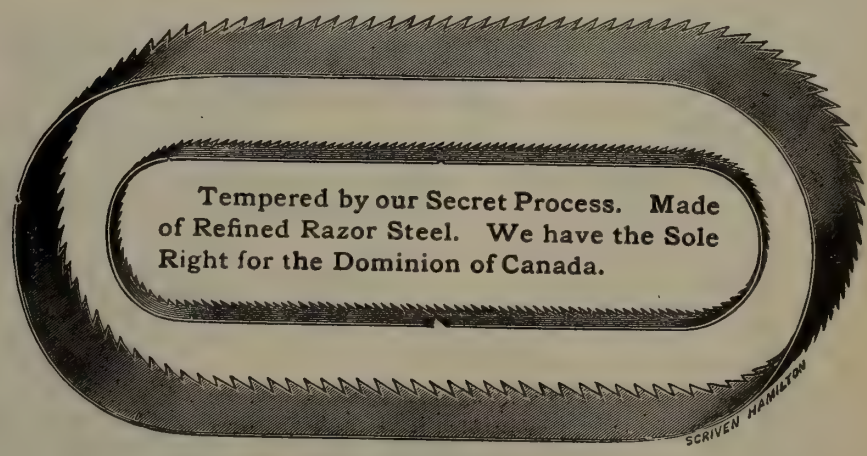
SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**



We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widhs and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

Watson's Portable Air Tight Baker

The most convenient stove ever constructed for use in the Woods, on the Drive, in the Camps. Bakes as perfectly as the finest range.

Read What Experienced Woodsmen Say of it:

"We used your Portable Woods Baker all last season with a crew of men in the woods, travelling from place to place. We found it convenient to handle and the best steel range cannot beat it in baking. It is a perfect baking oven and a success in every way.

The cooking is not affected by rain or weather and can be used outdoors or in a tent."

Yours truly,
MENOMINEE RIVER BOOM CO.,
Per Wm. H. Stephenson, Gen'l Supt.

We make these stoves in three sizes. Our No. 10 will cook for ten men; our No. 20 for twenty men, and No. 50 for from fifty to one hundred persons.

We want those interested in a stove of this kind to write us for full description and prices.
